Subject: Approving a Resolution Adopting an Initial Study/ Negative Declaration for Installation of a Stand-By Emergency Power Generator Project at 1225 R Street and Approving the Project

ISSUE

Whether or not to Approve a Resolution Adopting an Initial Study/Negative Declaration for installation of a Stand-By Emergency Power Generator Project at 1225 R Street and approve the project.

RECOMMENDED ACTION

Adopt Resolution No. 12-07-____, Adopting and Approving an Initial Study/Negative Declaration for the Installation and Operation of a Stand-By Emergency Power Generator At 1225 R Street and Approving the Project.

FISCAL IMPACT

None as a result of this action.

DISCUSSION

In order to provide emergency power to the RT administrative facility at 1225 R Street in case of a power outage, RT proposed to install and operate (as necessary) a stand-by emergency power generator. The emergency generator would be an EPA-certified stationary 175-kW system that would use ultra low-sulfur diesel fuel. The generator would include a 300 gallon above-ground storage tank (AST) for diesel fuel. The generator, AST, and ancillary features would be contained within a weatherproof and sound-attenuated enclosure.

In order to comply with the California Environmental Quality Act (CEQA), an Initial Study was performed to ascertain whether the proposed project may have a significant effect on the environment. On the basis of this study, it was determined that the proposed Stand-By Power Generator will not have any significant effects on the environment and that a Negative Declaration is appropriate.

As the lead agency under CEQA, RT must determine whether the Initial Study/Negative Declaration satisfies the requirements under CEQA. If the Board adopts the Initial Study/Negative Declaration and makes the required findings, the Board may approve the project. RT must file a Notice of Determination within five working days of such approval.

Staff recommends that the Board adopt the attached resolution: 1) adopting an Initial Study/Negative Declaration for a Stand-By Emergency Power Generator at 1225 R Street (Exhibit

A); 2) making the findings required under CEQA; and 3) approving the project and directing the filing of a Notice of Determination.

RESOLUTION NO. 12-07-_____

Adopted by the Board of Directors of the Sacramento Regional Transit District on this date:

July 23, 2012

ADOPTING AND APPROVING AN INITIAL STUDY/NEGATIVE DECLARATION FOR THE INSTALLATION AND OPERATION OF A STAND-BY EMERGENCY POWER GENERATOR AT 1225 R STREET AND APPROVING THE PROJECT

WHEREAS, the Sacramento Regional Transit District (RT) operates an administrative facility at 1225 R Street which is critical to the daily operation of RT services; and

WHEREAS, the 1225 R Street facility does not have a reliable emergency power source in the event of a power outage; and

WHEREAS, RT has identified a need to provide an emergency back-up source of power for continued operations at this location during a power outage; and

WHEREAS, an Initial Study was prepared by and for RT to ascertain whether the installation of an stand-by emergency power generator at 1225 R Street would have a significant effect on the environment; and

WHEREAS, RT consulted with and requested comments on the Initial Study from Responsible Agencies, Trustee Agencies, and other federal, state and local agencies in compliance with CEQA Guidelines; and

WHEREAS, RT provided a Notice of Intent to adopt a Negative Declaration on June 26, 2012; and

WHEREAS, the County Clerk posted the proposed Negative Declaration for at least 20 days.

THEREFORE, BE IT FURTHER RESOLVED, that this Board does hereby adopt the following findings, which this Board finds are supported by substantial evidence in light of the whole record:

A. THAT, an Initial Study has been prepared pursuant to CEQA;

B. THAT, the Initial Study did not identify any potentially significant effects on the environment from the proposed Project;

C. THAT, the Board certifies the Initial Study/Negative Declaration (Exhibit A) has been completed and circulated in compliance with CEQA and is consistent with state and RT guidelines implementing CEQA;

D. THAT, the Board has reviewed and considered the subject Initial Study, the proposed Negative Declaration, all comments received during the public review

period, as well as written and oral comments and other evidence presented by all persons, including members of the public and staff members, who appeared and addressed the board;

E. THAT, the Board has before it all of the necessary environmental information required by CEQA to properly analyze and evaluate any and all of the potential environmental effects of the proposed modifications to the Project;

F. THAT, the Board has reviewed and considered the Initial Study and Negative Declaration which reflects the Board's independent judgment;

G. THAT, the Board finds that there is no substantial evidence in the record that the Project will have a significant effort on the environment.

H. THAT, based on the evidence presented and the records and files herein, the Board determines that the proposed Project will not have a significant effect on the environment.

RESOLVED FURTHER THAT, the Board approves and adopts a Negative Declaration for the installation of a Stand-by Emergency Power Generator at 1225 R Street.

RESOLVED FURTHER THAT, the Board approves the Project and directs staff to file a Notice of Determination within five working days of this approval; and

RESOLVED FURTHER THAT, the Board designates the Assistant General Manager for Engineering and Construction, or his/her designee, located at 1400 29th Street, Sacramento, CA, 95812, as the custodian of the records in this matter.

DRAFT INITIAL STUDY/ NEGATIVE DECLARATION - Exhibit A

1225 R Street Stand-By Power Generator

Sacramento Regional Transit District

June 26, 2012

NEGATIVE DECLARATION

Date of Publication of Initial Study/Negative Declaration: June 26, 2012

Project Title: 1225 R Street Stand-By Power Generator
Lead Agency and Project Sponsor: Sacramento Regional Transit District
Lead Agency Contact Person: Dawn Fairbrother

Address: PO Box 2110, Sacramento, CA 95812
Telephone: (916) 321-3830
E-mail: dfairbrother@sacrt.com

Project Location: Between 1225 R Street and Whittney Avenue
City and County: City of Sacramento, Sacramento County

Project Description: The proposed project is the installation and operation of a stand-by emergency generator. It would be an EPA-certified stationary 175-kW system that would use ultra low-sulfur diesel fuel. The generator would be installed on an approximately 100-sf concrete slab, and would include an above-ground approximately 300-gallon tank for diesel fuel storage. The generator would be tested monthly, on a quarterly basis for one hour, and once annually for a longer period. The generator, fuel tank, and ancillary features would be contained within a weatherproof and sound-attenuated enclosure.

THIS PROJECT WILL NOT HAVE A SIGNIFICANT EFFECT ON THE ENVIRONMENT. This finding is based upon the criteria of the Guidelines of the State Secretary for Resources, Sections 15064 (Determining Significant Effect), 15065 (Mandatory Findings of Significance), and 15070 (Decision to Prepare a Negative Declaration), and the reasons documented in the Environmental Evaluation (Initial Study) for the proposed project, which is attached. No mitigation measures are required.

APPENDIX

I. BACKGROUND

1. **Project Title:** 1225 R Street Stand-By Power Generator

2. **Lead Agency Name and Address:** Sacramento Regional Transit District
   1400 29th Street
   Sacramento, CA 95816

3. **Contact Person, Phone Number, and E-mail**: Dawn Fairbrother
   (916) 321-3830
   dfairbrother@sacrt.com

4. **Project Location:** North of 1225 R Street, south of 13th Street light rail station, along Whittney Avenue, between 12th and 13th streets, downtown Sacramento

5. **Project Sponsor's Name and Address:** Sacramento Regional Transit District
   Dawn Fairbrother
   P.O. Box 2110
   Sacramento, CA 95812

6. **General Plan Designation:** City of Sacramento R Street Corridor Master Plan: Urban Corridor High

7. **Zoning:** RMX-SPD Residential Mixed Use – Special Planning District

8. **Description of Project:** See Section IV, Project Description.

9. **Surrounding Land Uses and Setting**: See Section IV, Project Description.

10. **Other Public Agencies Whose Approval is Required:** See Section IV, Project Description.

II. ENVIRONMENTAL FACTORS POTENTIALLY AFFECTED

The environmental factors checked below would be potentially affected by this project, involving at least one impact that is a "Potentially Significant Impact" as indicated by the checklist on the following pages.

☐ Aesthetics	☐ Agriculture and Forestry	☐ Air Quality
☐ Biological Resources	☐ Cultural Resources	☐ Geology/Soils
☐ Greenhouse Gas Emissions	☐ Hazards and Hazardous Materials	☐ Hydrology/Water Quality
☐ Land Use/Planning	☐ Mineral Resources	☐ Noise
☐ Population/Housing	☐ Public Services	☐ Recreation
☐ Transportation/Traffic	☐ Utilities/Service Systems	☐ Mandatory Findings of Significance

III. DETERMINATION

On the basis of this initial evaluation:

☒ I find that the proposed project COULD NOT have a significant effect on the environment, and a NEGATIVE DECLARATION will be prepared.

☐ I find that although the proposed project could have a significant effect on the environment, there will not be a significant effect in this case because revisions in the proposed project have been made by or agreed to by the applicant. A MITIGATED NEGATIVE DECLARATION will be prepared.

☐ I find that the proposed project MAY have a significant effect on the environment, and an ENVIRONMENTAL IMPACT REPORT is required.

☐ I find that the proposed project MAY have a "potentially significant impact" or "potentially significant unless mitigated" impact on the environment, but at least one effect 1) has been adequately analyzed in an earlier document pursuant to applicable legal standards, and 2) has been addressed by mitigation measures based on the earlier analysis as described on attached sheets. An ENVIRONMENTAL IMPACT REPORT is required, but it must analyze only the effects that remain to be addressed.

☐ I find that although the proposed project could have a significant effect on the environment, because all potentially significant effects (a) have been analyzed adequately in an earlier EIR or NEGATIVE DECLARATION pursuant to applicable standards, and (b) have been avoided or mitigated pursuant to that earlier EIR OR NEGATIVE DECLARATION, including revisions or mitigation measures that are imposed upon the proposed project, nothing further is required.

IV. PROJECT DESCRIPTION

PROJECT LOCATION

The proposed project is located on the north side of RT's Call Center building at 1225 R Street, Sacramento, California, and south of the RT 13th Street light rail station, along Whittney Avenue between 12th and 13th Streets (Figures 1 and 2).

SURROUNDING LAND USES AND SETTING

Adjacent land uses are RT facilities on the south and west, RT light rail tracks and the 13th Street station and offices on the north, residences on the northeast (across 13th Street), and commercial/retail on the south.

PROJECT CHARACTERISTICS

The proposed project is the installation and operation of a stand-by emergency generator to provide power to RT's Call Center at 1225 R Street in case of a power outage affecting the Call Center. It would be an EPA-certified stationary 175-kW system that would use ultra low-sulfur diesel fuel. The generator would include an above-ground approximately 300-gallon tank (AST) for diesel fuel storage. The generator, AST, and ancillary features would be contained within a weatherproof and sound-attenuated (Level 2) enclosure on an at-grade concrete pad.

Landscaping at the project site would be removed and underlying soil prepared for installing a concrete slab. A crane would be used to place the generator and ancillary features on the slab. Minor utility improvements would be necessary to connect the generator into the electrical system that serves the Call Center.

The generator would undergo regular maintenance, which would include testing on monthly and quarterly basis for one hour, and once annually for a longer period. Fuel levels and quality in the AST would also be checked during maintance Fuel that does not meet specifications[1] would be pumped out and replaced with new fuel. The removal of poor quality fuel and replacement would be infrequent, likely no more than once a year.

REQUIRED PERMITS AND COORDINATION

The proposed project is subject to the California Environmental Quality Act (CEQA). RT is the lead agency for the project. As such, RT must oversee environmental review of the project under CEQA, prior to approving the project. An authority to construct/permit to operate (ATC/PTO) would be required from the Sacramento Metropolitan Air Quality Management District (SMAQMD). Permits would be obtained by the vendor selected by RT to install the generator. The vendor would also be required to obtain all necessary permits from the City of Sacramento.

[1] Diesel fuel contains additives and other compounds, including some water, that separate into layers during long periods of inactivity. This degrades the fuel quality.

V. ENVIRONMENTAL CHECKLIST

INTRODUCTION

The following Checklist contains the environmental checklist form from Appendix G of the CEQA Guidelines. The checklist form is used to identify the impacts of the proposed project. A discussion follows each environmental issue identified in the checklist to provide an explanation for how the checklist was filled out. Included in each discussion are project-specific mitigation measures, where appropriate, to reduce potentially significant impacts to less than significant.

For this checklist, the following designations are used:

Potentially Significant Impact: An impact that could be significant, and for which no mitigation has been identified. If any potentially significant impacts are identified, an EIR must be prepared.

Less than Significant With Mitigation Incorporated: An impact that requires mitigation to reduce the impact to a less-than-significant level.

Less-Than-Significant Impact: Any impact that would not be considered significant under CEQA based on established significance thresholds.

No Impact: The project would not have any impact.

Project Site View From North

Project Site View From East

***Source*:** Atkins, 2012.

Figure 3
Street-Level Views

1. AESTHETICS

Would the project:	Significant or Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less-Than-Significant Impact	No Impact
a. Have a substantial adverse effect on a scenic vista?	❑	❑	❑	■
b. Substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings along a scenic highway?	❑	❑	❑	■
c. Substantially degrade the existing visual character or quality of the site and its surroundings?	❑	❑	■	❑
d. Create a new source of substantial light or glare that would adversely affect daytime or nighttime views in the area?	❑	❑	■	❑

Discussion

a,b. **No Impact**. The project site is within a landscaped area RT's 13th Street outbound light rail station and RT's Call Center. Mature non-native ornamental trees and shrubs[2] provide a partial visual buffer between the 13th Street light rail station platform and the approximately 16-foot-high Call Center building (Figure 3). The landscaping and building combined do not exhibit unique aesthetic value. Surrounding land uses are highly urbanized and of similar visual quality. The site is not within a scenic corridor or scenic vista.

c,d. **Less-than-Significant Impact.** The generator and above-ground fuel tank would occupy a footprint of approximately 100 square feet and would be approximately 10 feet high. All features would be within an enclosure for weatherproofing and sound attenuation. While this would alter the visual character of the site, it would blend in with the building behind it, which is taller than the proposed generator enclosure. Thus, it would not substantially contrast with or be visually obtrusive in the context of surrounding land uses. The enclosure would be finished with non-reflective paint, and there would be no nighttime lighting that could contribute to glare or alter night views.

[2] Landscaping consists of non-native, ornamental Chinese pastiche (*Pistacia chinensis*), with a shrub understory of holly (*Ilex sp.*) and pittisporum (*Pittisporum sp.*).

2. AGRICULTURE AND FOREST RESOURCES

Would the project:	Significant or Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less-Than-Significant Impact	No Impact
a. Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use?	❑	❑	❑	■
b. Conflict with existing zoning for agricultural use or conflict with a Williamson Act contract?	❑	❑	❑	■
c. Conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code section 12220(g)), timberland (as defined by Public Resources Code section 4526), or timberland zoned Timberland Production (as defined by Government Code section 51104(g))?	❑	❑	❑	■
d. Result in the loss of forest land or conversion of forest land to non-forest use?	❑	❑	❑	■
e. Involve other changes in the existing environment that, due to their location or nature, could result in conversion of Farmland to non-agricultural use?	❑	❑	❑	■

Discussion

a-e. **No Impact.** There would be no impact on agricultural and timber resources because these resources are not present at the project site or adjoining properties.

3. AIR QUALITY

Would the project:	Significant or Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less-Than-Significant Impact	No Impact
a. Conflict with or obstruct implementation of the applicable air quality plan?	❑	❑	■	❑
b. Violate any air quality standard or contribute substantially to an existing or projected air quality violation?	❑	❑	■	❑
c. Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is a non- attainment area for an applicable federal or state ambient air quality standard (including releasing emissions that exceed quantitative thresholds for ozone precursors)?	❑	❑	■	❑
d. Expose sensitive receptors to substantial pollutant concentrations?	❑	❑	■	❑

Would the project:	Significant or Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less-Than-Significant Impact	No Impact
e. Create objectionable odors affecting a substantial number of people?	❑	❑	■	❑

Discussion

a. **Less-Than-Significant Impact.** The applicable regional air quality plans in effect that apply to RT's network are the Sacramento Metropolitan Air Quality Management District (SMAQMD) State of Progress Plan and 2011 Reasonable Further Progress Plan, both of which address attainment of the federal 8-hour ozone standard. Installation of the generator would generate minor amounts of emissions, but these would be of limited duration and a one-time occurrence. Operation of the generator would occur only during routine maintenance testing and in event of emergency, which would result in only periodic and minimal emissions. For those reasons, the proposed project would not conflict with applicable plans.

b,c. **Less-Than-Significant Impact.** Implementation of the proposed project would result in minor construction and limited operational emissions of criteria air pollutants.

Construction would involve installation of a concrete slab on which the generator and fuel tank would be placed using a crane. This activity is expected to take no longer than a few weeks. According to the SMAQMD CEQA Guidelines[3], if the proposed construction activities are less than identified in the NO_X Construction Screening Level Tables, then the project would not require full quantification of construction emissions. The proposed project, in terms of square footage and acreage, would not meet any of the established screening thresholds that would indicate that construction emissions may exceed SMAQMD-established thresholds. As such, the pollutant amount would be expected to be below the SMAQMD construction threshold of significance of 85 pounds per day for NOx. It should be noted that SMAQMD does not have a threshold of significance for construction ROG because ROG is not normally generated in large amounts during construction activities. With the implementation of the SMAQMD's Basic Construction Emission Control Practices, which would be required in the contract specifications, the proposed project would not exceed NO_X or ROG emissions of 85 lbs/day, and, therefore, would not require full quantification and would be less than significant.

Operational emissions associated with the proposed project would be limited to the periods during which the generator is in operation. This would be during maintenance (which would include routine testing) and for power outage emergencies. Because the proposed project would not create any new uses, but is intended to ensure the adequate provision of backup electrical power for RT's Call Center under emergency conditions, it would not result in energy consumption that would result in indirect air emissions. Other than trips associated with periodic maintenance, the proposed generator would not generate permanent or long-term additional vehicle trips during operation, and, therefore, no substantial mobile source emissions would be anticipated. Further, the proposed generator would comply with Best Available Control

[3] Sacramento Metropolitan Air Quality Management District, CEQA Guidelines, December 2009.

Technology (BACT) and U.S. EPA Tier III standards for emissions. Based on a combined ROG and NO_x emission factor of 3.8 grams/kilowatt-hour and conservatively assuming that on a given day the generator may operate for up to 2 hours during either emergency or maintenance activities, the proposed generator would emit approximately 2.93 lbs/day of ROG and NO_x combined, which is less than the 65 lbs/day operational threshold for ROG and NO_x when considered separately.[4] Further, such operation would occur only intermittently, so actual emissions would be substantially lower on an annualized or long-term basis.

Therefore, because both construction and operational maximum per-day emissions associated with the proposed project would be below SMAQMD thresholds of significance, this would be a less-than-significant impact. No mitigation is required. Given the minimal amount of construction and limited duration of operation when criteria air pollutants would be generated, this would not result in a cumulatively considerable net increase in pollutants.

d. **Less-Than-Significant Impact.** Emissions of CO and PM are identified as localized emissions and have the potential to adversely impact sensitive receptors from the emission of these pollutants in a relatively small area, most notably at congested intersections. As described above, implementation of the proposed project would not result in an increase in vehicles on the roads, thus not impacting intersections.

Diesel particulate matter (DPM) is emitted from the combustion of diesel fuel, which can be used in generators and vehicles. DPM is a toxic air contamination (TAC). Other TACs are also emitted from the combustion of diesel fuel. The proposed project would generate TAC emissions when the generator is tested and used for emergencies. The generator would be a permitted source under the SMAQMD regulations and would be required to comply with all conditions of the permit once obtained. Based on typical permitting requirements, the generator could be operated up to 50 hours per year. The proposed project anticipates a maximum of 28 hours per year; however, because the SMAQMD methodology requires the generator's emissions to be modeled at full usage, the analysis in this document identifies maximum risk potential for the 50-hour operational period.

Using emissions data provided by the generator manufacturer, the ISCST3 model was used to determine the concentration of DPM emissions at nearby receptors.[5] These concentrations were then converted to an anticipated lifetime cancer risk. Based on the modeling, the maximum potential cancer risk to nearby receptors is 5.64 in a million for a 50-hour annual usage. The maximum potential non-cancer risk to nearby receptors is 0.0035 for a 50-hour annual usage.[6]

The SMAQMD thresholds of significance are 10 in a million for cancer risk and 1 for non-cancer risk on both a project level and cumulative basis. Both the 28- and 50-hour annual usage

[4] Emissions model output are included in Appendix A.

[5] While other chemical TACs are emitted, they are emitted in negligible amounts. Because DPM is the greatest contributor to overall TAC risk, and the model assumes a lifetime exposure (which would not occur with an emergency generator used only for testing and emergency operation), the results presented herein are overly conservative.

[6] Emissions model output are included in Appendix A.

scenarios result in emissions below the SMAQMD thresholds. Therefore, emissions from TAC would be less than significant at both a project and cumulative level.

e. **Less-Than-Significant Impact.** During construction of the proposed project, emissions from construction equipment, such as diesel exhaust, and VOCs may create objectionable odors. However, these odors would be temporary in nature and would not affect a substantial number of people. During operation of the proposed generator, odors would be primarily associated with the operation of the generator; however, proper maintenance and BACT would reduce the potential for objectionable odors during operation of the generator.

4. BIOLOGICAL RESOURCES

Would the project:	**Significant or Potentially Significant Impact**	**Less Than Significant With Mitigation Incorporated**	**Less-Than-Significant Impact**	**No Impact**
a. Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service?	❑	❑	❑	■
b. Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, or regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service?	❑	❑	❑	■
c. Have a substantial adverse effect on federally protected wetlands as defined by Section 404 of the Clean Water Act (including, but not limited to, marshes, vernal pools, coastal wetlands, etc.) through direct removal, filling hydrological interruption, or other means?	❑	❑	❑	■
d. Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?	❑	❑	■	❑
e. Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?	❑	❑	❑	■
f. Conflict with the provisions of an adopted habitat conservation plan, natural community conservation plan, or other approved local, regional, or state habitat conservation plan?	❑	❑	❑	■

Discussion

a. **No Impact**. According to a California Natural Diversity Database (CNDDB) query in May 2012, 11 special-status plant and animal species have been observed within the Sacramento East USGS quadrangle: American badger (*Taxidea taxus*), Cooper's hawk (*Accipiter cooperii*), burrowing

owl (*Athene cunicularia*), Swainson's hawk (*Buteo swainsoni*), purple martin (*Progne subis*), bank swallow (*Riparia riparia*), Valley elderberry longhorn beetle (*Desmocerus californicus dimorphus*), vernal pool fairy shrimp (*Branchinecta lynchi*), vernal pool tadpole shrimp (*Lepidurus packardi*), California linderiella (*Linderiella occidentalis*), and Sanford's arrowhead (*Sagittaria sandrodii*). Of these special-status species, only four have the potential to occur within the site. There are some trees on-site[7] that are well-established and could provide suitable nest sites for Cooper's hawk, Swainson's hawk, bank swallow, and purple martin. However, raptor habitat is marginal due to the urban nature of the project site and surroundings and distance from forgaging areas (open grasslands), so the available nesting habitat is unlikely to be used by either of the hawk species. No nest structures or evidence of nesting, such as whitewash, feathers, castings, or prey remains, were observed in any of the trees on the project site during a site visit in May 2012. The only bird species observed on-site was a northern mockingbird (*Mimus polyglottus*). There is no suitable habitat for the other eight species. Therefore, removal of vegetation to accommodate the project would not result in a loss of protected species, habitat, or nests.

b. **No Impact**. There are no riparian habitat or sensitive natural communities at or adjoining the project site.

c. **No Impact.** There are no federally protected wetlands on or in the vicinity of the project site.

d. **No Impact.** The project site is located in a highly urbanized area, where there is no native habitat. The project site has been disturbed by construction of the adjacent building and installation of landscaping. There are no native resident or migratory fish or wildlife species or established native resident or migratory wildlife corridors or nursery sites. The federal Migratory Bird Treaty Act (MBTA) protects all common wild birds found in the United States except the house sparrow, starling, feral pigeon, and resident game birds such as pheasant, grouse, quail, and wild turkey. The MBTA makes it unlawful for anyone to kill, capture, collect, possess, buy, sell, trade, ship, import, or export any migratory bird including feathers, parts, nests, or eggs. In addition, California Fish and Game Code Sections 3503, 3503.5, and 3513 prohibit take of all birds and their active nests, including raptors (birds of prey, such as hawks and owls) and other migratory non-game birds that are protected under the MBTA. As noted above, no nests were observed in any of the trees on the project site. Therefore, removal of vegetation (if any) would not remove any nests.

e. **No Impact**. The proposed project would not involve activities that would conflict with local policies or ordinances protecting biological resources.

f. **No Impact.** There are no approved Habitat Conservation Plans, Natural Conservation Community Plans, or other adopted plans that would apply to the proposed project.

[7] The project site is landscaped. Vegetation is limited to non-native, ornamental Chinese pastiche (*Pistacia chinensis*), with a shrub understory of holly (*Ilex sp.*) and pittisporum (*Pittisporum sp.*).

5. CULTURAL RESOURCES

Would the project:	Significant or Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less-Than-Significant Impact	No Impact
a. Cause a substantial adverse change in the significance of a historical resource as defined in Section 15064.5?	❑	❑	❑	■
b. Cause a substantial adverse change in the significance of an archaeological resource pursuant to Section 15064.5?	❑	❑	❑	■
c. Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?	❑	❑	❑	■
d. Disturb any human remains, including those interred outside of formal cemeteries?	❑	❑	❑	■

Discussion

a-d. **No Impact.** The project site is a landscaped area adjoining a modern building and has been disturbed by urban development. Installation of the generator would not involve removal, modification, or any improvements to existing structures. Minor trenching would be needed to install underground electrical connections, but this would only affect subsurface fill at the project site.

6. GEOLOGY AND SOILS

Would the project:	Significant or Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less-Than-Significant Impact	No Impact
a. Expose people or structures to potential substantial adverse effects, including the risk of loss, injury, or death involving:				
i. Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault? Refer to Division of Mines and Geology Special Publication 42.	❑	❑	❑	■
ii. Strong seismic groundshaking?	❑	❑	❑	■
iii. Seismic-related ground failure, including liquefaction?	❑	❑	❑	■
iv. Landslides?	❑	❑	❑	■
b. Result in substantial soil erosion or the loss of topsoil?	❑	❑	❑	■

Would the project:	Significant or Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less-Than-Significant Impact	No Impact
c. Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction or collapse?	❑	❑	❑	■
d. Be located on expansive soil, as defined in Section 1803.5.3 of the 2010 CBC, creating substantial risks to life or property?	❑	❑	❑	■

Discussion

a-d. **No Impact.** The project site is flat and landscaped. It is not vulnerable to fault rupture, liquefaction and related effects, or slope stability problems. Sacramento is not subject to strong groundshaking, but design specifications for the generator will require the unit meet seismic certification in accordance with industry standards for its intended use and location. The generator enclosure would be placed on a concrete slab designed and constructed to withstand the weight of the generator, taking into account fill that underlies the project site. Other than minor trenching, no earthwork is proposed that would be a source of erosion.

7. GREENHOUSE GAS EMISSIONS

Would the project:	Significant or Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less-Than-Significant Impact	No Impact
a. Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?	❑	❑	■	❑
b. Conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emissions of greenhouse gases?	❑	❑	■	❑

Discussion

a, b. **Less-than-Significant Impact.** Greenhouse gas (GHG) emissions would be generated by the combustion of diesel fuel used in the emergency back-up generator. The generator is expected to be operated up to 28 hours per year. However, the generator would be required to be permitted by the SMAQMD, and the SMAQMD permit allows up to 50 hours of operation per year. Therefore, GHG emissions were conservatively estimated as if the generator would operate for the full 50 hours. SMAQMD methodology requires the construction emission to be combined with the operational emission to provide a combined annual emission. The methodology assumes that a project's lifetime is 40 years; therefore, the construction emissions are amortized over 40 years before being combined with the operational emissions.

The proposed project would result in 2.31 metric tons of carbon dioxide equivalents per year (MT CO_2e/year).[8] The SMAQMD does not have a quantitative threshold for determining significance of a project's emissions. However, the BAAQMD has a threshold of 1,100 MT CO_2e annually below which a project would be considered to be less than significant. The proposed project emissions are well below this threshold. Therefore, the proposed project would result in a less-than-significant impact for GHG emissions generation, when both construction and operations are considered together. Further, because the generator is not implementing any new land uses or increasing vehicle miles traveled, and it would operate only during maintenance testing and in case of emergency, it would result in a minimal annual contribution to cumulative GHGs that would not be cumulatively considerable or conflict with applicable plans or regulations.

8. HAZARDS AND HAZARDOUS MATERIALS

Would the project:	Significant or Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less-Than-Significant Impact	No Impact
a. Create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?	❑	❑	■	❑
b. Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?	❑	❑	■	❑
c. Emit hazardous emissions or involve handling hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school?	❑	❑	■	❑
d. Be located on a site that is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?	❑	❑	❑	■
e. Be located within an airport land use plan area or, where such a plan has not been adopted, be within two miles of a public airport or public use airport, and result in a safety hazard for people residing or working in the project vicinity?	❑	❑	❑	■
f. Be located within the vicinity of a private airstrip and result in a safety hazard for people residing or working in the project vicinity?	❑	❑	❑	■
g. Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?	❑	❑	❑	■
h. Expose people or structures to a significant risk of loss, injury, or death involving wildland fires, including where wildlands are adjacent to urbanized areas or where residences are intermixed with wildlands?	❑	❑	❑	■

[8] Emissions model output are included in Appendix A.

Discussion

a, b. **Less-Than-Significant Impact.** The generator would be powered by diesel fuel, which would be stored in an adjacent above-ground storage tank (AST) with a capacity of 300 gallons. Diesel is a flammable material regulated under existing hazardous material management regulations and State and local Fire Code regulations. RT is required to comply with all applicable hazardous materials management laws and regulations, which minimizes potential risks during day-to-day operations, and reduces risk for upset or accident conditions. The storage of diesel and transportation of diesel to the site, along with the generation of small amounts of waste oil and lubricants from the generator, have the potential increase risks to the public and environment. However, such risks would be minimal and would not present a substantial hazard, as described below.

The AST that would contain diesel fuel would be double-walled and insulated that would conform to National Fire Protection Association (NFPA) standards for protected steel tanks. The tank would consist of a top-fill system with overfill prevention and spill containment, emergency vent and secondary containment monitoring port, fire extinguisher, and fuel spill countermeasures kit.

Hazardous materials used and stored in larger quantities (i.e., greater than 55 gallons for liquids, 500 pounds for solids, or 200 cubic feet for gases) are subject to Hazardous Materials Management Plan (HMMP) reporting under Section 25503.3(c) of the California Health and Safety Code. The proposed quantity of diesel to be stored in the AST would be subject to HMMP reporting. The HMBP identifies the location of the AST, and the information in the HMBP is readily available to the City of Sacramento Fire Department in case of emergency. In addition, the Sacramento County Environmental Management Department (SCEMD) – as the Certified Unified Program Agency (CUPA) – has monitoring and enforcement authority for ensuring the AST is maintained in accordance with hazardous materials regulations. SCEMD will inspect the tank as required by law.

Fuel in the AST would be tested during routine maintenance for level and quality. If the fuel does not meet specifications, the portion of the fuel not meeting specifications would be pumped out, and new fuel would be added. Waste fuel would be removed by licensed vendor and transported for disposal at a permitted facility to accept hazardous waste. The removal of waste fuel and refueling would be infrequent, no more than once a year. As a result, the amount of hazardous waste would be minimal, and the volume of fuel transported to the site and transferred to the generator would also be minimal, which would minimize the risk of upset or accident conditions.

However, in the unlikely event of a spill or release on-site of 42 gallons or more, in accordance with federal regulations, RT is responsible for notifying SCEMD and the California Emergency Management Agency (Cal EMA). In addition, the City of Sacramento Fire Department provides fire protection and hazardous materials incident response. There are two fire stations within a mile of the site. The closest station (Station 1 at 624 Q Street) is 0.6 miles from the site. The next closest station (Station 5 at 731 Broadway) is 1 mile from the site.

c. **Less-Than-Significant Impact.** There are no public or private schools located within ¼ mile of the project site, but there are two day-care centers. Operation of the generator would result in TAC emissions, as identified in Item 3d, but the potential impacts at any single receptor would be miniscule, and would not pose a health risk to sensitive receptors such as the day care centers, as explained in Item 3d.

d. **No Impact.** The project site is not included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5.[9]

e, f. **No Impact.** The project site is not within a public airport land use plan. Helicopter operations at the UC Davis Medical Center, a few miles away, would not be affected by the project location or operation.

g. **No Impact.** The proposed project is intended to provide backup power for RT's system in the event of emergency to allow administrative functions and light rail operation to function in an emergency, which would be a benefit of the project. During installation of the generator, equipment would be situated so that it would result in minimal disruption to the adjacent light rail line, which does not provide public roadway access.

h. **No Impact.** The project site is in an urbanized area of Sacramento that is not adjacent to wildland areas where high fire hazard potential exists.

9. HYDROLOGY AND WATER QUALITY

Would the project:	Significant or Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less-Than-Significant Impact	No Impact
a. Violate any water quality standards or waste discharge requirements?	❑	❑	❑	■
b. Substantially deplete groundwater supplies or interfere substantially with groundwater recharge, resulting in a net deficit in aquifer volume or a lowering of the local groundwater table level (e.g., the production rate of pre-existing nearby wells would drop to a level that would not support existing land uses or planned uses for which permits have been granted)?	❑	❑	❑	■
c. Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river, in a manner that would result in substantial erosion or siltation onsite or offsite?	❑	❑	❑	■

[9] California Department of Toxic Substances Control, Envirostor. Search criteria: R Street, Sacramento, California. http://www.envirostor.dtsc.ca.gov/public/. May 2012.

Would the project:	Significant or Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less-Than-Significant Impact	No Impact
d. Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river, or substantially increase the rate or amount of surface runoff in a manner that would result in flooding onsite or offsite?	❑	❑	❑	■
e. Create or contribute runoff water that would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff?	❑	❑	❑	■
f. Otherwise substantially degrade water quality?	❑	❑	❑	■
g. Place housing within a 100-year flood hazard area, as mapped on a federal Flood Hazard Boundary or Flood Insurance Rate Map or other flood hazard delineation map?	❑	❑	❑	■
h. Place structures within a 100-year flood hazard area that would impede or redirect flood flows?	❑	❑	❑	■
i. Expose people or structures to a significant risk of loss, injury, or death involving flooding, including flooding as a result of the failure of a levee or dam?	❑	❑	❑	■
j. Contribute to inundation by seiche, tsunami, or mudflow?	❑	❑	❑	■

Discussion

a,f. **No Impact.** The proposed project would not generate any discharges subject to water quality regulations or permits, or otherwise contribute pollutants that could degrade water quality. As described in Item 8a, the generator would include secondary containment features to ensure fuel leaks, if any, would be contained so that they do not enter the storm drain system, which drains to the Sacramento River.

b. **No Impact.** The proposed project would not involve groundwater use and would not affect recharge potential. There would be no effect on groundwater supplies.

c,d. **No Impact.** The proposed project would have no effect on drainage patterns, erosion/siltation potential, or cause or exacerbate on- or off-site flooding due to its distant location relative to surface water bodies and minimal footprint.

e. **No Impact.** There would be no changes to the existing rate and amount of stormwater entering local drainages and the stormwater drain system that could affect capacity as a result of the project.

g, h. **No Impact.** The proposed project would not place housing in special flood hazard areas, and it would not redirect or impede flood flows because no physical changes in flood-prone areas are proposed.

i. **No Impact.** The project site is in an area protected from flooding by levees along the Sacramento and American rivers and Nimbus and Folsom dams. While flood risk does exist at the project site, this is an existing condition that would not change as a result of the project, and there are no aspects of the project that would alter inundation areas.

j. **No Impact.** The project site is not located near an ocean coast or enclosed body of water that could produce a seiche. It is not located near areas having steep slopes that would create mudflows.

10. LAND USE AND PLANNING

Would the project:	Significant or Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less-Than-Significant Impact	No Impact
a. Physically divide an established community?	❑	❑	❑	■
b. Conflict with any applicable land use plan, policy, or regulation of an agency with jurisdiction over the project (including, but not limited to, a general plan, specific plan, local coastal program, or zoning ordinance) adopted for the purpose of avoiding or mitigating an environmental effect?	❑	❑	❑	■
c. Conflict with any applicable habitat conservation plan or natural community conservation plan?	❑	❑	❑	■
d. Result in land use/operational conflicts between existing and proposed on-site or off-site land uses?	❑	❑	❑	■

Discussion

a. **No Impact.** The project site is a landscaped area between RT's 13th Street station and RT's Call Center. This would not involve land use changes that would divide an established community.

b. **No Impact.** The project site is within the R Street Corridor Master Plan. The land use designation is urban corridor high, and the zoning is RMX-SPD (residential mixed use – special planning district). The land use plans and policies and zoning regulations prescribe development standards for mixed uses, such as floor area, density, height, and setbacks for such development, among other items. The analysis provided in this checklist concludes the proposed project would not result in any significant environmental effects that would conflict with applicable land use plans, polices, or regulations of any agency with jurisdiction over the project. Further, RT would be required to obtain all necessary permits from the City of Sacramento to construct and operate the generator to ensure it meets City requirements concerning utility connections and public safety.

c. **No Impact.** There is no applicable habitat conservation plan or natural community conservation plan.

d. **No Impact.** The proposed project is situated in a fully developed urban environment within RT existing facilities and is consistent with existing light rail operations and surrounding land use context. It would not be a substantial source of noise or air emissions, create a public safety risk, or cause an adverse change in the visual environment. Therefore, it would not result in land use or operational conflicts on- or off-site.

11. MINERAL RESOURCES

Would the project:	Significant or Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less-Than-Significant Impact	No Impact
a. Result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state?	❑	❑	❑	■
b. Result in the loss of availability of a locally important mineral resource recovery site delineated on a local general plan, specific plan, or other land use plan?	❑	❑	❑	■

Discussion

a, b. **No Impact.** The availability of mineral resources would not be affected by the proposed project because there are no mineral resources at the project site.

12. NOISE

Would the project:	Significant or Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less-Than-Significant Impact	No Impact
a. Exposure of persons to or generation of noise levels in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?	❑	❑	■	❑
b. Expose persons to or generate excessive groundborne vibration or groundborne noise levels?	❑	❑	■	❑
c. Result in a substantial permanent increase in ambient noise levels in the project vicinity above levels existing without the project?	❑	❑	■	❑
d. Result in a substantial temporary or periodic increase in ambient noise levels in the project vicinity above levels existing without the project?	❑	❑	■	❑
e. Be located within an airport land use plan area, or, where such a plan has not been adopted, within two miles of a public airport or public use airport and expose people residing or working in the project vicinity to excessive noise levels?	❑	❑	❑	■

Would the project:	Significant or Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less-Than-Significant Impact	No Impact
f. Be located in the vicinity of a private airstrip and expose people residing or working in the project vicinity to excessive noise levels?	❑	❑	❑	■

Discussion

Existing measured noise levels at the nearest residential property are presented in Table 1, which demonstrate the existing ambient noise level in the vicinity of the project site is already high (73 dBA).

TABLE 1

EXISTING NOISE LEVELS WITHIN AND AROUND THE PROJECT SITE

No	Location	Time of Day	Observed Primary Sources of Noise	Noise Level Statistics		
				L_{eq} (dBA)	L_{min} (dBA)	L_{max} (dBA)
1	At proposed generator location	1:57 pm	Light Rail (warning bells, approach, braking, speaker announcements, depart) HVAC, platform noise (people talking loudly)	73.8	59.6	89.0
2	At residential property line adjacent to (northeast of) project site: 1714 13th St - backyard	2:14 pm	Light Rail (warning bells, approach, braking, speaker announcements, depart) HVAC, platform noise (people talking loudly)	73.1	60.2	84.4

Notes: Measurements taken between 10:30 and 11:30 AM on January 28, 2010.
Source: Atkins, 2012.

The applicable noise standards for evaluating the proposed project are:

City of Sacramento Noise Ordinance. The City of Sacramento Noise Control Ordinance, found in the Sacramento Municipal Code Title 8 – Health and Safety, Chapter 8.68, sets limits for exterior noise levels on designated residential property. The ordinance states that noise shall not exceed 55 dBA ("A-weighted decibels")[10] during any cumulative 30-minute period in any hour during the day (7:00 a.m. to 10:00 p.m.), and 50 dBA during any cumulative 30-minute period in any hour during the night (10:00 p.m. to 7:00 a.m.). The ordinance sets somewhat higher noise limits for noise of shorter duration; however, noise shall never exceed 75 dBA in the day and 70 dBA at night. Construction activities are conditionally exempt from the Noise Ordinance, subject to certain limitations.

City of Sacramento General Plan. The City of Sacramento General Plan Environmental Constraints Noise section has established Goals and Policies relating to evaluating noise impacts

[10] The A-weighted decibel scale (dBA) is an industry convention that specifically relates noise to human sensitivity because humans are not equally sensitive to a given sound level at all frequencies. The A-weighted decibel scale does this by placing more importance on frequencies that are more noticeable to the human ear.

due to projects. The noise reduction goal for the City is to minimize noise impacts on human activity to ensure the health and safety of the community. The City of Sacramento General Plan (2009) policies establish interior and exterior noise standards for land use compatibility and allowable exterior incremental noise standards for projects that would increase existing noise levels that would require mitigation measures when the allowable noise level increment is exceeded (General Plan Environmental Constraints Table EC2). For the measured ambient noise environment at the project site (73 dBA, see Table 1, above), the applicable exterior incremental noise impact standard is an increase of 1 dBA. The City also requires projects to mitigate operational noise impacts to adjacent noise sensitive uses when operational noise thresholds contained in the City of Sacramento Noise Ordinance are exceeded.

a. **Less-Than-Significant Impact.** Temporary, intermittent elevated noise levels would occur on and near the proposed project site during the construction phase that could affect nearby sensitive receptors. The mix of equipment operating would vary depending on the activity being conducted on-site and noise levels would vary based on the amount of equipment in operation and the location of the activity. Reference data illustrate that operation of anticipated on-site construction equipment (cement truck, crane) would result in noise levels between approximately 75 A-weighted decibels (dBA) and 100 dBA when measured 50 feet from the source. The closest noise-sensitive receptors are single-family residences approximately 120 feet northeast. Assuming a noise reduction of approximately 3 dBA for every doubling of distance from the source, construction noise could be experienced at these receptors. However, as required by Section 8.68.080(E) of the City Code, construction activities would be limited to occur only between the hours of 7:00 A.M. and 6:00 P.M., Monday through Saturday, and 9:00 A.M. and 6:00 P.M. on Sundays and public holidays. Section 8.68.080(E) also requires the use of exhaust and intake silencers for internal combustion engines used during construction to reduce noise levels associated with construction activities. These restrictions would be included in contract specifications.

Operational noise would be limited to noise levels associated with the periodic testing during maintenance, and from peration of the generator itself in an emergency. Figure 4 shows estimated noise levels near the enclosure and off-site. Based on generator specifications, with a Level 2 sound enclosure, and accounting for additional attenuation of noise over distance, noise levels from generator operation would not be expected to exceed 66 dBA at the nearest property line. Figure 4 shows For the measured ambient noise environment at the project site (73 dBA), the applicable exterior incremental noise impact standard is an increase of 1 dBA. The noise levels from generator operation would contribute to ambient noise levels, but it would not exceed the allowable threshold of 1 dBA established by the City of Sacramento General Plan. It also would not result in an increase in noise levels that would be considered readily discernible (i.e. more than 3 dBA).

Further, it should be noted that the generator would not be run on a continuing basis, only periodically for maintenance, (which would include testing), and, when necessary, during a power emergency affecting the Call Center. Therefore, the proposed project is not expected to generate a substantial temporary or periodic increase in ambient noise at sensitive receptors.

100027974 | 1225 R Street Emergency Generator

Figure 4

Generator Operation Noise Level Contours

ATKINS

b. **Less-Than-Significant Impact.** Installation of the concrete pad and placing the generator and AST enclosure on the pad could expose nearby off-site noise-sensitive receptors to elevated levels of groundborne vibration. Based on FTA's Transit Noise and Vibration Impact Assessment (2006) reference vibration levels for a heavy truck (86 VdB at 25 feet) and the existing distance to adjacent sensitive receptors from the project site (approximately 120 feet), groundborne vibration associated from installation equipment would attenuate to 70 VdB at the nearest sensitive receptor. The FTA identifies a vibration level of 72 VdB to be the level where residences where people normally sleep would be impacted. Equipment installation activites would occur during the daytime and would be below the vibration level FTA criteria. Therefore, equipment used to install the generator would not be considered substantial or excessive.

Operation of the proposed generator would occur periodically at the project site and within a developed area that is subject to regular light-rail activity. As such, potential vibration associated within the proposed generator would not be considered substantial or occur over larger periods of time. Further, the proposed project would be designed in accordance with National Electrical Manufacturers Association (NEMA) standards. As such, the proposed generator is not anticipated to result in excessive vibration at the nearest sensitive receptors (single-family homes along 13th Street).

c. **Less-Than-Significant Impact.** The long-term operation of the proposed project would consist only of periodic maintenance, testing, and only in case of emergency. It would not be a continuous or permanent source of noise. Noise increases would not be considered substantial. Therefore, impacts would be less than significant.

d. **Less-Than-Significant Impact.** The proposed project would have a less-than-significant impact associated with a temporary or periodic increase in ambient noise levels in the proposed project vicinity. As discussed above, noise generated during installation of the equipment could create temporary or periodic increases in ambient noise levels. However, construction work hours are restricted by provisions in the Municipal Code.

e, f. **No Impact.** The proposed project is an unoccupied non-residential use, and no people would be exposed to aircraft noise.

13. POPULATION AND HOUSING

Would the project:	Significant or Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less-Than-Significant Impact	No Impact
a. Induce substantial population growth in an area, either directly (e.g., by proposing new homes and businesses) or indirectly (e.g., through extension of roads or other infrastructure)?	❑	❑	❑	■
b. Displace a substantial number of existing housing units, necessitating the construction of replacement housing elsewhere?	❑	❑	❑	■

c. Displace a substantial number of people, necessitating the construction of replacement housing elsewhere?	❑	❑	❑	■

Discussion

a. **No Impact.** The proposed project would not result in an increase in population that would result in the need for new housing or require the extension of infrastructure.

b, c. **No Impact.** The proposed project would not displace people or housing.

14. PUBLIC SERVICES

Would the project:	Significant or Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less-Than-Significant Impact	No Impact
Result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities or a need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times, or other performance objectives for any of the following public services:				
a. Fire protection?	❑	❑	■	■
b. Police protection?	❑	❑	❑	❑
c. Schools?	❑	❑	❑	■
d. Parks?	❑	❑	❑	■
e. Other public facilities?	❑	❑	❑	■

Discussion

a. **Less-than-Significant Impact.** The project would include an above-ground diesel fuel storage tank. In the unlikely event of a spill or fire, the City of Sacramento Fire Department could provide response services from Station 1 (624 Q Street, 0.6 miles away) or Station 5 (731 Broadway, 1 mile away). However, given the small volume of stored fuel and operational characteristics of the generator, no additional fire protection services would be required that would result in the need for additional fire facilities.

b,e. **No Impact.** The proposed project would not require increased police protection because RT provides its own security for its facilities.

c,d. **No Impact.** The proposed project would not result in a population increase that would require schools or parks.

15. RECREATION

Would the project:	Significant or Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less-Than-Significant Impact	No Impact
a. Increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?	❑	❑	❑	■
b. Include recreational facilities or require the construction or expansion of recreational facilities that might have an adverse physical effect on the environment?	❑	❑	❑	■

Discussion

a, b. **No Impact**. The proposed project would have no impact on recreational facilities because there are no facilities at the site, and the project would not increase the demand for facilities.

16. TRANSPORTATION/TRAFFIC

Would the project:	Significant or Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less-Than-Significant Impact	No Impact
a. Conflict with an applicable plan, ordinance or policy establishing measures of effectiveness for the performance of the circulation system, taking into account all modes of transportation including mass transit and non-motorized travel and relevant components of the circulation system, including but not limited to intersections, streets, highways and freeways, pedestrian and bicycle paths, and mass transit?	❑	❑	❑	■
b. Conflict with an applicable congestion management program, including, but not limited to level of service standards and travel demand measures, or other standards established by the county congestion management agency for designated roads or highways?	❑	❑	❑	■
c. Result in a change in air traffic patterns, including either an increase in traffic levels or a change in location that results in substantial safety risks?	❑	❑	❑	■
d. Substantially increase hazards because of a design feature (e.g., sharp curves or dangerous intersections or incompatible uses (e.g., farm equipment)?	❑	❑	❑	■
e. Result in inadequate emergency access?	❑	❑	❑	■

Would the project:	Significant or Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less-Than-Significant Impact	No Impact
f. Conflict with adopted policies, plans or programs regarding public transit, bicycle, or pedestrian facilities, or otherwise decrease the performance or safety of such facilities?	❑	❑	❑	■

Discussion

a,b. **No Impact.** The proposed project is the construction and operation of an emergency generator located on RT property, which would not conflict with any plan, ordinance or policy establishing measures of effectiveness for the performance of the circulation system, congestion management program.

c. **No Impact.** The proposed project would not result in a change in air traffic patterns. See Item 9e.

d. **No Impact.** The project site is situated between RT's 13th Street light rail station and an RT building. Construction and operation of the generator would not increase hazards because of a design feature.

e. **No Impact.** See Item 9g.

f. **No Impact.** There are no adopted policies, plans or programs regarding public transit, bicycle, or pedestrian facilities that apply to the proposed project.

17. UTILITIES AND SERVICE SYSTEMS

Would the project:	Significant or Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less-Than-Significant Impact	No Impact
a. Exceed wastewater treatment requirements of the applicable Regional Water Quality Control Board?	❑	❑	❑	■
b. Require or result in the construction of new water or wastewater treatment facilities or expansion of existing facilities, the construction of which could cause significant environmental effects?	❑	❑	❑	■
c. Require or result in the construction of new stormwater drainage facilities or expansion of existing facilities, the construction of which could cause significant environmental effects?	❑	❑	❑	■
d. Have sufficient water supplies available to serve the project from existing entitlements and resources, or would new or expanded entitlements be needed?	❑	❑	❑	■

Would the project:	Significant or Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less-Than-Significant Impact	No Impact
e. Result in a determination by the wastewater treatment provider that serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments?	❑	❑	❑	■
f. Be served by a landfill with sufficient permitted capacity to accommodate the project's solid waste disposal needs?	❑	❑	■	❑
g. Comply with federal, state, and local statutes and regulations related to solid waste?	❑	❑	■	❑

Discussion

a-e. **No Impact.** The proposed project would not generate wastewater, require water, or increase storm flows that would require new facilities. There are no applicable wastewater treatment requirements.

f,g. **Less-Than-Significant Impact.** Construction of the concrete pad and installation of the equipment would result a minor amount of solid waste, which would not affect landfill capacity.

18. OTHER ISSUES (ENERGY)

Would the project:
a. Result in, contribute to, or substantially affect other environmental issues(s)? If so, specify below and evaluate:

Discussion

a. **Less-Than-Significant Impact.** The generator would only operate during testing and in an emergency and would rely on diesel fuel to generate electricity. Minimal amounts of electricity would be used during construction. There would be no substantial long-term or permanent increase in energy demand as a result of the proposed project.

19. MANDATORY FINDINGS OF SIGNIFICANCE

Would the project:	Significant or Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less-Than-Significant Impact	No Impact
a. Does the project have the potential to degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, reduce the number or restrict the range of a rare or endangered plant or animal, or eliminate important examples of the major periods of California history or prehistory?	❑	❑	❑	■
b. Does the project have impacts that are individually limited but cumulatively considerable? ("Cumulatively considerable" means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects.)	❑	❑	❑	■
c. Does the project have environmental effects that will cause substantial adverse effects on human beings, either directly or indirectly?	❑	❑	■	❑

Discussion

a. **No Impact.** The proposed project does not involve any activities that would involve ground-disturbance beyond the top few inches of soil in a landscaped area adjacent to an existing building or alteration of any existing structures at the site. There would be no biological resources or cultural resources impacts.

b. **No Impact.** The proposed project would generate air emissions and GHGs, but the project's contribution would not be cumulatively considerable, and the project would not conflict or obstruct implementation of the applicable air quality plan (Item 3a-b) or laws adopted to address GHG (Item 7). The proposed project would result in negligible noise impacts at the project level (refer to Item 12), and would not contribute to a cumulative impact.

For all other remaining topics, due to the nature of project, the project would have no impact or less-than-significant impact, and, therefore, would not result in cumulatively considerable impacts at the project level for aesthetics, agriculture and forest resources, biological resources, cultural resources, geology and soils, hazards and hazardous materials, hydrology and water quality, land use and planning, mineral resources, population and housing, public services, recreation, utilities and service systems, and energy.

c. **Less-Than-Significant Impact**. There would be no significant adverse effects on human beings. As explained in Items 3 (Air Quality) and 11 (Noise), there would be no substantial increase in air emissions or noise levels as a result of the proposed project. For all other topics, there would be either no impact or a less-than-significant impact.

CONC   URBAN ELEV   DFAULT   MULTYR

                                         ***   MODEL SETUP OPTIONS SUMMARY   ***
- -

**Intermediate Terrain Processing is Selected

**Model Is Setup For Calculation of Average CONCentration Values.

  -- SCAVENGING/DEPOSITION LOGIC --
**Model Uses NO DRY DEPLETION. DDPLETE = F
**Model Uses NO WET DEPLETION. WDPLETE = F
**NO WET SCAVENGING Data Provided.
**NO GAS DRY DEPOSITION Data Provided.
**Model Does NOT Use GRIDDED TERRAIN Data for Depletion Calculations

**Model Uses URBAN Dispersion.

**Model Uses Regulatory DEFAULT Options:
          1. Final Plume Rise.
          2. Stack-tip Downwash.
          3. Buoyancy-induced Dispersion.
          4. Use Calms Processing Routine.
          5. Not Use Missing Data Processing Routine.
          6. Default Wind Profile Exponents.
          7. Default Vertical Potential Temperature Gradients.
          8. "Upper Bound" Values for Supersquat Buildings.
          9. No Exponential Decay for URBAN/Non-SO2

**Model Accepts Receptors on ELEV Terrain.

**Model Assumes No FLAGPOLE Receptor Heights.

**Model Calculates 1 Short Term Average(s) of: 24-HR
    and Calculates ANNUAL Averages

**This Run Includes: 1 Source(s);   1 Source Group(s); and   856 Receptor(s)

**The Model Assumes A Pollutant Type of: PM-10

**Model Set To Continue RUNning After the Setup Testing.

**Output Options Selected:
         Model Outputs Tables of ANNUAL Averages by Receptor
         Model Outputs Tables of Highest Short Term Values by Receptor (RECTABLE Keyword)
         Model Outputs External File(s) of High Values for Plotting (PLOTFILE Keyword)

**NOTE: The Following Flags May Appear Following CONC Values: c for Calm Hours
                                                                m for Missing Hours
                                                                b for Both Calm and Missing Hours

**Misc. Inputs: Anem. Hgt. (m) =   10.00 ;   Decay Coef. =   0.000   ;   Rot. Angle =   0.0
                 Emission Units = GRAMS/SEC   ; Emission Rate Unit Factor =   0.10000E+07
                 Output Units   = MICROGRAMS/M**3

**Approximate Storage Requirements of Model =   1.3 MB of RAM.

**Input Runstream File: SRTGEN.INP
**Output Print File: SRTGEN.OUT
**Detailed Error/Message File: SRTGEN.err
**File for Saving Result Arrays: SRTGEN.sa1
**This Run is Part of a Multi-year Run.
  NOTE: PERIOD Results Are for Current Period Only.
         Short Term Results Are Cumulative Across All Years Processed.
