

Sacramento Regional Transit District

COMBINED QUARTERLY MEETING OF THE RETIREMENT BOARDS FOR THE EMPLOYEES AND RETIREES OF THE SACRAMENTO REGIONAL TRANSIT DISTRICT 9:00 A.M., WEDNESDAY, JUNE 12, 2019 REGIONAL TRANSIT AUDITORIUM 1400 29TH STREET, SACRAMENTO, CALIFORNIA Website Address: www.sacrt.com

(29th St. Light Rail Station/Bus 38, 67, 68)

<u>MEETING NOTE:</u> This is a joint and concurrent meeting of the five independent Retirement Boards for the pension plans for the employees and retirees of the Sacramento Regional Transit District. This single, combined agenda designates which items will be subject to action by which board(s). Members of each board may be present for the other boards' discussions and actions, except during individual closed sessions.

ROLL CALL	ATU Retirement Board:	Directors: Li, Kennedy, Niz, McGee Lee Alternates: Jennings, Lucien
	IBEW Retirement Board:	Directors: Li, Kennedy, Ohlson, Bibbs Alternates: Jennings, McCleskey
	AEA Retirement Board:	Directors: Li, Kennedy, Devorak, Robison Alternates: Jennings, McGoldrick
	AFSCME Retirement Board:	Directors: Li, Kennedy, Parks, Guimond Alternates: Jennings, Thompson
	MCEG Retirement Board:	Directors: Li, Kennedy, Thorn, Norman Alternates: Jennings, Flores

PUBLIC ADDRESSES BOARD ON MATTERS ON CONSENT AND MATTERS NOT ON THE AGENDA

At this time the public may address the Retirement Board(s) on subject matters pertaining to Retirement Board business listed on the Consent Calendar, any Closed Sessions or items not listed on the agenda. Remarks may be limited to 3 minutes subject to the discretion of the Common Chair. Members of the public wishing to address one or more of the Boards may submit a "Public Comment Speaker Card" to the Assistant Secretary. While the Retirement Boards encourage your comments, State law prevents the Boards from discussing items that are not set forth on this meeting agenda. The Boards and staff take your comments very seriously and, if appropriate, will follow up on them.

RECONVENE IN OPEN SESSION CLOSED SESSION REPORT ADJOURN

NOTICE TO THE PUBLIC

It is the policy of the Boards of Directors of the Sacramento Regional Transit District Retirement Plans to encourage participation in the meetings of the Boards of Directors. At each open meeting, members of the public shall be provided with an opportunity to directly address the Board on items of interest to the public that are within the subject matter jurisdiction of the Boards.

This agenda may be amended up to 72 hours prior to the meeting being held. An agenda, in final form, is located by the front door of Regional Transit's building at 1400 – 29th Street and posted to SacRT's website at www.sacrt.com.

Any person(s) requiring accessible formats of the agenda or assisted listening devices/sign language interpreters should contact the Human Resources Pension and Retiree Services Administrator at 916-556-0296 or TDD 916/483-4327 at least 72 business hours in advance of the Board Meeting.

Copies of staff reports or other written documentation relating to each item of business referred to on the agenda are on file with the Human Resources Administrative Technician at 916-556-0298 and/or Clerk to the Board of Directors of the Sacramento Regional Transit District and are available for public inspection at 1400 29th Street, Sacramento, CA. Any person who has questions concerning any agenda item may call the Human Resources Administrative Technician of Sacramento Regional Transit District to make inquiry.

Sacramento Regional Transit District ATU Retirement Board Meeting Wednesday, March 20, 2019 MEETING SUMMARY

ROLL CALL

The Retirement Board was brought to order at 9:01 a.m. A quorum was present comprised as follows: Directors Kennedy, Niz and McGee Lee. Alternate Lucien also was present. Director Li and Alternate Jennings were absent.

This meeting was held as a common meeting of the five Sacramento Regional Transit District Retirement Boards.

PUBLIC ADDRESSES BOARD ON MATTERS NOT ON THE AGENDA

None.

CONSENT CALENDAR

12. Motion:	Approving the Minutes for the December 12, 2018 Quarterly Retirement Board Meeting (ATU). (Weekly)
13. Motion:	Approving the Minutes for the January 24, 2019 Special Retirement Board Meeting (ATU). (Weekly)
14. Motion:	Receive and File Administrative Reports for the Quarter Ended December 31, 2018 for the ATU Pension Plan (ATU). (Adelman)
15. Motion	Receive and File the Fiscal Year 2018 State Controller's Report (ATU). (Adelman)
22. Motion:	Receive and File the Independent Auditor's Report for the Twelve Month Period Ended June 30, 2018 (ALL). (Adelman)
23. Motion:	Receive and File Update on Staff Roles and Responsibilities Related to Pension Administration (ALL). (Weekly)

Director Niz moved to adopt ATU Retirement Board Items 12-15, 22 and 23. Director McGee Lee seconded the motion. Items 12-15, 22 and 23 were carried unanimously by roll call vote: Ayes: Directors Kennedy, Niz and McGee Lee. Noes: None.

NEW BUSINESS

24. Resolution: Election of a Chair and Vice Chair for all Common Retirement Board Meetings (ALL). (Weekly)

Pension & Retiree Services Administrator Valerie Weekly presented Item 24 for approval.

Director Niz moved to approve a resolution appointing Director Kennedy as Common Chair and Director Li as Common Vice Chair. Director McGee Lee seconded the motion. Item 24 was carried unanimously by roll call vote: Ayes: Director Kennedy, Niz and McGee Lee. Noes: None.

25. Resolution: Election of Governing Board Officers of Sacramento Regional Transit District (District) Retirement Plans (ATU, AFSCME, MCEG). (Weekly)

Valerie Weekly presented Item 25 for approval.

Director Niz moved to approve a resolution appointing Director Niz as Chair, Director McGee Lee as Vice Chair and Director Li as Secretary. Director McGee Lee seconded the motion. Item 25 was carried unanimously by roll call vote: Directors Kennedy, Niz and McGee Lee. Noes: None.

26. Information: Investment Performance Review by BMO Pyrford for the ATU, IBEW and Salaried Funds for the International Large Capital Equity Asset Class for the Quarter Ended December 31, 2018 (ALL). (Adelman)

Sacramento Regional Transit District Treasury Controller Jamie Adelman introduced John Mirante from BMO Pyrford, who provided the performance results for the International Large Capital Equity Asset Class for the Quarter Ended December 31, 2018 and was available for questions.

27. Information: Investment Performance Review by Met West for the ATU, IBEW and Salaried Funds for the Domestic Fixed Income Asset Class for the Quarter Ended December 31, 2018 (ALL). (Adelman)

Jamie Adelman introduced Jamie Franco from Met West, who provided the performance results for the Domestic Fixed Income Asset Class for the Quarter Ended December 31, 2018 and was available for questions.

28. Motion Receive and File Investment Performance Results for the ATU, IBEW and Salaried Employee Retirement Plans for the Quarter Ended December 31, 2018 (ALL). (Adelman)

Jamie Adelman introduced Uvan Tseng with Callan LLC, who provided the Investment Performance Reports for Quarter Ended December 31, 2018 and was available for questions.

MCEG Director Thorn asked a question about the performance of AQR and the point at which it might make sense to look at changing the allocation being invested with AQR, especially given anticipated volatility in the market. Mr. Tseng advised that with excessive movement, it is difficult to track performance in the short term. Sacramento

Regional Transit District CFO Brent Bernegger asked at what point it would be appropriate to put AQR on watch. Mr. Tseng responded that he would recommend putting an investment manager on watch after three years of underperformance or in case of significant changes to key staffing within the organization.

Ms. Adelman noted that investment managers can be put on watch at any time and for any length of time. Mr. Tseng noted that AQR will be presenting at the next Quarterly Retirement Board Meeting in June.

AEA Retirement Board Director Devorak cautioned that due to the time lag that occurs with changes to investment managers, performance can shift between when a search begins and when the change is implemented.

Director Niz moved to adopt Item 28. Director McGee Lee seconded the motion. Item 28 was carried unanimously by roll call vote: Ayes: Director Kennedy, Niz and McGee Lee. Noes: None.

29. Information: Educational Session on Real Estate Investments Presented by Callan LLC (ALL). (Adelman)

Uvan Tseng introduced Jonathan Gould with Callan LLC, who provided an Educational Session on Real Estate Investments. This was the third and final in a series of three educational presentations made by Callan regarding different asset classes.

In response to Ms. Adelman's question about the range of investments within the "core" products of each type of real estate investment, Mr. Gould explained that typically with "core" products, funds are diversified and investors will have exposure to all of the property types. Mr. Gould also stated that it is typical for institutional real estate investors to have about 75% allocated to "core" products. Mr. Bernegger asked how performance is tracked. Mr. Gould and Mr. Tseng described some differences in how real estate and other types of investment performance can be presented and compared. Ms. Adelman advised that Callan LLC will return in June with a full asset liability study, which will include an opportunity for the Boards to revisit the pension funds' asset allocation.

30. Resolution: Accept the Actuarial Valuation and Approve the Actuarially Determined Contribution Rate for Fiscal Year 2020, for the ATU Employees' Retirement Plan (ATU). (Weekly)

Graham Schmidt, from Cheiron, provided an overview of the Actuarial Valuation Study for Fiscal Year 2020 for ATU employees and was available for questions.

AEA Director Devorak asked about the timing of the Experience Study. Mr. Schmidt stated that the next Experience Study is expected in a year or two.

Ms. Adelman explained the fiscal impact of the setting of the Actuarially Determined Contribution Rate on Sacramento Regional Transit District and provided a chart depicting the changes from Fiscal Year 2019 to Fiscal Year 2020 for each Pension Plan. Ms. Adelman added that this year, the District will have an overall increase in Pension expenses of about \$833K, which is mostly a result of payroll growth. Director Niz requested a copy of Ms. Adelman's chart. Ms. Adelman stated that she would provide the chart to all the members of the five Retirement Boards.

Director Niz moved to adopt Item 30, setting the Actuarially Determined Contribution Rate at 27.78% of payroll. Director McGee Lee seconded the motion. Item 30 was carried unanimously by roll call vote: Ayes: Kennedy, Niz and McGee Lee. Noes: None.

33. Resolution: Authorizing Execution of a Contract or Contract Renewal for Fiduciary Insurance for All Retirement Boards and Approving Delegation of Authority for Renewals (ALL). (Weekly)

Valerie Weekly presented Item 33 for approval and explained why the timing for receipt of quotes has led staff to recommend the proposed delegation of authority for future years.

AEA Director Robison asked if the Retirement Boards use the same broker as the District. Ms. Weekly responded in the affirmative.

Director Niz moved to adopt Item 33. Director McGee Lee seconded the motion. Item 33 was carried unanimously by roll call vote: Ayes: Directors Kennedy, Niz and McGee Lee. Noes: None.

34. Resolution: Approving Disability Retirement for Joseph Nagel (ATU). (Weekly)

Valerie Weekly presented Item 34 for approval.

Director Niz moved to adopt Item 34. Director McGee Lee seconded the motion. Item 34 was carried unanimously by roll call vote: Ayes: Kennedy, Niz and McGee Lee. Noes: None.

REPORTS FROM COMMITTEES

None.

REPORTS, IDEAS AND COMMUNICATIONS

Jamie Adelman advised that the contract with State Street Bank and Trust, the current custodian for investments, is set to expire August 31, 2019. Staff is actively working with Callan LLC to revamp the Request For Proposal (RFP) for these services. Ms. Adelman will work with the Board Chairs to convene a committee responsible for RFP evaluations, with Callan's assistance on the technical side. Ms. Adelman added that she expects to return to the Retirement Board in June to ask for an extension of the current custodial contract for while the contracting process is underway.

The meeting was adjourned at 11:06 a.m.

Ralph Niz, Chair

DISCUSSION

Table 1 below shows the employer and employee contribution rates for all of the Sacramento Regional Transit District Retirement Plans, by Plan and tier, as of the date indicated.

Table 1

Employer Contribution Rates As of March 31, 2019

	ATU	IBEW	Salary
	Contribution	Contribution	Contribution
	Rate	Rate	Rate
Classic	28.15%	25.03%	34.30%
Classic w/Contribution*	25.15%		
PEPRA**	21.65%	19.78%	29.05%

*Includes members hired during calendar year 2015, employee rate 3%

**PEPRA employee rates: ATU - 6.5%, IBEW and Salary 5.25%

Unaudited Financial Statements

Attached hereto are unaudited financial statements for the quarter and the year-to-date ended March 31, 2019. The financial statements are presented on an accrual basis and consist of a Statement of Fiduciary Net Position (balance sheet) (Attachment 1), a Statement of Changes

Approved:

in Fiduciary Net Position (income statement) for the quarter ended March 31, 2019 (Attachment 2), and a year-to-date Statement of Changes in Fiduciary Net Position (Attachment 3).

The Statement of Fiduciary Net Position includes a summary of fund assets showing the amounts in the following categories: investments, prepaid assets, and other receivables. This statement also provides amounts due from/to the District and Total Fund Equity (net position).

The Statement of Changes in Fiduciary Net Position includes activities in the following categories: investment gains/losses, dividends, interest income, unrealized gains/losses, benefit contributions/payouts, and investment management and administrative expenses.

Asset Rebalancing

Pursuant to Section IV, Asset Rebalancing Policy of the Statement of Investment Objectives and Policy Guidelines for the ATU, IBEW and Salaried Employees' Retirement Funds, the Retirement Boards have delegated authority to manage pension plan assets in accordance with the approved rebalancing policy to the District's Director, Finance and Treasury. The Director, Finance and Treasury is required to report asset rebalancing activity to the Boards at their guarterly meetings. Rebalancing can occur for one or more of the following reasons:

- 1. The Pension Plan ended the month with an accounts receivable or payable balance due to the District. A payable or receivable is the net amount of the monthly required contribution (required contribution is the percentage of covered payroll determined by the annual actuarial valuation) less the Plan's actual expenses.
- 2. The Pension Plan hires or removes a Fund Manager, in which case securities must be moved to a new fund manager.
- 3. The Pension Plan investment mix is under or over the minimum or maximum asset allocation as defined in the Statement of Investment Objectives and Policy Guidelines.

Attached hereto as Attachment 4 is the ATU Plan's Schedule of Cash Activities for the three months ended March 31, 2019. The schedule of cash activities includes a summary of Plan activities showing the amounts in the following categories: District's pension contributions to the Plan, payments to retirees, and the Pension Plan's cash expenditures paid. This schedule also lists the rebalancing activity that occurred for the three months ended March 31, 2019. The ATU Plan reimbursed \$800,165.82 to the District as the result of the net cash activity between the pension plan expenses and the required pension contributions. A line has been added to capture the appropriate Due To SacRT balance due to a transfer error by the custodian.

Attached hereto as Attachment 5 is the ATU Plan's Asset Allocation as of March 31, 2019. This statement shows the ATU Plan's asset allocation as compared to targeted allocation percentages as defined in the Statement of Investment Objectives and Policy Guidelines.

REGIONAL TRANSIT RIBINAG

Page 3 of 3 Agenda Board Meeting Open/Closed Information/Action Issue Item No. Date Session Item Date 6 06/12/19 Retirement Action 04/16/19

Receive and File Administrative Reports for the Quarter Ended March 31, 2019 Subject: for the ATU Pension Plan (ATU). (Adelman)

Attached hereto as Attachment 6 is a reconciliation between the Callan Performance Report and the ATU. IBEW and Salaried Pension Plans' unaudited financial statements. The reports differ in that the unaudited financial statements reflect both investment activities and the pension fund's inflows and outflows. Callan's report only reflects the investment activities. The "Net Difference" amounts shown are the results of Callan and State Street using different valuations for the same securities and/or litigation settlements received by the Plans.

Included also as Attachment 7 is a reconciliation between the Callan Performance Report and the Schedule of Cash Activities for payments made from/to the District. Callan's report classifies gains from trades and litigation income as "net new investments." Finance staff classifies gains from trades and litigation income in the Pension Plan's unaudited Statement of Changes in Fiduciary Net Position as "Other Income," which is combined in the category of "Interest, Dividend, & Other Inc".

Attached hereto as Attachment 8 is a schedule reflecting Fund Managers' guarterly investment returns and their investment fees. Additionally, the schedule reflects annual rates of return on investment net of investment fees for the one-year and three-year periods ended March 31, 2019 as compared to their benchmarks.

Attached hereto as Attachment 9 is a schedule reflecting employee transfers from one union/employee group to another, as well as any transfers of plan assets from the ATU Plan to the Salaried Plan, all retirements, and retiree deaths during the three months ended March 31. 2019.

HANSON BRIDGETT LLP & SACRAMENTO REGIONAL TRANSIT DISTRICT RETIREMENT BOARDS

LEGAL SERVICES SUMMARY

Set forth below is a broad summary report of significant legal matters addressed by Hanson Bridgett LLP for the Sacramento Regional Transit District Retirement Boards during the Quarter ended March 31, 2019.

- 1. Weekly client conference calls and internal conferences on pending matters, upcoming Board meetings and follow-up from prior Board meetings.
- 2. Preparation for and participation in Quarterly Board Meetings, including review and markup of agenda materials and related Board Chair conference calls.
- 3. Preparation for and participation in new Board Member training.
- 4. Preparation for and participation in Special ATU Retirement Board Meeting.
- 5. Assist with finalizing the investment consultant services contract.
- 6. Review and revise investment management documentation.
- 7. Review and respond to issues regarding custodian RFP.
- 8. Review and respond to issues regarding operations audit.
- 9. Review and analyze issues regarding "pop-up" benefit under IBEW Plan.
- 10. Advise staff on issues regarding calculation of normal cost for PEPRA members.
- 11. Provide counsel on issues including, but not limited to:
 - a. Pension Plan documents and updates;
 - b. Financial reporting;
 - c. Benefit eligibility and claims determinations;
 - d. Calculation of benefits under various scenarios;
 - e. Fiduciary duties.

Respectfully Submitted,

/s/ Shayna M. van Hoften

Subject: Amendment of the Investment Custodian Services Contract with State Street Bank and Trust Company to Extend the Term by Six Months and Increase the Limit to \$733,572

<u>ISSUE</u>

Amendment to the Retirement Fund Custodian Services Contract with State Street Bank and Trust Company to Extend the Term of the Contract by Six Months and Increase the Limit to \$733,572 (ALL). (Adelman)

RECOMMENDED ACTION

Adopt Resolution No. 19-06-____, Delegating Authority to the Sacramento Regional Transit District's General Manager/CEO to Sign a First Amendment to the Retirement Fund Custodian Services Contract with State Street Bank and Trust Company to Extend the Term of the Contract by Six Months and Increase the Limit to \$733,572.

FISCAL IMPACT

The proposed six-month extension will increase the consideration limit for this contract by an estimated \$71,100.

Original Contract Not-to-Exceed Amount:	\$662,472
Estimated cost of six-month Contract Extension*:	71,100
Amended Total Contract Not-to-Exceed Amount:	\$733,572

*The estimated cost was calculated as follows:

1. Monthly rate of \$10,648 times 6 months (September 2019 through February 2020) equals \$63,888.

2. Add \$4,800 for 6 months of compliance monitoring

3. Add \$2,412 of miscellaneous costs.

Note: This amount is an estimate. The Pension Plans will pay State Street based on the actual fees incurred

DISCUSSION

The Pension Plans require ongoing retirement fund custodian services, currently provided under a five-year 2014 contract with State Street Bank and Trust Company, due to expire August 31, 2019.

Earlier this month, Staff issued a Request for Proposal ("RFP") for custodian and compliance monitoring services for the Pension Plans, with responses due in June 2019. Before the RFP was released, Bo Abesamis, Executive Vice President, Mark Kinoshita, Senior Vice President, and Alvaro Vega, Assistant Vice President at Callan LLC ("Callan") provided technical support

Subject:	Amendment of the Investment Custodian Services Contract with State Street
	Bank and Trust Company to Extend the Term by Six Months and Increase the
	Limit to \$733,572

and revised the custodial services technical requirements, scope of work, and contract document to help ensure that the RFP meets current industry standards and will result in high quality responses. The SacRT procurement department in conjunction with Hanson Bridgett completed the RFP document. Callan will provide a first review of the proposals submitted in response to the RFP, and will prepare a summary matrix of all responses to streamline the review and selection process. The review, expected to be performed in July 2019, will be performed by a committee made up of Pension staff and a member from each of the five bargaining groups, with support from Callan. Staff anticipates bringing a recommendation regarding a new contract to provide custodian and compliance monitoring services to the Boards at the Quarterly Retirement Board Meeting in September 2019.

If a new custodian is selected, transition of services will take 60 to 90 days.

Based on this timeline, the proposed six-month contract extension is necessary to provide enough time to complete the selection process, negotiate contract terms and, if necessary, transition services to a new custodian. Therefore, staff recommends that the Retirement Boards authorize the Sacramento Regional Transit District General Manager/CEO to sign a First Amendment to the Retirement Fund Custodian Services contract with State Street Bank and Trust Company to extend the term of the contract through February 29, 2020 and increase the contract limit to \$733,572.

It is possible that a new contract could be in effect before November 30, 2019, which would allow the First Amendment to the State Street Bank and Trust Company contract to be terminated at an earlier date.

Adopted by the Board of Directors for the Retirement Plan for Sacramento Regional Transit District Employees Who Are Members of the ATU Local Union 256 on this date:

AUTHORIZING SACRAMENTO REGIONAL TRANSIT DISTRICT'S GENERAL MANAGER/CEO TO SIGN THE FIRST AMENDMENT TO THE RETIREMENT FUND CUSTODIAN SERVICES CONTRACT WITH STATE STREET BANK AND TRUST COMPANY TO EXTEND THE CONTRACT TERM SIX MONTHS AND INCREASE THE TOTAL CONSIDERATION LIMIT TO \$733,572

BE IT HEREBY RESOLVED BY THE RETIREMENT BOARD OF DIRECTORS FOR THE RETIREMENT PLAN FOR SACRAMENTO REGIONAL TRANSIT DISTRICT EMPLOYEES WHO ARE MEMBERS OF THE ATU LOCAL UNION 256 AS FOLLOWS:

THAT, it is in the best interest of the Retirement Plan to extend the five-year term of the custodian services contract with State Street Bank and Trust Company, effective September 1, 2014, for six months (through February 29, 2020).

THAT, the Retirement Board hereby authorizes the General Manager/CEO of the Sacramento Regional Transit District to sign the First Amendment to the custodian services contract with State Street Bank and Trust Company, in a form approved by Legal Counsel, to extend the contract term by six months and to increase the contract's total consideration by up to \$71,100, for a new total contract amount not to exceed \$733,572.

Subject: Investment Performance Review by AQR for the ATU, IBEW and Salaried Retirement Funds for the International Small Capitalization Equity Asset Class for the Quarter Ended March 31, 2019 (ALL). (Adelman)

<u>ISSUE</u>

Investment Performance Review by AQR for the ATU, IBEW and Salaried Funds for the International Small Capitalization Equity Asset Class for the Quarter Ended March 31, 2019 (ALL). (Adelman)

RECOMMENDED ACTION

Information Only

FISCAL IMPACT

None.

DISCUSSION

Retirement funds are invested consistent with the Statement of Investment Objectives and Policy Guidelines (Policy) adopted by each Retirement Board (Board). Under the Policy, the Boards meet at least once every eighteen (18) months with each investment manager to review the performance of the manager's investment, the manager's adherence to the Policy, and any material changes to the manager's organization. The Policy also establishes the Retirement Funds' asset allocation policy and the asset classes in which the Plans funds are invested. The asset classes established by the Policy are (1) Domestic Large Capitalization Equity, (2) Domestic Small Capitalization Equity, (3) International Large Capitalization Equity, (4) International Small Capitalization Equity, (5) International Emerging Markets, and (6) Domestic Fixed-Income.

AQR is the Retirement Boards' International Small Capitalization Equity fund manager. AQR will be presenting performance results for the quarter ended March 31, 2019, shown in Attachment 1, and answering any questions.

Strategy Update

Investment Themes*

Hypothetical long-term efficacy across regions

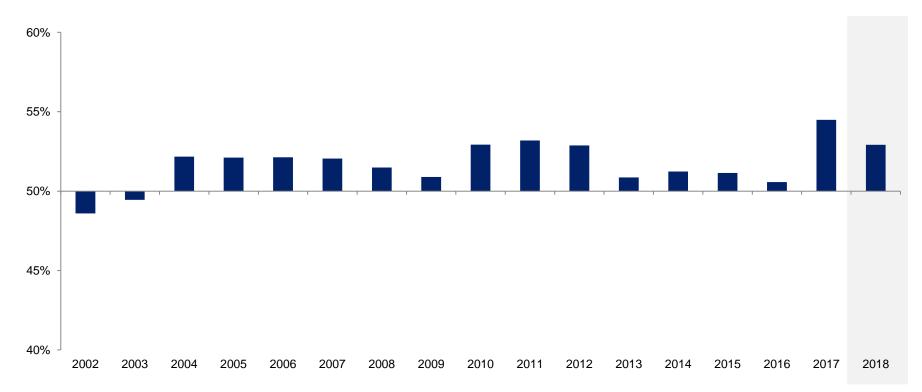

* Source: AQR. AQR Value, Momentum, Quality, and Sentiment theme data is indicative of gross USD returns net of transactions-costs for a long-short, market neutral implementations of the factors at 7% volatility from 1/1/1984–12/31/2018 (where available for each theme). Y-axis for Europe, Japan, and Emerging Sentiment theme data is compressed due to shorter length of backtests (begin in 2004). Gross performance does not reflect the deduction of investment advisory fees. Hypothetical data has inherent limitations, some of which are disclosed in the Appendix. Diversification does not eliminate the risk of experiencing investment losses.

Fundamentals

Model accuracy for predicting changes in fundamentals has not diminished

Percent of Earnings Surprises Predicted Correctly: Hypothetical International Small Cap Value & Momentum

January 1, 2002 - December 31, 2018

AQR

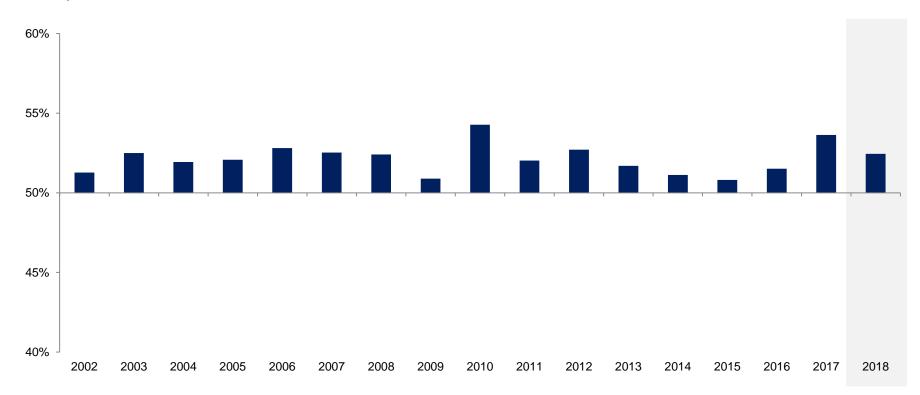

Source: AQR, Bloomberg. Data shows the alignment of AQR's Hypothetical Value and Momentum themes with subsequent earnings surprises of International Small Cap stocks (roughly equivalent to the MSCI World ex US Small Cap universe) using quarterly data. Positive/negative earnings surprises are defined relative to the median in the universe. Date range is January 1, 2002 – March 31, 2019. Returns are gross of fees and in USD. The date range is limited due to availability of earnings surprise data. For illustrative purposes only and not representative of an actual portfolio AQR currently manages. Hypothetical data has inherent limitations, some of which are disclosed in the Appendix.

Fundamentals

Model accuracy for predicting changes in fundamentals has not diminished

Percent of Earnings Surprises Predicted Correctly: Hypothetical International Small Cap Model

January 1, 2002 - December 31, 2018

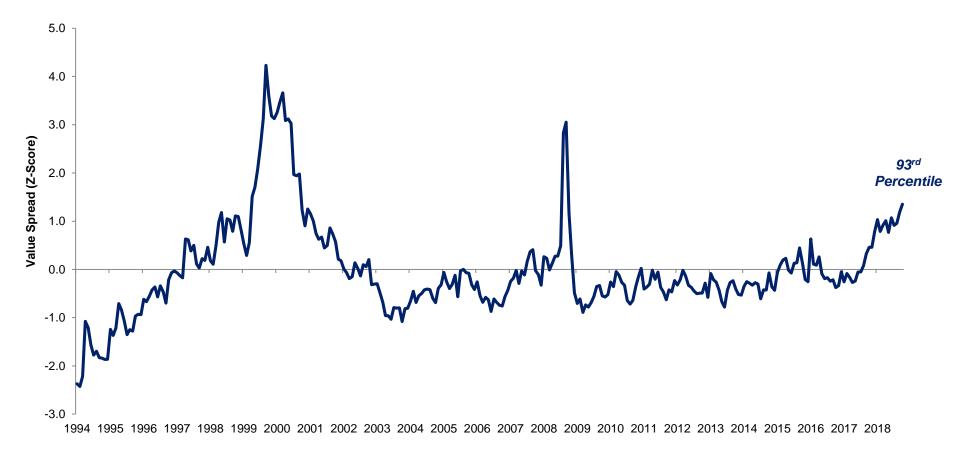

Source: AQR, Bloomberg. Data shows the alignment of AQR's Hypothetical model with subsequent earnings surprises of International Small Cap stocks (roughly equivalent to the MSCI World ex US Small Cap universe) using quarterly data.. Positive/negative earnings surprises are defined relative to the median in the universe. Date range is January 1, 2002 – March 31, 2019. Returns are gross of fees and in USD. The date range is limited due to availability of earnings surprise data. For illustrative purposes only and not representative of an actual portfolio AQR currently manages. Hypothetical data has inherent limitations, some of which are disclosed in the Appendix.

Fundamentals

As value has sold off, spreads have moved significantly

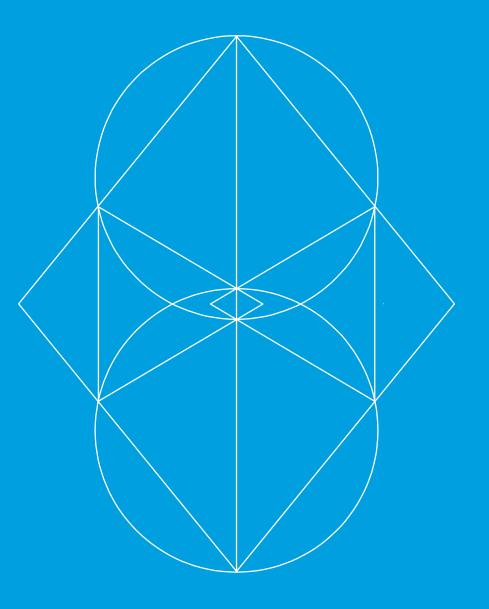

International Small Cap Hypothetical Industry-Neutral Value Portfolio: Value Spread June 1, 1994 – March 31, 2019

Source: AQR. Value composite includes four value measures: book-to-price, earnings-to-price, forecast earnings-to-price, and sales-to-enterprise value; spreads are measured based on ratios. To construct industry-neutrality, the value spreads are constructed by comparing the aforementioned value measures within each industry, which are then aggregated up to represent an entire portfolio. Hypothetical data has inherent limitations, some of which are disclosed in the Appendix. Please read the Appendix for important disclosures.

Investment Philosophy and **Process**

Evaluating Stocks AQR's evaluation criteria are based on economic signals

- We form a view on each stock through a model developed and improved over the last 20 years.
- Stocks are evaluated based on the below signals, relative to other stocks in the below peer groups, both regionally and globally.

Signal Groups		Peer Groups
Valuation:	Attractive prices	Within Industries
Momentum:	Improving prices and fundamentals	
Stability:	Stable and high quality financials	Across Industries
Earnings Quality:	Sound accounting practices	Economically-Linked Groups
Investor Sentiment:	Support of high conviction investors	
Management Signaling:	Shareholder-friendly management	Country-Industry Pairs

Evaluating Stocks

Example: local auto components stock (tires & rubber)

Below is a stylized example of our model's view on a single stock (ranks/percentiles), highlighting a small subset of our signals.

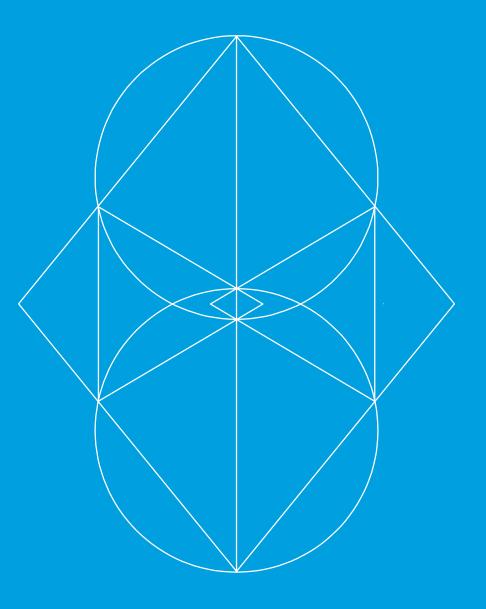

Within Indust (Example Stoc	r y ck vs. Auto Stock Peer	s)			Across Industry (Auto Industry vs. Other Industries)		
Signal	Example	Data Value	Percentile		Signal Example	Data Value	Percentile
Valuation:	Adjusted Price / Earnings	14.5x	31%		Industry Price Change Last 12 Months	-1.2%	24%
Momentum:	Adjusted 12 Month Return*	20.8%	77%	Percentile Score: 92%	Economically-Linked Groups (Example's Linked Peers vs. Other S	Stocks' Linke	ed Peers)
Earnings Quality:	Change in Accounts Receivable	0.9%	69%	Based on weighted-average	Signal Example	Data Value	Percentile
Stability:	3-year Return on Equity	12.7%	55%	signal scores	Momentum of Customer Supplier Pairs	16.6%	88%
Investor Sentiment	Change in % of Shares Shorted	0.7%	54%		Country-Industry Pairs (Local Auto Components Stocks vs.	Other Count	ries')
Management Signaling:	% Change in Shares Outstanding	-2.4%	91%		Signal Example 3-year Return on Equity	Data Value 17.5%	Percentile 81%

*Does not include most recent month's return.

Appendices

Performance Disclosures

This document has been provided to you solely for information purposes and does not constitute an offer or solicitation of an offer or any advice or recommendation to purchase any securities or other financial instruments and may not be construed as such. The factual information set forth herein has been obtained or derived from sources believed to be reliable but it is not necessarily all-inclusive and is not guaranteed as to its accuracy and is not to be regarded as a representation or warranty, express or implied, as to the information's accuracy or completeness, nor should the attached information serve as the basis of any investment decision. This document is intended exclusively for the use of the person to whom it has been delivered and it is not to be reproduced or redistributed to any other person.

There is no guarantee, express or implied, that long-term return and/or volatility targets will be achieved. Realized returns and/or volatility may come in higher or lower than expected.

Performance figures contained herein reflect the reinvestment of dividends and all other earnings and represent unaudited estimates of realized and unrealized gains and losses prepared by AQR. There is no guarantee as to the above information's accuracy or completeness. PAST PERFORMANCE IS NOT A GUARANTEE OF FUTURE PERFORMANCE. Diversification does not eliminate the risk of experiencing investment losses.

There is a risk of substantial loss associated with trading commodities, futures, options and leverage. Before investing carefully consider your financial position and risk tolerance to determine if the proposed trading style is appropriate. Investors should realize that when engaging in leverage, trading futures, commodities and/or granting/writing options one could lose the full balance of their account. It is also possible to lose more than the initial deposit when engaging in leverage, trading futures and/or granting/writing options. All funds committed should be purely risk capital.

Broad-based securities indices are unmanaged and are not subject to fees and expenses typically associated with managed accounts or investment funds. Investments cannot be made directly in an index.

Gross performance results do not reflect the deduction of investment advisory fees, which would reduce an investor's actual return. For example, assume that \$1 million is invested in an account with the Firm, and this account achieves a 10% compounded annualized return, gross of fees, for five years. At the end of five years that account would grow to \$1,610,510 before the deduction of management fees. Assuming management fees of 1.00% per year are deducted monthly from the account, the value of the account at the end of five years would be \$1,532,886 and the annualized rate of return would be 8.92%. For a 10-year period, the ending dollar values before and after fees would be \$2,593,742 and \$2,349,739, respectively. AQR's asset based fees may range up to 2.85% of assets under management, and are generally billed monthly or quarterly at the commencement of the calendar month or quarter during which AQR will perform the services to which the fees relate. Where applicable, performance fees are generally equal to 20% of net realized and unrealized profits each year, after restoration of any losses carried forward from prior years. In addition, AQR funds incur expenses (including start-up, legal, accounting, audit, administrative and regulatory expenses) and may neve redemption or withdrawal charges up to 2% based on gross redemption or withdrawal proceeds. Please refer to AQR's ADV Part 2A for more information on fees. Consultants supplied with gross results are to use this data in accordance with SEC, CFTC, NFA or the applicable jurisdiction's guidelines.

Performance Disclosures

There is a risk of substantial loss associated with trading commodities, futures, options and leverage. Before investing carefully consider your financial position and risk tolerance to determine if the proposed trading style is appropriate. Investors should realize that when engaging in leverage, trading futures, commodities and/or granting/writing options one could lose the full balance of their account. It is also possible to lose more than the initial deposit when engaging in leverage, trading futures and/or granting/writing options. All funds committed should be purely risk capital.

The MSCI Emerging Markets Index captures large and mid cap representation across 24 Emerging Markets (EM) countries*. With 1,138 constituents, the index covers approximately 85% of the free float-adjusted market capitalization in each country.

The Russell 1000 Index is an index of approximately 1,000 of the largest companies in the U.S. equity market.

The Russell 2000 index is an index measuring the performance of approximately 2,000 small-cap companies in the Russell 3000 Index, which is made up of 3,000 of the biggest U.S. stocks. The Russell 2000 serves as a benchmark for small-cap stocks in the United States.

The Russell 1000 Value Index measures the performance of the large-cap value segment of the U.S. equity universe. It includes those Russell 1000 companies with lower price-to-book ratios and lower expected growth values. The index is unmanaged, includes the reinvestment of dividends and cannot be purchased directly by investors.

The Russell 1000 Growth Index measures the performance of the large-cap growth segment of the U.S. equity universe. It includes those Russell 1000 companies with higher price-tobook ratios and higher forecasted growth values. The index is unmanaged and cannot be purchased directly by investors.

Performance Disclosures

Hypothetical AQR U.S. Valuation Theme Backtest Description The AQR U.S. Valuation Theme Backtest utilizes the full set of underlying factors that compose the Valuation theme within AQR's Global Stock Selection strategy to evaluate stocks and create a long-short, market-neutral and industry-neutral equity portfolio based exclusively on these signals. The Valuation Theme is designed to capture the tendency for relatively cheap assets to outperform relatively expensive ones. Backtest returns are gross of advisory fees and transaction costs from January 1, 2001 – March 31, 2019. The backtest utilizes a monthly rebalancing schedule and targets 7% annual volatility. The investment universe includes a broad subset of liquid tradeable large and mid cap stocks within the U.S. The risk model used is the Barra U.S. Equity Risk Model (USE3L).

Hypothetical AQR U.S. Momentum Theme Backtest Description The AQR U.S. Momentum Theme Backtest utilizes the full set of underlying factors that compose the Momentum theme within AQR's Global Stock Selection strategy to evaluate stocks and create a long-short, market-neutral and industry-neutral equity portfolio based exclusively on these signals. The Momentum Theme is designed to capture the tendency for assets that have outperformed recently to continue to outperform. Backtest returns are gross of advisory fees and transaction costs from January 1, 2001 – March 31, 2019. The backtest utilizes a monthly rebalancing schedule and targets 7% annual volatility. The investment universe includes a broad subset of liquid tradeable large and small cap stocks within the U.S. The risk model used is the Barra U.S. Equity Risk Model (USE3L).

Hypothetical AQR U.S. Fundamental and Price Momentum Signals Backtest Description: The AQR U.S. Fundamental and Price Momentum Theme Backtest represent the full-set of fundamental and price momentum factors that within the Momentum theme of AQR's Global Stock Selection strategy to evaluate stocks and create a long-short, market-neutral and industry-neutral equity portfolio based exclusively on these signals. The Momentum Theme is designed to favor stocks with improving prices and fundamentals. Backtest returns are gross of advisory fees and transaction costs from January 1, 2018 – March 31, 2019. The backtest utilizes a monthly rebalancing schedule and targets 7% annual volatility. The investment universe includes a broad subset of liquid tradeable large and mid cap stocks within the U.S. The risk model used is the Barra U.S. Equity Risk Model (USE3L).

Hypothetical AQR U.S. Industry Momentum Theme Backtest Description The AQR U.S. Industry Momentum Theme Backtest utilizes the full set of underlying factors that compose the Industry Momentum theme within AQR's Global Stock Selection strategy to evaluate stocks and create a long-short, market-neutral and industry-neutral equity portfolio based exclusively on these signals. The Industry Momentum Theme is designed to capture the tendency for industries that have outperformed recently to continue to outperform. Backtest returns are gross of advisory fees and transaction costs from January 1, 2018 – March 31, 2019. The backtest utilizes a monthly rebalancing schedule and targets 7% annual volatility. The investment universe includes a broad subset of liquid tradeable large and small cap stocks within the U.S. The risk model used is the Barra U.S. Equity Risk Model (USE3L).

Hypothetical AQR U.S. Cross Momentum Theme Backtest Description The AQR U.S. Cross Momentum Theme Backtest utilizes the full set of underlying factors that compose the theme within AQR's Global Stock Selection strategy to evaluate stocks and create a long-short, market-neutral and industry-neutral equity portfolio based exclusively on these signals. The Cross Momentum Theme is designed to capture the tendency for a company's improvement to follow the improvement of related companies. Backtest returns are gross of advisory fees and transaction costs from January 1, 2018 – March 31, 2019. The backtest utilizes a monthly rebalancing schedule and targets 7% annual volatility. The investment universe includes a broad subset of liquid tradeable large and small cap stocks within the U.S. The risk model used is the Barra U.S. Equity Risk Model (USE3L).

Hypothetical AQR U.S. Valuation & Momentum Themes Combination Backtest Description:

The AQR U.S. Valuation and Momentum Combo Backtest is a simple 50/50 combination of the Valuation and Momentum themes within AQR's Global Stock Selection strategy to evaluate stocks and create a long-short, market-neutral and industry-neutral equity portfolio based exclusively on these signals within each of the identified regions. Backtest returns are gross of advisory fees and transaction costs from April 1, 2001 – March 31, 2019. The backtest utilizes a monthly rebalancing schedule and each sub-component targets 7% annual volatility. The investment universes include a broad

None.

DISCUSSION

Pension funds are invested consistent with the Statement of Investment Objectives and Policy Guidelines adopted by each Retirement Board. Attached are the two investment performance reports prepared by the Boards' pension investment consultants. The first report is the First Quarter 2019 Market Update (Attachment 1) and the second is the Investment Measurement Service Quarterly Review as of March 31, 2019 (Attachment 2). These reports provide a detailed analysis of the performance of each of the investment managers retained by the Retirement Boards to manage the Retirement Funds for the quarter ended March 31, 2019. The second report compares the performance of each investment manager with benchmark indices, other fund managers of similarly invested portfolios and other indices.

Investment Compliance Monitoring

In accordance with the Statement of Investment Objectives and Policy Guidelines for the Sacramento Regional Transit District Retirement Plans (Investment Policy), State Street Bank performs daily investment compliance monitoring on the Plans' three (3) actively managed funds. As of March 31, 2019, there were no compliance warnings or alerts to be reported; therefore, the investments are in compliance with the Investment Policy. The final attached report includes the monitoring summary (Attachment 3).

Economic Commentary

First Quarter 2019

Quarterly Real GDP Growth*

8% 6% 4% 2% -0% -2% -4% -6% -8% -10% 98 99 00 01 02 03 04 05 06 07 08 09 10 11 12 13 14 15 16 17 18 19

Inflation Year-Over-Year

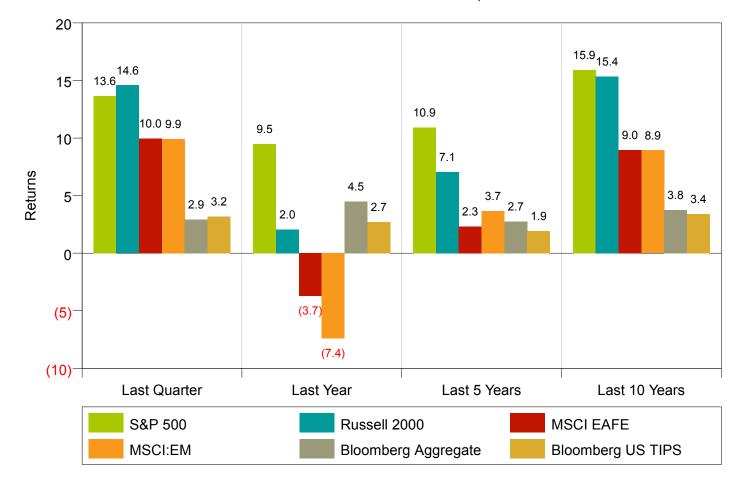

- The Fed is largely alone on a path to normalize interest rates, but has paused after 9 rate hikes
- U.S. economy remains strong, labor market very tight, reaching the limits of full employment
 - Q1 increase in GDP (3.2%) a sign of resilience after Q4 market swoon and government shutdown in January.
 - Consumer spending slowed in Q1, but it may be a blip, reflecting the impact of the shutdown.
 - Signal from Fed that further rate hikes are on hold have boosted consumer and business confidence.
- Oil prices may (or may not) radically alter inflation outlook

• Dovish Fed comments, solid corporate fundamentals and low employment propelled equity markets in first quarter.

- Risk-on market highlighted by low quality outperforming high quality by 440 basis points.
- Surprisingly, utilities and REITs produced solid returns as investors sought yield in face of flattening yield curve and end to rate hikes.
- Sharp change in Fed rhetoric influenced stronger growth performance.
- Investors favored companies with stronger earnings prospects to counter softer economic environment.
- Risk-on appetite fed small cap.

Non-US Equity

First Quarter 2019

Developed Country Returns

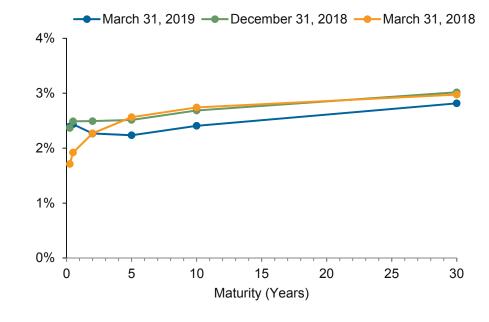

- Global Equity Rebound
 - Investors resumed a risk-on outlook as central banks telegraphed more accommodative positioning.
 - Market stabilized under delayed U.S./China trade talks and Brexit, although uncertain outcomes remain a future risk.
 - Currency effect was mixed as US\$ rose against euro and yen given soft economic data; and fell against British pound as possibility of "nodeal" Brexit diminished
 - Factor performance favored growth (historical and projected) as investors believed accommodative Fed will extend growth cycle.
- China Drove Emerging Markets

Callan

- EM surged on stimulus measures in China which spurred optimism and diminished growth worries.
- Improving outlook for Chinese consumption and rebound in Asian Tech also contributed.

Yield Curve Flattens While Global Rates Diverge

U.S. Treasury Yield Curves

10-Year Global Government Bond Yields

Treasury yield curve has flattened as rates moved up on the short end

- Yields have barely moved on the long end.
- Inverted yield curve has presaged most recessions in past 70 years.

U.S. yields have diverged as monetary policies have fallen out of sync

 U.S. has paused, but tightening in Euro zone may be skipped entirely in this cycle.

Executive Summary

Capital Markets Review

U.S. EQUITY

Equity markets dramatically snapped back in the first quarter, driven by the Fed's unexpected dovish comments in January, solid corporate fundamentals, and low unemployment.

Large Cap U.S. Equity (S&P 500: +13.6%; Russell 1000: +14.0%)

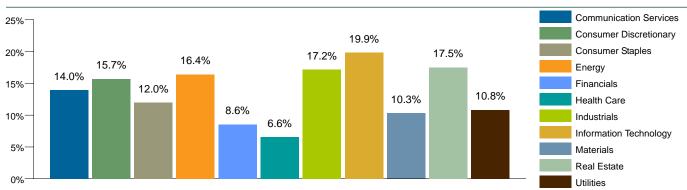

- All sectors delivered double-digit gains with the exception of Financials (+8.6%) and Health Care (+6.6%).
- Consumers remain in good shape, with household debt service as a percentage of disposable income at the lowest level in decades.
- The risk-on market was highlighted by low quality (S&P ratings B or lower) outperforming high quality (B+ or higher) by 440 basis points.
- Surprisingly, Utilities and REITs produced double-digit returns; investors sought yield in the face of a flattening yield curve and the end to rate hikes in the first quarter.

Growth vs. Value (Russell 1000 Growth: +16.1%; Russell 1000 Value: +11.9%)

- The sharp change in Fed rhetoric influenced the stronger performance of growth stocks over value stocks during the quarter. Investors favored companies with stronger earnings prospects to counter a softer economic environment.
- Technology produced strong results, while the outlook for Financials weakened as the yield curve flattened.

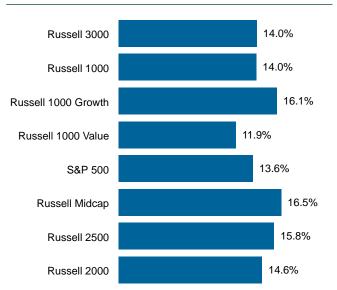

Small Cap (Russell 2000: +14.6%; Russell 2000 Growth: +17.1%; Russell 2000 Value: +11.9%)

- Within the Russell 2000 Growth Index, the three largest sectors (Health Care, Consumer Discretionary, and Technology) surged 19%, 17%, and 23%, respectively. Software and biotechnology both posted 25% gains in the quarter; combined they are more than 23% of the benchmark weight.
- Influenced by excessive fourth quarter tax-loss selling, the market experienced a strong "January effect"—where last year's losers became January 2019's winners.

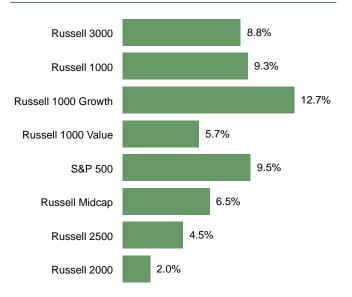

S&P Sector Returns, Quarter Ended March 31, 2019

U.S. Equity: Quarterly Returns

U.S. Equity: One-Year Returns

Source: Standard & Poor's

NON-U.S./GLOBAL EQUITY

Global equity markets were positive in the first quarter following a sharp sell-off to end 2018. Investors resumed a risk-on outlook as central banks telegraphed more accommodative positioning. Delayed outcomes regarding U.S./China trade talks and Brexit negotiations allowed markets to stabilize, although uncertain outcomes remain a future risk.

Global/Non-U.S. Developed (MSCI EAFE: +10.0%; MSCI World ex USA: +10.4%; MSCI ACWI ex USA: +10.3%; MSCI Europe: +10.8%; MSCI Japan: +6.7%)

- Developed markets rallied as central banks around the world expressed more accommodative paths with interest rates and quantitative easing.
- Brexit negotiations continue and a "no-deal" Brexit remains a possibility, but with an extended deadline. The potential for investment paralysis drags on.
- European PMI continued to deteriorate, falling to 47.7 in March from 49.4.
- The currency effect was mixed as the U.S. dollar rose against the euro and yen, by 1.8% and 0.9%, but fell against the British pound by 2.3% as a delay in Brexit allowed for a temporary bounce.
- EAFE sector performance was mixed. Information Technology (+15.3%) and Materials (+13.2%) led economically sensitive sectors; Consumer Staples (+12.4%) led defensive sectors. Interest rate-sensitive Financials (+6.9%) and Utilities (+9.0%) trailed the broad index.
- Factor performance favored growth (historical and projected) while value factors were generally negative.

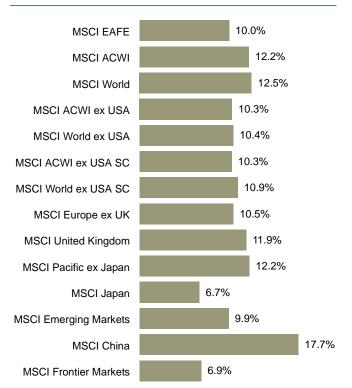

Emerging Markets (MSCI Emerging Markets Index: +9.9%)

- In a big reversal from the fourth quarter, China led emerging markets with MSCI China gaining 17.7% and MSCI China A up 30.9%.
- Trade talks continue but positive indications for a deal buoyed markets; uncertainty on the outcome remains.
- Asian Information Technology rebounded nicely with Chinese IT (+27.6%) leading the sector. An improving outlook on Chinese consumption positively influenced EM Consumer Discretionary (+20.8%), which was the topperforming sector.
- Growth led value with MSCI EM Growth gaining 12.0% and EM Value up 7.8%.

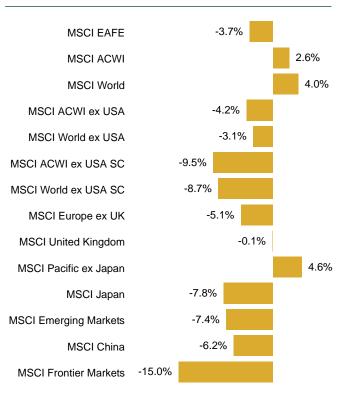

Non-U.S. Small Cap (MSCI World ex USA Small Cap: +10.9%; MSCI EM Small Cap: +7.8%; MSCI ACWI ex USA Small Cap: +10.3%)

- Within developed markets, small cap performed in line with large cap.
- EM Small Cap trailed EM as MSCI China Small Cap has less exposure to IT, which led the risk-on rally.

Global Equity: One-Year Returns

Source: MSCI

U.S. FIXED INCOME

Risk markets sharply reversed from the fourth quarter sell-off supported by the Fed's unexpected dovish comments, relatively solid U.S. economic growth data, and tempered concern over a slowing China. This quarter's strong results recaptured most of the loss experienced in the prior quarter.

U.S. Fixed Income (Bloomberg Barclays US Aggregate: +2.9%)

- U.S. Treasuries rose 2.1% as the yield curve shifted lower across maturities as growth and inflation expectations declined.
- The shape of the yield curve did not materially change during the quarter. The yield differential between the 10-year and 2-year key rates remained positive and traded around a range of +12 to +20 bps. However, the front-end of the curve inverted, with the 5-year offering less yield than the 2-year.
- TIPS outperformed nominal Treasuries as the Fed's balanced stance and unexpected wage pressures stoked higher inflation expectation.

Investment-Grade Corporates (Bloomberg Barclays Corporate: +5.1%)

- Credit spreads rallied on the back of a softer Fed stance, positive economic news, and better than expected corporate earnings.
- Net new corporate issuance during the first quarter of \$117 billion was roughly on par with a year ago.
- Surprisingly, Aaa-rated corporates (+5.0%) outperformed Aa- (+3.7%) and single A-rated issuers (+4.7%). BBB-rated issuers were the best performers (+5.7%).

High Yield (Bloomberg Barclays Corporate High Yield: +7.3%)

- Given the risk-on environment, below-investment grade issuers were the best performers, aided by strong asset inflows.
- Ba/B sectors (+7.2%) marginally outpaced CCC by 6 bps; this was an unusual occurrence given that the dispersion between high-quality and low-quality is typically wide during these periods of absolute returns.

Leveraged Loans (Credit Suisse Leveraged Loans Index: +3.8%)

- Leveraged loans participated in the rally but lagged both longer duration investment grade and high yield corporates. The sector was negatively impacted by the Fed's pause, retail outflows, and a slow-developing CLO pipeline.
- Bank loans have less sensitivity to interest rates but may have a similar spread duration profile to that of their high yield bond counterparts.

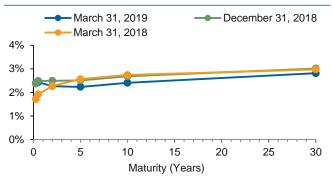

U.S. Fixed Income: Quarterly Returns

U.S. Fixed Income: One-Year Returns

U.S. Treasury Yield Curves

Sources: Bloomberg, Bloomberg Barclays, Credit Suisse

NON-U.S. FIXED INCOME

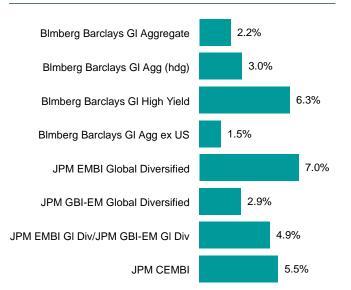

Global Fixed Income (Bloomberg Barclays Global Aggregate (unhedged): +2.2%)

 Developed market sovereign bonds rallied in tandem with Treasuries. The U.S. dollar appreciated modestly versus the euro and yen, but lost ground versus the British pound and Canadian dollar.

U.S. dollar-denominated emerging market debt (JPM EMBI Global Diversified: +7.0%), Local currency-denominated EMD (JPM GBI-EM Global Diversified: +2.9%)

- Country returns within the EMBI Global Diversified Index were all positive for the quarter.
- Turkey (-10.2%) and Argentina (-10.5%) were notable underperformers in the local currency index.
- Positive net inflows into the EM universe continued through quarter-end.

Quarterly Total Fund Relative Attribution - March 31, 2019

The following analysis approaches Total Fund Attribution from the perspective of relative return. Relative return attribution separates and quantifies the sources of total fund excess return relative to its target. This excess return is separated into two relative attribution effects: Asset Allocation Effect and Manager Selection Effect. The Asset Allocation Effect represents the excess return due to the actual total fund asset allocation differing from the target asset allocation. Manager Selection Effect represents the total fund impact of the individual managers excess returns relative to their benchmarks.

Asset Class Under or Overweighting

Actual vs Target Returns

Relative Attribution Effects for Quarter ended March 31, 2019

Current Holdings Based Style Analysis Domestic Equity As of March 31, 2019

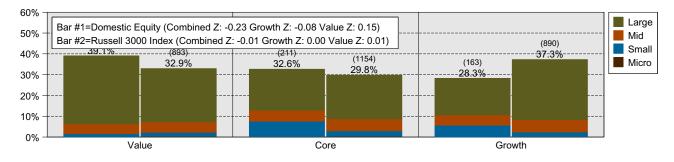

This page analyzes the current investment style of a portfolio utilizing a detailed holdings-based style analysis to determine actual exposures to various market capitalization and style segments of the domestic equity market. The market is segmented quarterly by capitalization and style. The capitalization segments are dictated by capitalization decile breakpoints. The style segments are determined using the "Combined Z Score", based on the eight fundamental factors used in the MSCI stock style scoring system. The upper-left style map illustrates the current market capitalization and style score of the portfolio relative to indices and/or peers. The upper-right style exposure matrix displays the current portfolio and index weights and stock counts (in parentheses) in each capitalization/style segment of the market. The middle chart illustrates the total exposures and stock counts in the three style segments, with a legend showing the total growth, value, and "combined Z" (growth - value) scores. The bottom chart exhibits the sector weights as well as the style weights within each sector.

Risk Adjusted Return Measures vs S&P 500 Index Rankings Against Callan Large Capitalization (Gross) Seven Years Ended March 31, 2019

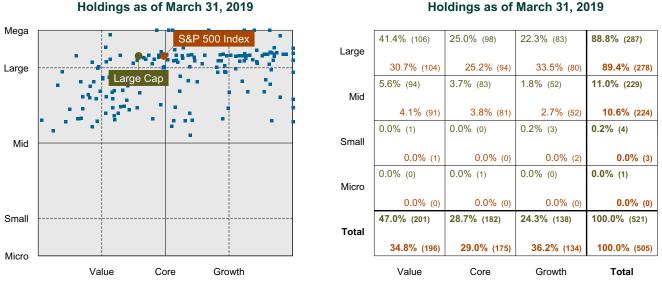

Current Holdings Based Style Analysis Large Cap As of March 31, 2019

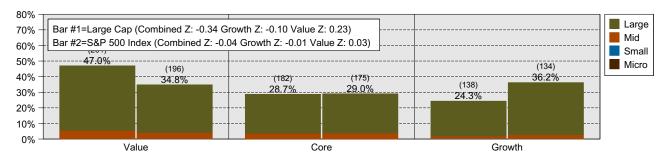

This page analyzes the current investment style of a portfolio utilizing a detailed holdings-based style analysis to determine actual exposures to various market capitalization and style segments of the domestic equity market. The market is segmented quarterly by capitalization and style. The capitalization segments are dictated by capitalization decile breakpoints. The style segments are determined using the "Combined Z Score", based on the eight fundamental factors used in the MSCI stock style scoring system. The upper-left style map illustrates the current market capitalization and style score of the portfolio relative to indices and/or peers. The upper-right style exposure matrix displays the current portfolio and index weights and stock counts (in parentheses) in each capitalization/style segment of the market. The middle chart illustrates the total exposures and stock counts in the three style segments, with a legend showing the total growth, value, and "combined Z" (growth - value) scores. The bottom chart exhibits the sector weights as well as the style weights within each sector.

SSgA S&P 500 Equity Characteristics Analysis Summary

Portfolio Characteristics

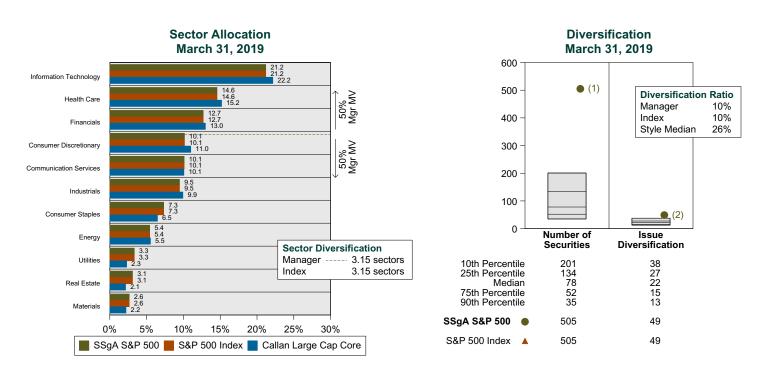

This graph compares the manager's portfolio characteristics with the range of characteristics for the portfolios which make up the manager's style group. This analysis illustrates whether the manager's current holdings are consistent with other managers employing the same style.

Portfolio Characteristics Percentile Rankings Rankings Against Callan Large Cap Core as of March 31, 2019

Sector Weights

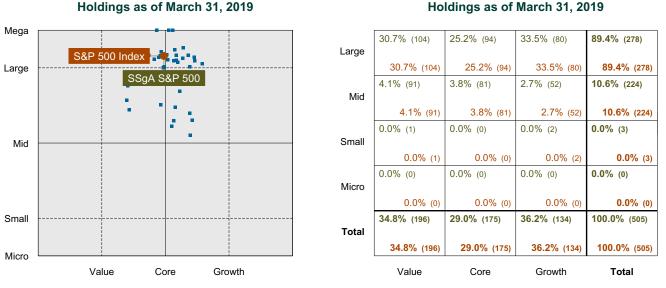

The graph below contrasts the manager's sector weights with those of the benchmark and median sector weights across the members of the peer group. The magnitude of sector weight differences from the index and the manager's sector diversification are also shown. Diversification by number and concentration of holdings are also compared to the benchmark and peer group. Issue Diversification represents by count, and Diversification Ratio by percent, the number of holdings that account for half of the portfolio's market value.

Atlanta Capital Return Analysis Summary

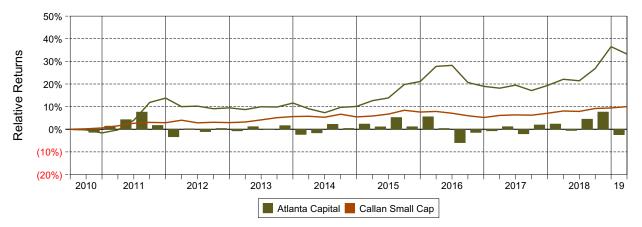

Return Analysis

The graphs below analyze the manager's return on both a risk-adjusted and unadjusted basis. The first chart illustrates the manager's ranking over different periods versus the appropriate style group. The second chart shows the historical quarterly and cumulative manager returns versus the appropriate market benchmark. The last chart illustrates the manager's ranking relative to their style using various risk-adjusted return measures.

Atlanta Capital Equity Characteristics Analysis Summary

Portfolio Characteristics

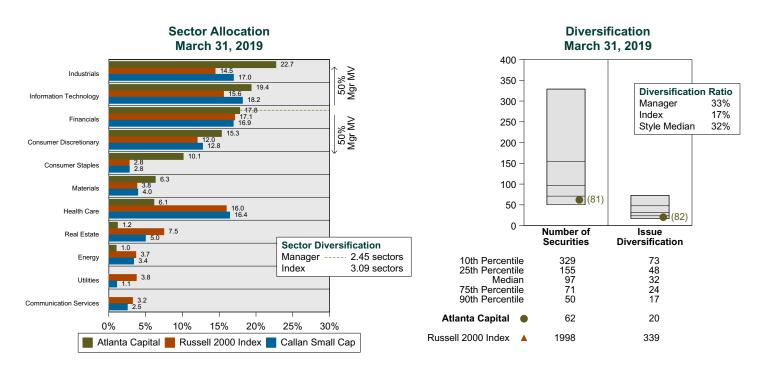

This graph compares the manager's portfolio characteristics with the range of characteristics for the portfolios which make up the manager's style group. This analysis illustrates whether the manager's current holdings are consistent with other managers employing the same style.

Portfolio Characteristics Percentile Rankings Rankings Against Callan Small Capitalization as of March 31, 2019

Sector Weights

The graph below contrasts the manager's sector weights with those of the benchmark and median sector weights across the members of the peer group. The magnitude of sector weight differences from the index and the manager's sector diversification are also shown. Diversification by number and concentration of holdings are also compared to the benchmark and peer group. Issue Diversification represents by count, and Diversification Ratio by percent, the number of holdings that account for half of the portfolio's market value.

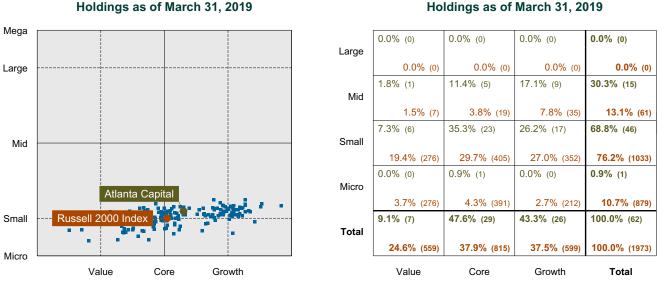

Current Holdings Based Style Analysis Atlanta Capital As of March 31, 2019

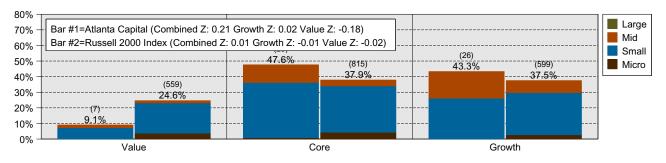

This page analyzes the current investment style of a portfolio utilizing a detailed holdings-based style analysis to determine actual exposures to various market capitalization and style segments of the domestic equity market. The market is segmented quarterly by capitalization and style. The capitalization segments are dictated by capitalization decile breakpoints. The style segments are determined using the "Combined Z Score", based on the eight fundamental factors used in the MSCI stock style scoring system. The upper-left style map illustrates the current market capitalization and style score of the portfolio relative to indices and/or peers. The upper-right style exposure matrix displays the current portfolio and index weights and stock counts (in parentheses) in each capitalization/style segment of the market. The middle chart illustrates the total exposures and stock counts in the three style segments, with a legend showing the total growth, value, and "combined Z" (growth - value) scores. The bottom chart exhibits the sector weights as well as the style weights within each sector.

Return Analysis

The graphs below analyze the manager's return on both a risk-adjusted and unadjusted basis. The first chart illustrates the manager's ranking over different periods versus the appropriate style group. The second chart shows the historical quarterly and cumulative manager returns versus the appropriate market benchmark. The last chart illustrates the manager's ranking relative to their style using various risk-adjusted return measures.

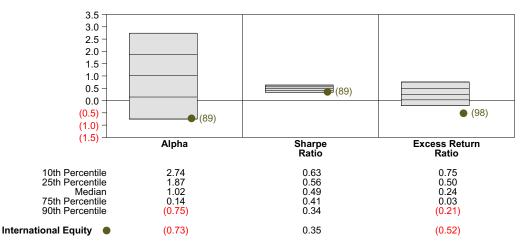

Cumulative and Quarterly Relative Return vs International Benchmark

Current Holdings Based Style Analysis International Equity As of March 31, 2019

This page analyzes the current investment style of a portfolio utilizing a detailed holdings-based style analysis to determine actual exposures to various regional and style segments of the international/global equity market. The market is segmented quarterly by region and style. The style segments are determined using the "Combined Z Score", based on the eight fundamental factors used in the MSCI stock style scoring system. The upper-left style map illustrates the current market capitalization and style score of the portfolio relative to indices and/or peers. The upper-right style exposure matrix displays the current portfolio and index weights and stock counts (in parentheses) in each region/style segment of the market. The middle chart illustrates the total exposures and stock counts in the three style segments, with a legend showing the total growth, value, and "combined Z" (growth - value) scores. The bottom chart exhibits the sector weights as well as the style weights within each sector.

Country Allocation International Equity VS Intl Eq - Benchmark Characteristics

Country Allocation

The chart below contrasts the portfolio's country allocation with that of the index as of March 31, 2019. This chart is useful because large deviations in country allocation relative to the index are often good predictors of tracking error in the subsequent quarter. To the extent that the portfolio allocation is similar to the index, the portfolio should experience more "index-like" performance. In order to illustrate the performance effect on the portfolio and index of these country allocations, the individual index country returns are also shown.

SSgA EAFE Equity Characteristics Analysis Summary

Portfolio Characteristics

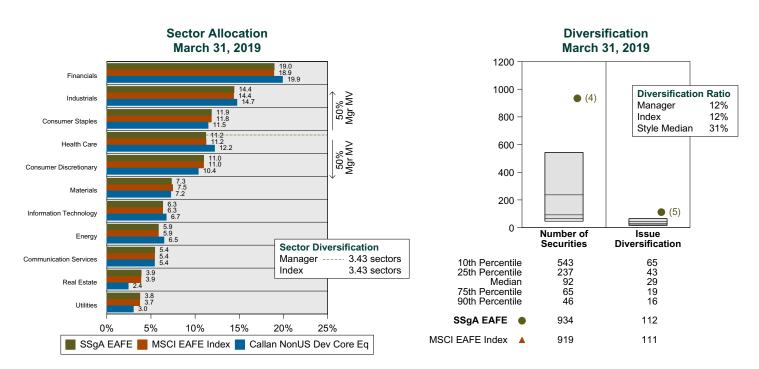

This graph compares the manager's portfolio characteristics with the range of characteristics for the portfolios which make up the manager's style group. This analysis illustrates whether the manager's current holdings are consistent with other managers employing the same style.

Portfolio Characteristics Percentile Rankings Rankings Against Callan Non-US Developed Core Equity as of March 31, 2019

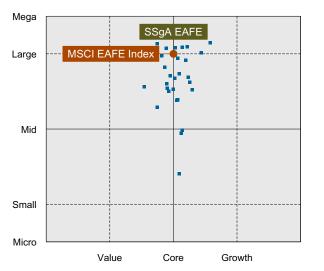

Sector Weights

The graph below contrasts the manager's sector weights with those of the benchmark and median sector weights across the members of the peer group. The magnitude of sector weight differences from the index and the manager's sector diversification are also shown. Diversification by number and concentration of holdings are also compared to the benchmark and peer group. Issue Diversification represents by count, and Diversification Ratio by percent, the number of holdings that account for half of the portfolio's market value.

Current Holdings Based Style Analysis SSgA EAFE As of March 31, 2019

This page analyzes the current investment style of a portfolio utilizing a detailed holdings-based style analysis to determine actual exposures to various regional and style segments of the international/global equity market. The market is segmented quarterly by region and style. The style segments are determined using the "Combined Z Score", based on the eight fundamental factors used in the MSCI stock style scoring system. The upper-left style map illustrates the current market capitalization and style score of the portfolio relative to indices and/or peers. The upper-right style exposure matrix displays the current portfolio and index weights and stock counts (in parentheses) in each region/style segment of the market. The middle chart illustrates the total exposures and stock counts in the three style segments, with a legend showing the total growth, value, and "combined Z" (growth - value) scores. The bottom chart exhibits the sector weights as well as the style weights within each sector.

Sector Weights Distribution Holdings as of March 31, 2019

Country Allocation SSgA EAFE VS MSCI EAFE Index

Country Allocation

The chart below contrasts the portfolio's country allocation with that of the index as of March 31, 2019. This chart is useful because large deviations in country allocation relative to the index are often good predictors of tracking error in the subsequent quarter. To the extent that the portfolio allocation is similar to the index, the portfolio should experience more "index-like" performance. In order to illustrate the performance effect on the portfolio and index of these country allocations, the individual index country returns are also shown.

Pyrford Period Ended March 31, 2019

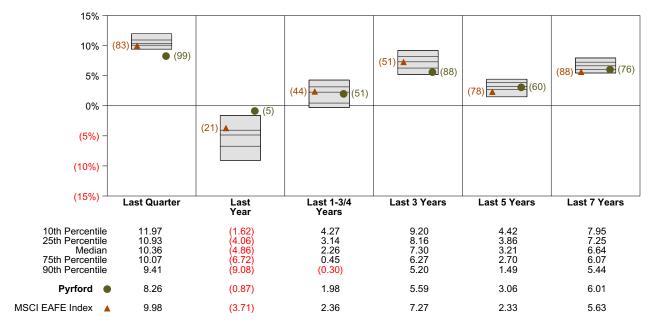

Investment Philosophy

Pyrford's investment strategy is based on a value-driven, absolute return approach, with both top-down and bottom-up elements. At the country level they seek to invest in countries that offer an attractive market valuation relative to their long-term prospects. At the stock level they identify companies that offer excellent value relative to in-house forecasts of long-term (5 years) earnings growth. This approach is characterized by low absolute volatility and downside protection. Returns prior to 6/30/2017 are linked to a composite history.

Quarterly Summary and Highlights

- Pyrford's portfolio posted a 8.26% return for the quarter placing it in the 99 percentile of the Callan Non-US Developed Core Equity group for the quarter and in the 5 percentile for the last year.
- Pyrford's portfolio underperformed the MSCI EAFE Index by 1.72% for the quarter and outperformed the MSCI EAFE Index for the year by 2.85%.

Country Allocation

The chart below contrasts the portfolio's country allocation with that of the index as of March 31, 2019. This chart is useful because large deviations in country allocation relative to the index are often good predictors of tracking error in the subsequent quarter. To the extent that the portfolio allocation is similar to the index, the portfolio should experience more "index-like" performance. In order to illustrate the performance effect on the portfolio and index of these country allocations, the individual index country returns are also shown.

DFA Emerging Markets Equity Characteristics Analysis Summary

Portfolio Characteristics

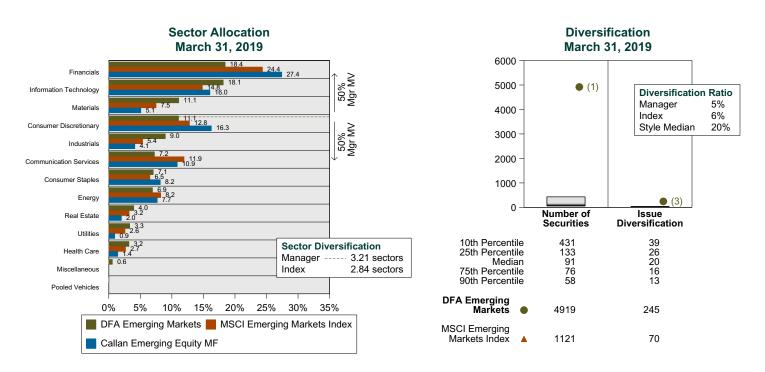

This graph compares the manager's portfolio characteristics with the range of characteristics for the portfolios which make up the manager's style group. This analysis illustrates whether the manager's current holdings are consistent with other managers employing the same style.

Portfolio Characteristics Percentile Rankings Rankings Against Callan Emerging Markets Equity Mut Funds as of March 31, 2019

Sector Weights

The graph below contrasts the manager's sector weights with those of the benchmark and median sector weights across the members of the peer group. The magnitude of sector weight differences from the index and the manager's sector diversification are also shown. Diversification by number and concentration of holdings are also compared to the benchmark and peer group. Issue Diversification represents by count, and Diversification Ratio by percent, the number of holdings that account for half of the portfolio's market value.

Current Holdings Based Style Analysis DFA Emerging Markets As of March 31, 2019

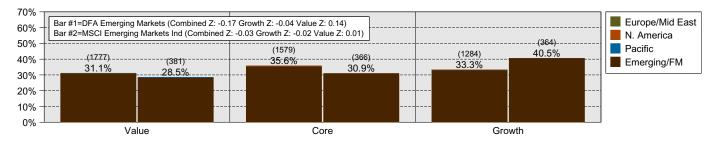

This page analyzes the current investment style of a portfolio utilizing a detailed holdings-based style analysis to determine actual exposures to various regional and style segments of the international/global equity market. The market is segmented quarterly by region and style. The style segments are determined using the "Combined Z Score", based on the eight fundamental factors used in the MSCI stock style scoring system. The upper-left style map illustrates the current market capitalization and style score of the portfolio relative to indices and/or peers. The upper-right style exposure matrix displays the current portfolio and index weights and stock counts (in parentheses) in each region/style segment of the market. The middle chart illustrates the total exposures and stock counts in the three style segments, with a legend showing the total growth, value, and "combined Z" (growth - value) scores. The bottom chart exhibits the sector weights as well as the style weights within each sector.

Risk/Reward Statistics

The risk statistics used in this report examine performance characteristics of a manager or a portfolio relative to a benchmark (market indicator) which assumes to represent overall movements in the asset class being considered. The main unit of analysis is the excess return, which is the portfolio return minus the return on a risk free asset (3 month T-Bill).

Alpha measures a portfolio's return in excess of the market return adjusted for risk. It is a measure of the manager's contribution to performance with reference to security selection. A positive alpha indicates that a portfolio was positively rewarded for the residual risk which was taken for that level of market exposure.

Beta measures the sensitivity of rates of portfolio returns to movements in the market index. A portfolio's beta measures the expected change in return per 1% change in the return on the market. If a beta of a portfolio is 1.5, a 1 percent increase in the return on the market will result, on average, in a 1.5 percent increase in the return on the portfolio. The converse would also be true.

Downside Risk stems from the desire to differentiate between "good risk" (upside volatility) and "bad risk" (downside volatility). Whereas standard deviation punishes both upside and downside volatility, downside risk measures only the standard deviation of returns below the target. Returns above the target are assigned a deviation of zero. Both the frequency and magnitude of underperformance affect the amount of downside risk.

Excess Return Ratio is a measure of risk adjusted relative return. This ratio captures the amount of active management performance (value added relative to an index) per unit of active management risk (tracking error against the index.) It is calculated by dividing the manager's annualized cumulative excess return relative to the index by the standard deviation of the individual quarterly excess returns. The Excess Return Ratio can be interpreted as the manager's active risk/reward tradeoff for diverging from the index when the index is mandated to be the "riskless" market position.

Information Ratio measures the manager's market risk-adjusted excess return per unit of residual risk relative to a benchmark. It is computed by dividing alpha by the residual risk over a given time period. Assuming all other factors being equal, managers with lower residual risk achieve higher values in the information ratio. Managers with higher information ratios will add value relative to the benchmark more reliably and consistently.

R-Squared indicates the extent to which the variability of the portfolio returns are explained by market action. It can also be thought of as measuring the diversification relative to the appropriate benchmark. An r-squared value of .75 indicates that 75% of the fluctuation in a portfolio return is explained by market action. An r-squared of 1.0 indicates that a portfolio's returns are entirely related to the market and it is not influenced by other factors. An r-squared of zero indicates that no relationship exists between the portfolio's return and the market.

Relative Standard Deviation is a simple measure of a manager's risk (volatility) relative to a benchmark. It is calculated by dividing the manager's standard deviation of returns by the benchmark's standard deviation of returns. A relative standard deviation of 1.20, for example, means the manager has exhibited 20% more risk than the benchmark over that time period. A ratio of .80 would imply 20% less risk. This ratio is especially useful when analyzing the risk of investment grade fixed-income products where actual historical durations are not available. By using this relative risk measure over rolling time periods one can illustrate the "implied" historical duration patterns of the portfolio versus the benchmark.

Residual Portfolio Risk is the unsystematic risk of a fund, the portion of the total risk unique to the fund (manager) itself and not related to the overall market. This reflects the "bets" which the manager places in that particular asset market. These bets may reflect emphasis in particular sectors, maturities (for bonds), or other issue specific factors which the manager considers a good investment opportunity. Diversification of the portfolio will reduce or eliminate the residual risk of that portfolio.

Risk/Reward Statistics

Rising Declining Periods refer to the sub-asset class cycles vis-a-vis the broader asset class. This is determined by evaluating the cumulative relative sub-asset class index performance to that of the broader asset class index. For example, to determine the Growth Style cycle, the S&P 500 Growth Index (sub-asset class) performance is compared to that of the S&P 500 Index (broader asset class).

Sharpe Ratio is a commonly used measure of risk-adjusted return. It is calculated by subtracting the "risk-free" return (usually 3 Month Treasury Bill) from the portfolio return and dividing the resulting "excess return" by the portfolio's risk level (standard deviation). The result is a measure of return gained per unit of risk taken.

Sortino Ratio is a downside risk-adjusted measure of value-added. It measures excess return over a benchmark divided by downside risk. The natural appeal is that it identifies value-added per unit of truly bad risk. The danger of interpretation, however, lies in these two areas: (1) the statistical significance of the denominator, and (2) its reliance on the persistence of skewness in return distributions.

Standard Deviation is a statistical measure of portfolio risk. It reflects the average deviation of the observations from their sample mean. Standard deviation is used as an estimate of risk since it measures how wide the range of returns typically is. The wider the typical range of returns, the higher the standard deviation of returns, and the higher the portfolio risk. If returns are normally distributed (ie. has a bell shaped curve distribution) then approximately 2/3 of the returns would occur within plus or minus one standard deviation from the sample mean.

Total Portfolio Risk is a measure of the volatility of the quarterly excess returns of an asset. Total risk is composed of two measures of risk: market (non-diversifiable or systematic) risk and residual (diversifiable or unsystematic) risk. The purpose of portfolio diversification is to reduce the residual risk of the portfolio.

Tracking Error is a statistical measure of a portfolio's risk relative to an index. It reflects the standard deviation of a portfolio's individual quarterly or monthly returns from the index's returns. Typically, the lower the Tracking Error, the more "index-like" the portfolio.

Treynor Ratio represents the portfolio's average excess return over a specified period divided by the beta relative to its benchmark over that same period. This measure reflects the reward over the risk-free rate relative to the systematic risk assumed.

Note: Alpha, Total Risk, and Residual Risk are annualized.

New Research from Callan's Experts

<u>Callan's 2019-2028 Capital Market Projections</u> | Callan develops long-term capital market projections at the start of each year, detailing our expectations for return, volatility, and correlation for broad

asset classes. For 2019-2028, we made gradual, evolutionary changes to our expectations from our projections last year. We increased our fixed income assumptions to reflect higher starting yields compared to one year ago, including a higher return for cash, but we held constant our equity return premium over cash. As a result, we have narrowed the equity risk premium over bonds.

Two Questions to Help DC Plans Save on Litigation Costs | Executives can monitor whether in-house fiduciaries for their defined contribution plans are on track or need assistance by asking these questions: 1) Are plan administration costs too high? 2) Are participants getting the best "bang for their buck" from investment fees?

The Good, the Bad, and the Ugly: Which Will Your DC Plan Be in 2019? | In this paper, we outline best practices for defined contribution (DC) plan sponsors that aspire to be the Good gunslinger, and flag traps that could ensnare them in Bad or even Ugly territory.

2019 DC Trends Survey | Callan's 12th Annual DC Trends Survey highlights plan sponsors' key themes from 2018 and expectations for 2019.

2019 National Workshop Summary: DC Plans | This workshop by Callan's Ben Taylor, Jana Steele, and Gordon Weightman, "The New Face of DC Plans," provided what plan sponsors and investment managers need to know to stay current on new developments and how they might benefit plans.

2019 National Workshop Summary: Private Equity | In their workshop, "Private Equity: Primary Investment Opportunities and Considerations," Callan's Pete Keliuotis, Jay Nayak, and Weston Lewis demonstrated how a thoughtful approach to program design, strategy allocation, and capital commitment pacing can lead to long-term success in private equity investing.

2019 National Workshop Summary: Strategic Allocations | In this workshop, Callan's Ann O'Bradovich, Ho Hwang, and Gary Chang discussed the trend over the past several decades in which U.S. institutional investors have shifted their public equity portfolios to increase allocations to non-U.S. stocks.

The Callan Periodic Table Collection: Year-End 2018 | The Periodic Table Collection offers versions focused on equity, fixed income, fund sponsors, and alternatives. Other tables compare the performance of key indices to zero and to inflation.

Quarterly Periodicals

Private Equity Trends | A newsletter on private equity activity, covering both the fundraising cycle and performance over time.

<u>Market Pulse Flipbook</u> | A market reference guide covering trends in the U.S. economy, developments for fund sponsors, and the latest data for U.S. and non-U.S. equities and fixed income, alternatives, and defined contribution plans.

Active vs. Passive Charts | This series of charts compares active managers alongside relevant benchmarks over the long term.

<u>Capital Market Review</u> | Provides analysis and a broad overview of the economy and public and private market activity each quarter across a wide range of asset classes.

Events

Miss out on a Callan conference or workshop? Event summaries and speakers' presentations are available on our website: www.callan.com/library/

Please mark your calendar and look forward to upcoming invitations.

June Regional Workshops: June 4, 2019 – Atlanta June 5, 2019 – San Francisco

October Regional Workshops:

October 22, 2019 – Denver October 24, 2019 – Chicago

Invitations have been sent for June and registration is available on our website at www.callan.com/events-reg-workshop-june/

Please also keep your eye out for upcoming Webinars in 2019! We will be sending invitations for these and also will have registration links on our website at www.callan.com/events.

For more information about events, please contact Barb Gerraty: 415.274.3093 / gerraty@callan.com

The Center for Investment Training Educational Sessions

The Center for Investment Training, better known as the "Callan College," provides a foundation of knowledge for industry professionals who are involved in the investment decision-making process. It was founded in 1994 to provide clients and non-clients alike with basic- to intermediate-level instruction. Our next sessions are:

Introduction to Investments

San Francisco, July 16-17, 2019 Chicago, October 22-23, 2019

This program familiarizes fund sponsor trustees, staff, and asset management advisers with basic investment theory, terminology, and practices. It lasts one-and-a-half days and is designed for individuals who have less than two years of experience with assetmanagement oversight and/or support responsibilities. Tuition for the Introductory "Callan College" session is \$2,350 per person. Tuition includes instruction, all materials, breakfast and lunch on each day, and dinner on the first evening with the instructors.

"Callan College" on Alternative Investing Chicago, October 2019—Date TBD

Learn more at www.callan.com/events/callan-college-intro or contact Kathleen Cunnie: 415.274.3029 / cunnie@callan.com

Education: By the Numbers

525	Attendees (on average) of the Institute's annual National Conference	50+	Unique pieces of research the Institute generates each year
3,700	Total attendees of the "Callan College" since 1994	1980	Year the Callan Institute was founded

"Research is the foundation of all we do at Callan, and sharing our best thinking with the investment community is our way of helping to foster dialogue to raise the bar across the industry."

Greg Allen, CEO and Chief Research Officer

Disclosures

List of Callan's Investment Manager Clients

Confidential - For Callan Client Use Only

Callan takes its fiduciary and disclosure responsibilities to clients very seriously. We recognize that there are numerous potential conflicts of interest encountered in the investment consulting industry and that it is our responsibility to manage those conflicts effectively and in the best interest of our clients. At Callan, we employ a robust process to identify, manage, monitor and disclose potential conflicts on an on-going basis.

The list below is an important component of our conflicts management and disclosure process. It identifies those investment managers that pay Callan fees for educational, consulting, software, database or reporting products and services. We update the list quarterly because we believe that our fund sponsor clients should know the investment managers that do business with Callan, particularly those investment manager clients that the fund sponsor clients may be using or considering using. Please note that if an investment manager receives a product or service on a complimentary basis (e.g. attending and educational event), they are not included in the list below. Callan is committed to ensuring that we do not consider an investment manager's business relationship with Callan, or lack thereof, in performing evaluations for or making suggestions or recommendations to its other clients. Please refer to Callan's ADV Part 2A for a more detailed description of the services and products that Callan makes available to investment manager clients through our Institutional Consulting Group, Independent Adviser Group and Fund Sponsor Consulting Group. Due to the complex corporate and organizational ownership structures of many investment management firms, parent and affiliate firm relationships are not indicated on our list.

Fund sponsor clients may request a copy of the most currently available list at any time. Fund sponsor clients may also request specific information regarding the fees paid to Callan by particular fund manager clients. Per company policy, information requests regarding fees are handled exclusively by Callan's Compliance Department.

Capital Markets Review

U.S. EQUITY

Equity markets dramatically snapped back in the first quarter, driven by the Fed's unexpected dovish comments in January, solid corporate fundamentals, and low unemployment.

Large Cap U.S. Equity (S&P 500: +13.6%; Russell 1000: +14.0%)

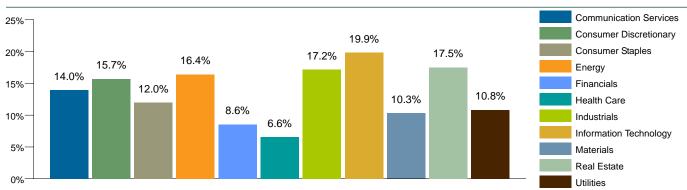

- All sectors delivered double-digit gains with the exception of Financials (+8.6%) and Health Care (+6.6%).
- Consumers remain in good shape, with household debt service as a percentage of disposable income at the lowest level in decades.
- The risk-on market was highlighted by low quality (S&P ratings B or lower) outperforming high quality (B+ or higher) by 440 basis points.
- Surprisingly, Utilities and REITs produced double-digit returns; investors sought yield in the face of a flattening yield curve and the end to rate hikes in the first quarter.

Growth vs. Value (Russell 1000 Growth: +16.1%; Russell 1000 Value: +11.9%)

- The sharp change in Fed rhetoric influenced the stronger performance of growth stocks over value stocks during the quarter. Investors favored companies with stronger earnings prospects to counter a softer economic environment.
- Technology produced strong results, while the outlook for Financials weakened as the yield curve flattened.

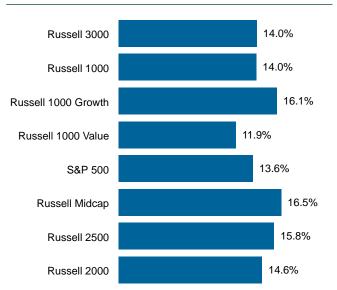

Small Cap (Russell 2000: +14.6%; Russell 2000 Growth: +17.1%; Russell 2000 Value: +11.9%)

- Within the Russell 2000 Growth Index, the three largest sectors (Health Care, Consumer Discretionary, and Technology) surged 19%, 17%, and 23%, respectively. Software and biotechnology both posted 25% gains in the quarter; combined they are more than 23% of the benchmark weight.
- Influenced by excessive fourth quarter tax-loss selling, the market experienced a strong "January effect"—where last year's losers became January 2019's winners.

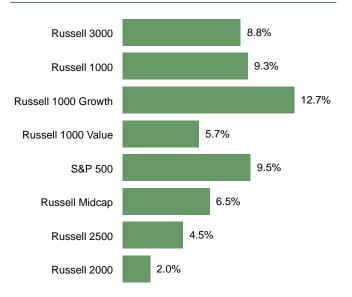

S&P Sector Returns, Quarter Ended March 31, 2019

U.S. Equity: Quarterly Returns

U.S. Equity: One-Year Returns

Source: Standard & Poor's

NON-U.S./GLOBAL EQUITY

Global equity markets were positive in the first quarter following a sharp sell-off to end 2018. Investors resumed a risk-on outlook as central banks telegraphed more accommodative positioning. Delayed outcomes regarding U.S./China trade talks and Brexit negotiations allowed markets to stabilize, although uncertain outcomes remain a future risk.

Global/Non-U.S. Developed (MSCI EAFE: +10.0%; MSCI World ex USA: +10.4%; MSCI ACWI ex USA: +10.3%; MSCI Europe: +10.8%; MSCI Japan: +6.7%)

- Developed markets rallied as central banks around the world expressed more accommodative paths with interest rates and quantitative easing.
- Brexit negotiations continue and a "no-deal" Brexit remains a possibility, but with an extended deadline. The potential for investment paralysis drags on.
- European PMI continued to deteriorate, falling to 47.7 in March from 49.4.
- The currency effect was mixed as the U.S. dollar rose against the euro and yen, by 1.8% and 0.9%, but fell against the British pound by 2.3% as a delay in Brexit allowed for a temporary bounce.
- EAFE sector performance was mixed. Information Technology (+15.3%) and Materials (+13.2%) led economically sensitive sectors; Consumer Staples (+12.4%) led defensive sectors. Interest rate-sensitive Financials (+6.9%) and Utilities (+9.0%) trailed the broad index.
- Factor performance favored growth (historical and projected) while value factors were generally negative.

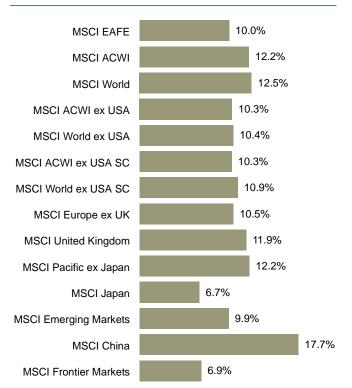

Emerging Markets (MSCI Emerging Markets Index: +9.9%)

- In a big reversal from the fourth quarter, China led emerging markets with MSCI China gaining 17.7% and MSCI China A up 30.9%.
- Trade talks continue but positive indications for a deal buoyed markets; uncertainty on the outcome remains.
- Asian Information Technology rebounded nicely with Chinese IT (+27.6%) leading the sector. An improving outlook on Chinese consumption positively influenced EM Consumer Discretionary (+20.8%), which was the topperforming sector.
- Growth led value with MSCI EM Growth gaining 12.0% and EM Value up 7.8%.

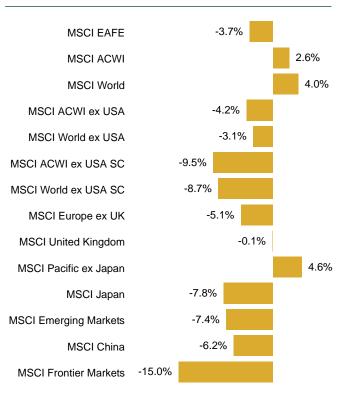

Non-U.S. Small Cap (MSCI World ex USA Small Cap: +10.9%; MSCI EM Small Cap: +7.8%; MSCI ACWI ex USA Small Cap: +10.3%)

- Within developed markets, small cap performed in line with large cap.
- EM Small Cap trailed EM as MSCI China Small Cap has less exposure to IT, which led the risk-on rally.

Global Equity: One-Year Returns

Source: MSCI

U.S. FIXED INCOME

Risk markets sharply reversed from the fourth quarter sell-off supported by the Fed's unexpected dovish comments, relatively solid U.S. economic growth data, and tempered concern over a slowing China. This quarter's strong results recaptured most of the loss experienced in the prior quarter.

U.S. Fixed Income (Bloomberg Barclays US Aggregate: +2.9%)

- U.S. Treasuries rose 2.1% as the yield curve shifted lower across maturities as growth and inflation expectations declined.
- The shape of the yield curve did not materially change during the quarter. The yield differential between the 10-year and 2-year key rates remained positive and traded around a range of +12 to +20 bps. However, the front-end of the curve inverted, with the 5-year offering less yield than the 2-year.
- TIPS outperformed nominal Treasuries as the Fed's balanced stance and unexpected wage pressures stoked higher inflation expectation.

Investment-Grade Corporates (Bloomberg Barclays Corporate: +5.1%)

- Credit spreads rallied on the back of a softer Fed stance, positive economic news, and better than expected corporate earnings.
- Net new corporate issuance during the first quarter of \$117 billion was roughly on par with a year ago.
- Surprisingly, Aaa-rated corporates (+5.0%) outperformed Aa- (+3.7%) and single A-rated issuers (+4.7%). BBB-rated issuers were the best performers (+5.7%).

High Yield (Bloomberg Barclays Corporate High Yield: +7.3%)

- Given the risk-on environment, below-investment grade issuers were the best performers, aided by strong asset inflows.
- Ba/B sectors (+7.2%) marginally outpaced CCC by 6 bps; this was an unusual occurrence given that the dispersion between high-quality and low-quality is typically wide during these periods of absolute returns.

Leveraged Loans (Credit Suisse Leveraged Loans Index: +3.8%)

- Leveraged loans participated in the rally but lagged both longer duration investment grade and high yield corporates. The sector was negatively impacted by the Fed's pause, retail outflows, and a slow-developing CLO pipeline.
- Bank loans have less sensitivity to interest rates but may have a similar spread duration profile to that of their high yield bond counterparts.

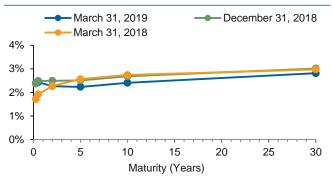

U.S. Fixed Income: Quarterly Returns

U.S. Fixed Income: One-Year Returns

U.S. Treasury Yield Curves

Sources: Bloomberg, Bloomberg Barclays, Credit Suisse

NON-U.S. FIXED INCOME

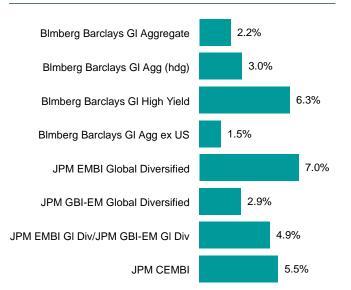

Global Fixed Income (Bloomberg Barclays Global Aggregate (unhedged): +2.2%)

 Developed market sovereign bonds rallied in tandem with Treasuries. The U.S. dollar appreciated modestly versus the euro and yen, but lost ground versus the British pound and Canadian dollar.

U.S. dollar-denominated emerging market debt (JPM EMBI Global Diversified: +7.0%), Local currency-denominated EMD (JPM GBI-EM Global Diversified: +2.9%)

- Country returns within the EMBI Global Diversified Index were all positive for the quarter.
- Turkey (-10.2%) and Argentina (-10.5%) were notable underperformers in the local currency index.
- Positive net inflows into the EM universe continued through quarter-end.

Quarterly Total Fund Relative Attribution - March 31, 2019

The following analysis approaches Total Fund Attribution from the perspective of relative return. Relative return attribution separates and quantifies the sources of total fund excess return relative to its target. This excess return is separated into two relative attribution effects: Asset Allocation Effect and Manager Selection Effect. The Asset Allocation Effect represents the excess return due to the actual total fund asset allocation differing from the target asset allocation. Manager Selection Effect represents the total fund impact of the individual managers excess returns relative to their benchmarks.

Asset Class Under or Overweighting

Actual vs Target Returns

Relative Attribution Effects for Quarter ended March 31, 2019

Asset Class	Effective Actual Weight	Effective Target Weight	Actual Return	Target Return	Manager Effect	Asset Allocation	Total Relative Return

Relative Attribution by Asset Class

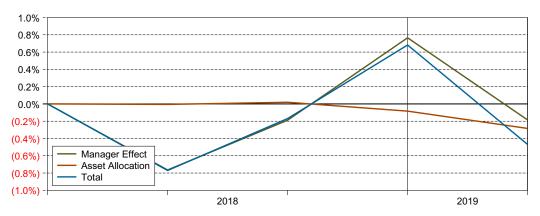

Cumulative Total Fund Relative Attribution - March 31, 2019

The charts below accumulate the Total Fund Attribution Analysis (shown earlier) over multiple periods to examine the cumulative sources of excess total fund performance relative to target. These cumulative results quantify the longer-term sources of total fund excess return relative to target by asset class. These relative attribution effects separate the cumulative sources of total fund excess return into Asset Allocation Effect and Manager Selection Effect.

Quarterly Summary and Highlights

- Total Fund's portfolio posted a 7.80% return for the quarter placing it in the 69 percentile of the Callan Public Fund Spons- Mid (100M-1B) group for the quarter and in the 76 percentile for the last year.
- Total Fund's portfolio underperformed the Target by 1.27% for the quarter and underperformed the Target for the year by 0.47%.

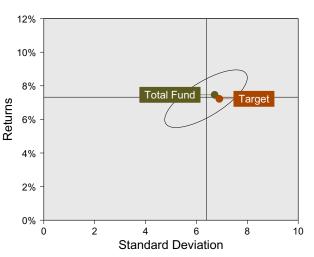

Performance vs Callan Public Fund Spons- Mid (100M-1B) (Gross)

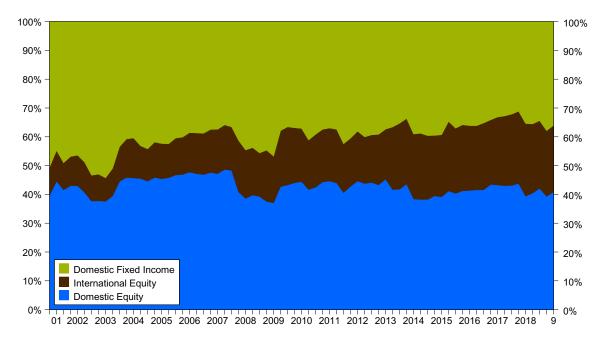

Relative Return vs Target

Callan Public Fund Spons- Mid (100M-1B) (Gross) Annualized Seven Year Risk vs Return

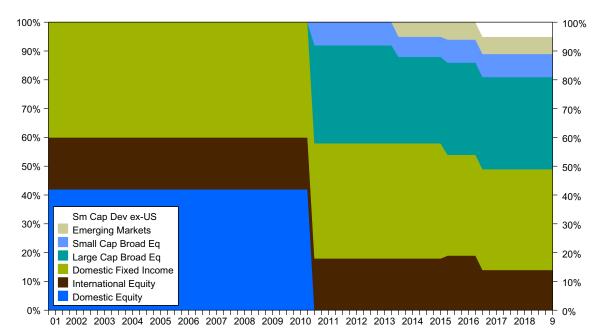

Actual vs Target Historical Asset Allocation

The Historical asset allocation for a fund is by far the largest factor explaining its performance. The charts below show the fund's historical actual asset allocation, and the fund's historical target asset allocation.

Target Historical Asset Allocation

* Current Quarter Target = 35.0% Blmbg Aggregate, 32.0% S&P 500 Index, 14.0% MSCI EAFE, 8.0% Russell 2000 Index, 6.0% MSCI EM and 5.0% MSCI EAFE Small Cap.

Investment Manager Asset Allocation

The table below contrasts the distribution of assets across the Fund's investment managers as of March 31, 2019, with the distribution as of December 31, 2018. The change in asset distribution is broken down into the dollar change due to Net New Investment and the dollar change due to Investment Return.

Current Holdings Based Style Analysis Domestic Equity As of March 31, 2019

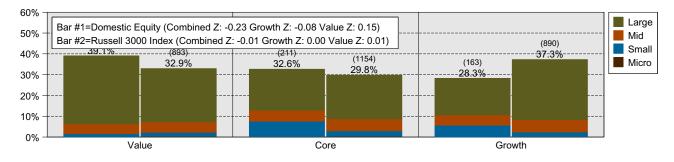

This page analyzes the current investment style of a portfolio utilizing a detailed holdings-based style analysis to determine actual exposures to various market capitalization and style segments of the domestic equity market. The market is segmented quarterly by capitalization and style. The capitalization segments are dictated by capitalization decile breakpoints. The style segments are determined using the "Combined Z Score", based on the eight fundamental factors used in the MSCI stock style scoring system. The upper-left style map illustrates the current market capitalization and style score of the portfolio relative to indices and/or peers. The upper-right style exposure matrix displays the current portfolio and index weights and stock counts (in parentheses) in each capitalization/style segment of the market. The middle chart illustrates the total exposures and stock counts in the three style segments, with a legend showing the total growth, value, and "combined Z" (growth - value) scores. The bottom chart exhibits the sector weights as well as the style weights within each sector.

Atlanta Capital Period Ended March 31, 2019

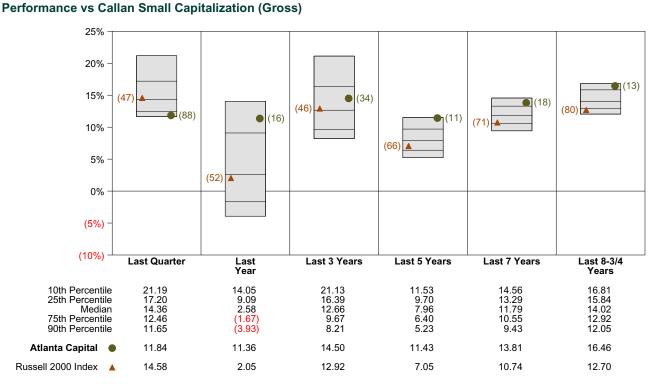

Investment Philosophy

Atlanta believes that high quality companies produce consistently increasing earnings and dividends, thereby providing attractive returns with moderate risk over the long-term. Returns prior to 6/30/2010 are linked to a composite history.

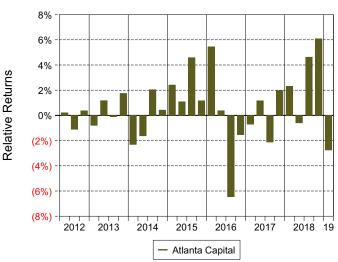

Quarterly Summary and Highlights

- Atlanta Capital's portfolio posted a 11.84% return for the quarter placing it in the 88 percentile of the Callan Small Capitalization group for the quarter and in the 16 percentile for the last year.
- Atlanta Capital's portfolio underperformed the Russell 2000 Index by 2.74% for the quarter and outperformed the Russell 2000 Index for the year by 9.31%.

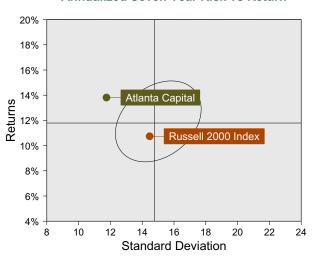

Quarterly Asset Growth							
Beginning Market Value	\$22,212,390						
Net New Investment	\$0						
Investment Gains/(Losses)	\$2,629,792						
Ending Market Value	\$24,842,181

Atlanta Capital Return Analysis Summary

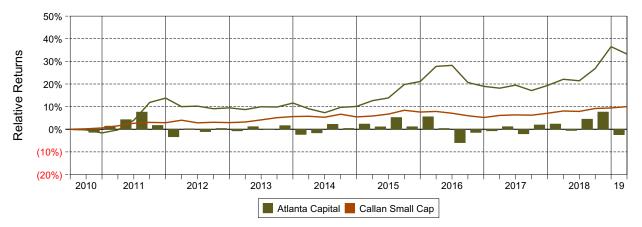

Return Analysis

The graphs below analyze the manager's return on both a risk-adjusted and unadjusted basis. The first chart illustrates the manager's ranking over different periods versus the appropriate style group. The second chart shows the historical quarterly and cumulative manager returns versus the appropriate market benchmark. The last chart illustrates the manager's ranking relative to their style using various risk-adjusted return measures.

Atlanta Capital Equity Characteristics Analysis Summary

Portfolio Characteristics

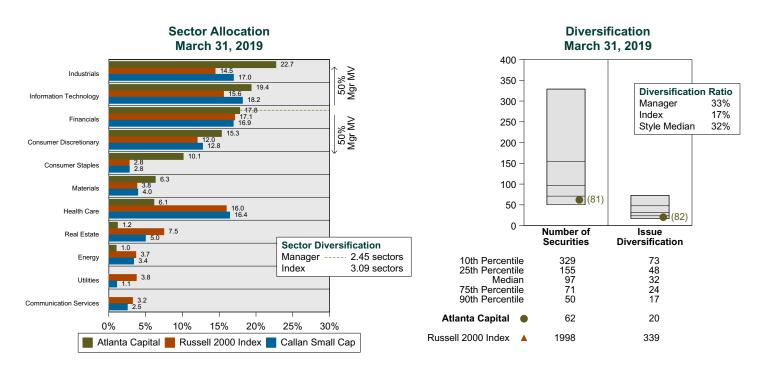

This graph compares the manager's portfolio characteristics with the range of characteristics for the portfolios which make up the manager's style group. This analysis illustrates whether the manager's current holdings are consistent with other managers employing the same style.

Portfolio Characteristics Percentile Rankings Rankings Against Callan Small Capitalization as of March 31, 2019

Sector Weights

The graph below contrasts the manager's sector weights with those of the benchmark and median sector weights across the members of the peer group. The magnitude of sector weight differences from the index and the manager's sector diversification are also shown. Diversification by number and concentration of holdings are also compared to the benchmark and peer group. Issue Diversification represents by count, and Diversification Ratio by percent, the number of holdings that account for half of the portfolio's market value.

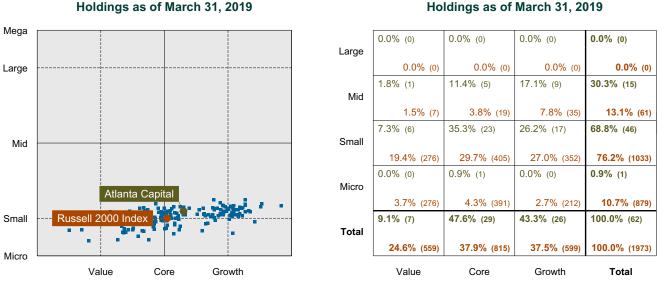

Current Holdings Based Style Analysis Atlanta Capital As of March 31, 2019

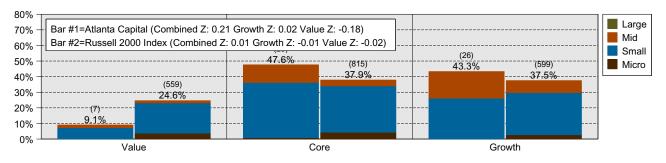

This page analyzes the current investment style of a portfolio utilizing a detailed holdings-based style analysis to determine actual exposures to various market capitalization and style segments of the domestic equity market. The market is segmented quarterly by capitalization and style. The capitalization segments are dictated by capitalization decile breakpoints. The style segments are determined using the "Combined Z Score", based on the eight fundamental factors used in the MSCI stock style scoring system. The upper-left style map illustrates the current market capitalization and style score of the portfolio relative to indices and/or peers. The upper-right style exposure matrix displays the current portfolio and index weights and stock counts (in parentheses) in each capitalization/style segment of the market. The middle chart illustrates the total exposures and stock counts in the three style segments, with a legend showing the total growth, value, and "combined Z" (growth - value) scores. The bottom chart exhibits the sector weights as well as the style weights within each sector.

Historical Holdings Based Style Analysis Atlanta Capital For Five Years Ended March 31, 2019

This page analyzes the historical investment style of a portfolio utilizing a detailed holdings-based style analysis to determine average actual exposures to various market capitalization and style segments of the domestic equity market. The market is segmented quarterly by capitalization and style. The capitalization segments are dictated by capitalization decile breakpoints. The style segments are determined using the "Combined Z Score", based on the eight fundamental factors used in the MSCI stock style scoring system. The upper-left style map illustrates the average historical market capitalization and style score of the portfolio relative to indices and/or peers. The upper-right style exposure matrix displays the average historical portfolio and index weights and stock counts (in parentheses) in each capitalization/style segment of the market. The next two style exposure charts illustrate the actual quarterly cap/style and style only segment exposures of the portfolio through history.

International Equity Return Analysis Summary

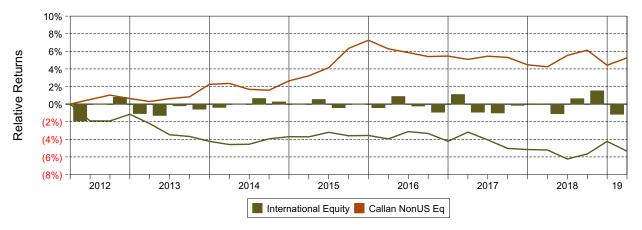

Return Analysis

The graphs below analyze the manager's return on both a risk-adjusted and unadjusted basis. The first chart illustrates the manager's ranking over different periods versus the appropriate style group. The second chart shows the historical quarterly and cumulative manager returns versus the appropriate market benchmark. The last chart illustrates the manager's ranking relative to their style using various risk-adjusted return measures.

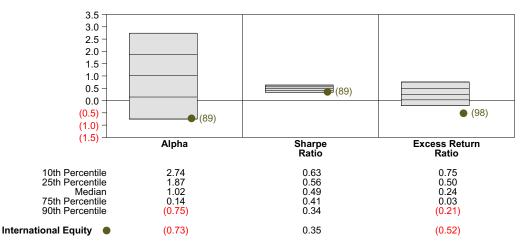

Cumulative and Quarterly Relative Return vs International Benchmark

Current Holdings Based Style Analysis International Equity As of March 31, 2019

This page analyzes the current investment style of a portfolio utilizing a detailed holdings-based style analysis to determine actual exposures to various regional and style segments of the international/global equity market. The market is segmented quarterly by region and style. The style segments are determined using the "Combined Z Score", based on the eight fundamental factors used in the MSCI stock style scoring system. The upper-left style map illustrates the current market capitalization and style score of the portfolio relative to indices and/or peers. The upper-right style exposure matrix displays the current portfolio and index weights and stock counts (in parentheses) in each region/style segment of the market. The middle chart illustrates the total exposures and stock counts in the three style segments, with a legend showing the total growth, value, and "combined Z" (growth - value) scores. The bottom chart exhibits the sector weights as well as the style weights within each sector.

Historical Holdings Based Style Analysis International Equity For Five Years Ended March 31, 2019

This page analyzes the historical investment style of a portfolio utilizing a detailed holdings-based style analysis to determine average actual exposures to various region and style segments of the international/global equity market. The market is segmented quarterly by region and style. The style segments are determined using the "Combined Z Score", based on the eight fundamental factors used in the MSCI stock style scoring system. The upper-left style map illustrates the average historical market capitalization and style score of the portfolio relative to indices and/or peers. The upper-right style exposure matrix displays the average historical portfolio and index weights and stock counts (in parentheses) in each region/style segment of the market. The next two style exposure charts illustrate the actual quarterly region/style and style only segment exposures of the portfolio through history.

Country Allocation

The chart below contrasts the portfolio's country allocation with that of the index as of March 31, 2019. This chart is useful because large deviations in country allocation relative to the index are often good predictors of tracking error in the subsequent quarter. To the extent that the portfolio allocation is similar to the index, the portfolio should experience more "index-like" performance. In order to illustrate the performance effect on the portfolio and index of these country allocations, the individual index country returns are also shown.

Country Weights as of March 31, 2019

SSqA EAFE Period Ended March 31, 2019

Investment Philosophy

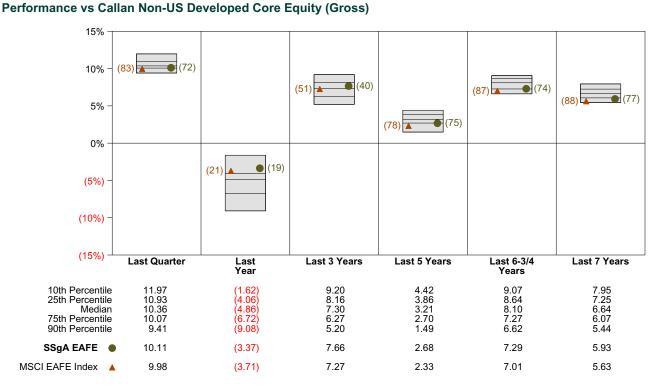

SSGA's objective is to provide the most cost-effective implementation of passive investing with stringent risk control and tracking requirements through a replication method. Returns prior to 6/30/2012 are linked to a composite history.

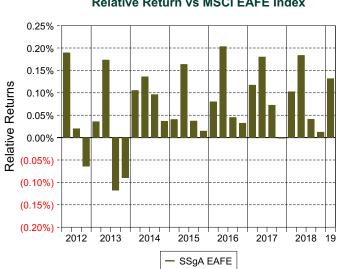

Quarterly Summary and Highlights

• SSgA EAFE's portfolio posted a 10.11% return for the quarter placing it in the 72 percentile of the Callan Non-US Developed Core Equity group for the quarter and in the 19 percentile for the last year.

٠	SSgA EAFE's portfolio outperformed the MSCI EAFE Index
	by 0.13% for the quarter and outperformed the MSCI EAFE
	Index for the year by 0.35%.

Pyrford Period Ended March 31, 2019

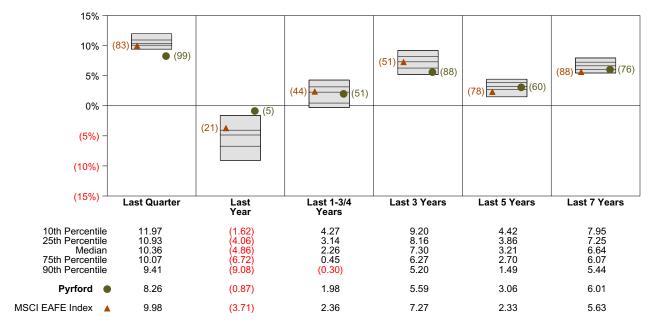

Investment Philosophy

Pyrford's investment strategy is based on a value-driven, absolute return approach, with both top-down and bottom-up elements. At the country level they seek to invest in countries that offer an attractive market valuation relative to their long-term prospects. At the stock level they identify companies that offer excellent value relative to in-house forecasts of long-term (5 years) earnings growth. This approach is characterized by low absolute volatility and downside protection. Returns prior to 6/30/2017 are linked to a composite history.

Quarterly Summary and Highlights

- Pyrford's portfolio posted a 8.26% return for the quarter placing it in the 99 percentile of the Callan Non-US Developed Core Equity group for the quarter and in the 5 percentile for the last year.
- Pyrford's portfolio underperformed the MSCI EAFE Index by 1.72% for the quarter and outperformed the MSCI EAFE Index for the year by 2.85%.

Pyrford Equity Characteristics Analysis Summary

Portfolio Characteristics

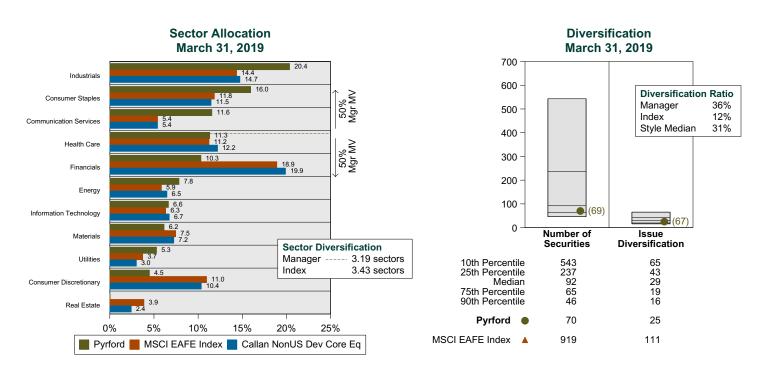

This graph compares the manager's portfolio characteristics with the range of characteristics for the portfolios which make up the manager's style group. This analysis illustrates whether the manager's current holdings are consistent with other managers employing the same style.

Portfolio Characteristics Percentile Rankings Rankings Against Callan Non-US Developed Core Equity as of March 31, 2019

Sector Weights

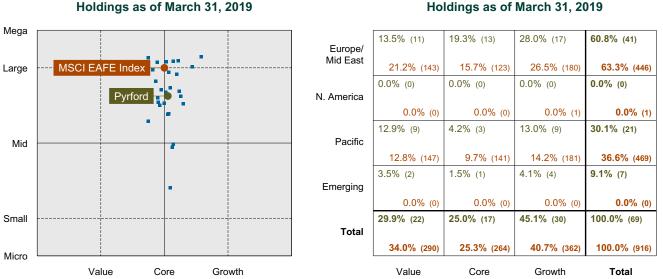

The graph below contrasts the manager's sector weights with those of the benchmark and median sector weights across the members of the peer group. The magnitude of sector weight differences from the index and the manager's sector diversification are also shown. Diversification by number and concentration of holdings are also compared to the benchmark and peer group. Issue Diversification represents by count, and Diversification Ratio by percent, the number of holdings that account for half of the portfolio's market value.

Current Holdings Based Style Analysis Pvrford As of March 31, 2019

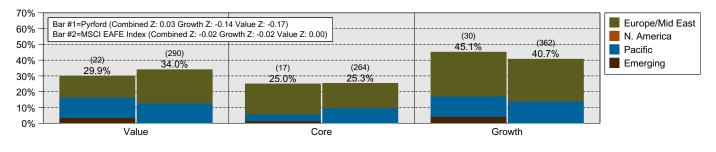

This page analyzes the current investment style of a portfolio utilizing a detailed holdings-based style analysis to determine actual exposures to various regional and style segments of the international/global equity market. The market is segmented quarterly by region and style. The style segments are determined using the "Combined Z Score", based on the eight fundamental factors used in the MSCI stock style scoring system. The upper-left style map illustrates the current market capitalization and style score of the portfolio relative to indices and/or peers. The upper-right style exposure matrix displays the current portfolio and index weights and stock counts (in parentheses) in each region/style segment of the market. The middle chart illustrates the total exposures and stock counts in the three style segments, with a legend showing the total growth, value, and "combined Z" (growth - value) scores. The bottom chart exhibits the sector weights as well as the style weights within each sector.

Country Allocation Pyrford VS MSCI EAFE Index

Country Allocation

The chart below contrasts the portfolio's country allocation with that of the index as of March 31, 2019. This chart is useful because large deviations in country allocation relative to the index are often good predictors of tracking error in the subsequent quarter. To the extent that the portfolio allocation is similar to the index, the portfolio should experience more "index-like" performance. In order to illustrate the performance effect on the portfolio and index of these country allocations, the individual index country returns are also shown.

Domestic Fixed Income

Metropolitan West Period Ended March 31, 2019

Investment Philosophy

Metropolitan West Asset Management (MWAM) attempts to add value by limiting duration, managing the yield curve, rotating among bond market sectors and using proprietary quantitative valuation techniques.

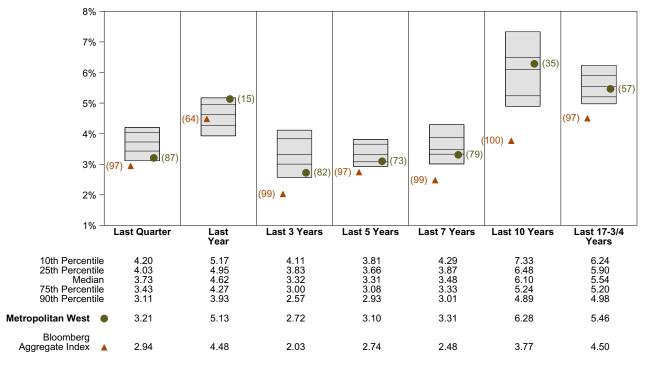

Quarterly Summary and Highlights

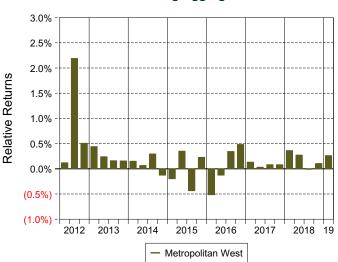

• Metropolitan West's portfolio posted a 3.21% return for the quarter placing it in the 87 percentile of the Callan Core Plus Fixed Income group for the quarter and in the 15 percentile for the last year.

Quarterly Asset Growth							
Beginning Market Value	\$101,895,736						
Net New Investment	\$-1,021,928						
Investment Gains/(Losses)	\$3,253,913						
Ending Market Value	\$104,127,722						

• Metropolitan West's portfolio outperformed the Bloomberg Aggregate Index by 0.26% for the quarter and outperformed the Bloomberg Aggregate Index for the year by 0.65%.

Risk/Reward Statistics

The risk statistics used in this report examine performance characteristics of a manager or a portfolio relative to a benchmark (market indicator) which assumes to represent overall movements in the asset class being considered. The main unit of analysis is the excess return, which is the portfolio return minus the return on a risk free asset (3 month T-Bill).

Alpha measures a portfolio's return in excess of the market return adjusted for risk. It is a measure of the manager's contribution to performance with reference to security selection. A positive alpha indicates that a portfolio was positively rewarded for the residual risk which was taken for that level of market exposure.

Beta measures the sensitivity of rates of portfolio returns to movements in the market index. A portfolio's beta measures the expected change in return per 1% change in the return on the market. If a beta of a portfolio is 1.5, a 1 percent increase in the return on the market will result, on average, in a 1.5 percent increase in the return on the portfolio. The converse would also be true.

Downside Risk stems from the desire to differentiate between "good risk" (upside volatility) and "bad risk" (downside volatility). Whereas standard deviation punishes both upside and downside volatility, downside risk measures only the standard deviation of returns below the target. Returns above the target are assigned a deviation of zero. Both the frequency and magnitude of underperformance affect the amount of downside risk.

Excess Return Ratio is a measure of risk adjusted relative return. This ratio captures the amount of active management performance (value added relative to an index) per unit of active management risk (tracking error against the index.) It is calculated by dividing the manager's annualized cumulative excess return relative to the index by the standard deviation of the individual quarterly excess returns. The Excess Return Ratio can be interpreted as the manager's active risk/reward tradeoff for diverging from the index when the index is mandated to be the "riskless" market position.

Information Ratio measures the manager's market risk-adjusted excess return per unit of residual risk relative to a benchmark. It is computed by dividing alpha by the residual risk over a given time period. Assuming all other factors being equal, managers with lower residual risk achieve higher values in the information ratio. Managers with higher information ratios will add value relative to the benchmark more reliably and consistently.

R-Squared indicates the extent to which the variability of the portfolio returns are explained by market action. It can also be thought of as measuring the diversification relative to the appropriate benchmark. An r-squared value of .75 indicates that 75% of the fluctuation in a portfolio return is explained by market action. An r-squared of 1.0 indicates that a portfolio's returns are entirely related to the market and it is not influenced by other factors. An r-squared of zero indicates that no relationship exists between the portfolio's return and the market.

Relative Standard Deviation is a simple measure of a manager's risk (volatility) relative to a benchmark. It is calculated by dividing the manager's standard deviation of returns by the benchmark's standard deviation of returns. A relative standard deviation of 1.20, for example, means the manager has exhibited 20% more risk than the benchmark over that time period. A ratio of .80 would imply 20% less risk. This ratio is especially useful when analyzing the risk of investment grade fixed-income products where actual historical durations are not available. By using this relative risk measure over rolling time periods one can illustrate the "implied" historical duration patterns of the portfolio versus the benchmark.

Residual Portfolio Risk is the unsystematic risk of a fund, the portion of the total risk unique to the fund (manager) itself and not related to the overall market. This reflects the "bets" which the manager places in that particular asset market. These bets may reflect emphasis in particular sectors, maturities (for bonds), or other issue specific factors which the manager considers a good investment opportunity. Diversification of the portfolio will reduce or eliminate the residual risk of that portfolio.

Risk/Reward Statistics

Rising Declining Periods refer to the sub-asset class cycles vis-a-vis the broader asset class. This is determined by evaluating the cumulative relative sub-asset class index performance to that of the broader asset class index. For example, to determine the Growth Style cycle, the S&P 500 Growth Index (sub-asset class) performance is compared to that of the S&P 500 Index (broader asset class).

Sharpe Ratio is a commonly used measure of risk-adjusted return. It is calculated by subtracting the "risk-free" return (usually 3 Month Treasury Bill) from the portfolio return and dividing the resulting "excess return" by the portfolio's risk level (standard deviation). The result is a measure of return gained per unit of risk taken.

Sortino Ratio is a downside risk-adjusted measure of value-added. It measures excess return over a benchmark divided by downside risk. The natural appeal is that it identifies value-added per unit of truly bad risk. The danger of interpretation, however, lies in these two areas: (1) the statistical significance of the denominator, and (2) its reliance on the persistence of skewness in return distributions.

Standard Deviation is a statistical measure of portfolio risk. It reflects the average deviation of the observations from their sample mean. Standard deviation is used as an estimate of risk since it measures how wide the range of returns typically is. The wider the typical range of returns, the higher the standard deviation of returns, and the higher the portfolio risk. If returns are normally distributed (ie. has a bell shaped curve distribution) then approximately 2/3 of the returns would occur within plus or minus one standard deviation from the sample mean.

Total Portfolio Risk is a measure of the volatility of the quarterly excess returns of an asset. Total risk is composed of two measures of risk: market (non-diversifiable or systematic) risk and residual (diversifiable or unsystematic) risk. The purpose of portfolio diversification is to reduce the residual risk of the portfolio.

Tracking Error is a statistical measure of a portfolio's risk relative to an index. It reflects the standard deviation of a portfolio's individual quarterly or monthly returns from the index's returns. Typically, the lower the Tracking Error, the more "index-like" the portfolio.

Treynor Ratio represents the portfolio's average excess return over a specified period divided by the beta relative to its benchmark over that same period. This measure reflects the reward over the risk-free rate relative to the systematic risk assumed.

Note: Alpha, Total Risk, and Residual Risk are annualized.

New Research from Callan's Experts

Callan's 2019-2028 Capital Market Projections | Callan develops long-term capital market projections at the start of each year, detailing our expectations for return, volatility, and correlation for broad

asset classes. For 2019-2028, we made gradual, evolutionary changes to our expectations from our projections last year. We increased our fixed income assumptions to reflect higher starting yields compared to one year ago, including a higher return for cash, but we held constant our equity return premium over cash. As a result, we have narrowed the equity risk premium over bonds.

Two Questions to Help DC Plans Save on Litigation Costs | Executives can monitor whether in-house fiduciaries for their defined contribution plans are on track or need assistance by asking these questions: 1) Are plan administration costs too high? 2) Are participants getting the best "bang for their buck" from investment fees?

The Good, the Bad, and the Ugly: Which Will Your DC Plan Be in 2019? | In this paper, we outline best practices for defined contribution (DC) plan sponsors that aspire to be the Good gunslinger, and flag traps that could ensnare them in Bad or even Ugly territory.

2019 DC Trends Survey | Callan's 12th Annual DC Trends Survey highlights plan sponsors' key themes from 2018 and expectations for 2019.

2019 National Workshop Summary: DC Plans | This workshop by Callan's Ben Taylor, Jana Steele, and Gordon Weightman, "The New Face of DC Plans," provided what plan sponsors and investment managers need to know to stay current on new developments and how they might benefit plans. **2019** National Workshop Summary: Private Equity | In their workshop, "Private Equity: Primary Investment Opportunities and Considerations," Callan's Pete Keliuotis, Jay Nayak, and Weston Lewis demonstrated how a thoughtful approach to program design, strategy allocation, and capital commitment pacing can lead to long-term success in private equity investing.

2019 National Workshop Summary: Strategic Allocations | In this workshop, Callan's Ann O'Bradovich, Ho Hwang, and Gary Chang discussed the trend over the past several decades in which U.S. institutional investors have shifted their public equity portfolios to increase allocations to non-U.S. stocks.

The Callan Periodic Table Collection: Year-End 2018 | The Periodic Table Collection offers versions focused on equity, fixed income, fund sponsors, and alternatives. Other tables compare the performance of key indices to zero and to inflation.

Quarterly Periodicals

Private Equity Trends | A newsletter on private equity activity, covering both the fundraising cycle and performance over time.

<u>Market Pulse Flipbook</u> | A market reference guide covering trends in the U.S. economy, developments for fund sponsors, and the latest data for U.S. and non-U.S. equities and fixed income, alternatives, and defined contribution plans.

Active vs. Passive Charts | This series of charts compares active managers alongside relevant benchmarks over the long term.

<u>Capital Market Review</u> | Provides analysis and a broad overview of the economy and public and private market activity each quarter across a wide range of asset classes.

The Center for Investment Training Educational Sessions

The Center for Investment Training, better known as the "Callan College," provides a foundation of knowledge for industry professionals who are involved in the investment decision-making process. It was founded in 1994 to provide clients and non-clients alike with basic- to intermediate-level instruction. Our next sessions are:

Introduction to Investments

San Francisco, July 16-17, 2019 Chicago, October 22-23, 2019

This program familiarizes fund sponsor trustees, staff, and asset management advisers with basic investment theory, terminology, and practices. It lasts one-and-a-half days and is designed for individuals who have less than two years of experience with assetmanagement oversight and/or support responsibilities. Tuition for the Introductory "Callan College" session is \$2,350 per person. Tuition includes instruction, all materials, breakfast and lunch on each day, and dinner on the first evening with the instructors.

"Callan College" on Alternative Investing Chicago, October 2019—Date TBD

Disclosures

List of Callan's Investment Manager Clients

Confidential - For Callan Client Use Only

Callan takes its fiduciary and disclosure responsibilities to clients very seriously. We recognize that there are numerous potential conflicts of interest encountered in the investment consulting industry and that it is our responsibility to manage those conflicts effectively and in the best interest of our clients. At Callan, we employ a robust process to identify, manage, monitor and disclose potential conflicts on an on-going basis.

The list below is an important component of our conflicts management and disclosure process. It identifies those investment managers that pay Callan fees for educational, consulting, software, database or reporting products and services. We update the list quarterly because we believe that our fund sponsor clients should know the investment managers that do business with Callan, particularly those investment manager clients that the fund sponsor clients may be using or considering using. Please note that if an investment manager receives a product or service on a complimentary basis (e.g. attending and educational event), they are not included in the list below. Callan is committed to ensuring that we do not consider an investment manager's business relationship with Callan, or lack thereof, in performing evaluations for or making suggestions or recommendations to its other clients. Please refer to Callan's ADV Part 2A for a more detailed description of the services and products that Callan makes available to investment manager clients through our Institutional Consulting Group, Independent Adviser Group and Fund Sponsor Consulting Group. Due to the complex corporate and organizational ownership structures of many investment management firms, parent and affiliate firm relationships are not indicated on our list.

Fund sponsor clients may request a copy of the most currently available list at any time. Fund sponsor clients may also request specific information regarding the fees paid to Callan by particular fund manager clients. Per company policy, information requests regarding fees are handled exclusively by Callan's Compliance Department.

RECOMMENDED ACTION

Motion: Receive and File the Asset/Liability Study for the ATU, IBEW and Salaried Employees Retirement Plans (ALL).

FISCAL IMPACT

None.

DISCUSSION

In 2014, Callan LLC ("Callan") performed an Asset/Liability Study for the ATU/IBEW and Salaried Employees Retirement Plans to provide an in-depth look at the then-current investment strategy used by the Pension Plans, as well as the liability associated with the Plans and their investments. (Since that time, the ATU and IBEW plan assets have been split into two separate funds.) In general, Asset/Liability Studies focus on the investment goals of the subject plan, such as to provide a reasonable return without over-exposure to risk, and on the overall allocation of investments in various asset classes, as opposed to individual investment managers or their relative performance.

Updated Asset/Liability Studies typically are required once every three to five years, unless there is a significant change in market conditions or a significant change to the asset allocation mix requiring more frequent in-depth analysis of this type. The Retirement Boards entered into a new five-year agreement for investment performance advisory and evaluation services with Callan in 2018, the scope of services for which includes performance of Asset/Liability studies as requested. Given that it has been five years since the last Asset/Liability study was completed, staff instructed Callan to complete an updated study.

At the June 20, 2018 Quarterly Retirement Board meeting, Callan presented the annual Asset Allocation Review, required under the Retirement Plans' Investment Policy. As part of that presentation, Callan discussed the potential for further diversification by investing in asset classes that are not currently part of the Retirement Plans' portfolio, including hedge funds, private equity, and real estate. To prepare for the Asset/Liability Study presentation and discussion this year, the Retirement Boards requested additional information about those asset classes in the form of educational presentations by Callan. Accordingly, Callan presented

Agenda Item No.	Board Meeting Date	Open/Closed Session	Information/Action Item	Issue Date
15	06/12/19	Retirement	Action	04/16/19

Subjec	Receive and File the Asset/Liability Study for the ATU, IBEW and Salaried	
	Employees Retirement Plans (ALL). (Adelman)	

information and answered questions regarding (1) hedge funds and multi-asset class investments at the September 12, 2018 Quarterly Retirement Board Meeting, (2) private equity investments at the December 12, 2018 Quarterly Retirement Board Meeting, and (3) Real Estate Investments at the March 20, 2019 Quarterly Retirement Board Meeting.

Following those presentations, Callan was asked to include these diversification options in the new Asset/Liability study.

The Asset/Liability Study presents the risk and potential return for multiple asset class mixes, both under the current asset allocation target policy and taking into account new investments in real estate, private equity and/or hedge funds, and provides an excellent opportunity for the Boards to consider potential changes to the asset allocation.

Staff recommends that the Boards receive and file Asset/Liability Study completed by Callan (Attachment #1) and provide direction to Staff and Callan regarding the asset allocation target policy as described therein.

Asset Liability Study

Gary Chang, CFA Capital Markets Research

Jay Kloepfer Capital Markets Research Anne Heaphy Fund Sponsor Consulting

Uvan Tseng, CFA Fund Sponsor Consulting

Goal of the Study

The goal of this asset-liability study is to establish a long-term strategic asset allocation target for Sacramento Regional Transit District pension fund (the "Plan").

An appropriate asset allocation will depend on the Plan's investment objectives.

- Minimize costs over the long run (long-term goal)
- How much return generation (from beta and alpha) is necessary to lower costs and/or improve funded status?
- Minimize funded status volatility (short-term goal)
- How much risk reduction is necessary to reduce funded status volatility?

Investment solution is an optimal balance between sustainable funded status volatility and minimization of costs over the long run.

Asset allocation will vary by the unique circumstances of the Plan.

No "one-size-fits-all" solution exists

Executive Summary

Sacramento Regional Transit District ("SacRT") needs a tilt toward growth assets to serve the goal of funding the plan and the current policy target contains such a tilt.

The current target is diversified across stocks and bonds and it would be reasonable to retain it as the policy target going forward.

- Liquidity needs are manageable and low
- Liability growth is moderate over the next 10 years
- After taking into account different inflation expectations, Callan models the liability growth rate as 6.90%, which is slightly less than the 7.25% actuarial discount rate.

SacRT can also consider further diversification, and Callan believes real estate in particular offers a potentially attractive source of return that would complement and diversify the existing portfolio.

• Of course, there are cost and implementation considerations to take into account

The liability and demographic profiles suggest SacRT has a sufficiently long time horizon in which to assume investment risk.

Agenda

Model portfolio with 2019-2028 capital market projections

- Monte Carlo simulations

Explore risk tolerance

• Willingness and ability to take risk

Propose candidate asset allocation mixes

Illustrate a range of potential outcomes

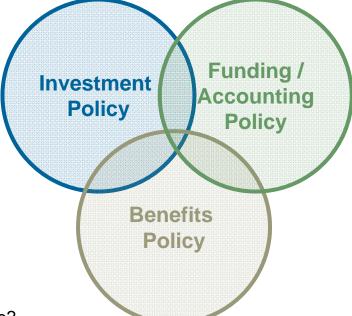

Objective Select an appropriate asset allocation

Where Does Asset Allocation Fit In?

We evaluate the interaction of the three key policies that govern a pension plan with the goal of establishing the best investment policy

Investment Policy

- How will the assets supporting the benefits be invested?
- What risk and return objectives?
- How to manage cash flows?

Funding / Accounting Policy

- How will the benefits be paid for (funded)?
- What actuarial discount rate?
- How will deficits be paid for?
- How will costs be recognized?

Benefits Policy

- What type/kind of benefits?
- What level of benefit?
- When and to whom are they payable?

Today's Focus is on Examining the Investment Policy

Overview of Investment Goals

The investment policy, or asset allocation, is one of the three key components of a benefit plan (along with contribution and benefit policy).

Asset allocation is the process of determining the optimal allocation of a portfolio among broad asset classes based on several factors:

- Capital market expectations
- Cash flow considerations
- Recent experience
- Investment goals and objectives
- Risk tolerance
- Time horizon

A well engineered asset allocation considers:

- All appropriate asset classes for inclusion
- Liquidity needs, asset class limitations, implementation challenges, administrative and legal burdens, size or capacity constraints
- Rebalancing discipline

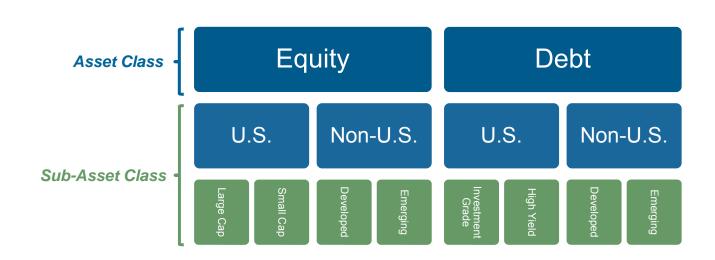

The Focus is on Broad Asset Classes

Breakdowns between investment styles within asset classes (growth vs. value, large cap vs. small cap) are best addressed in a manager structure analysis.

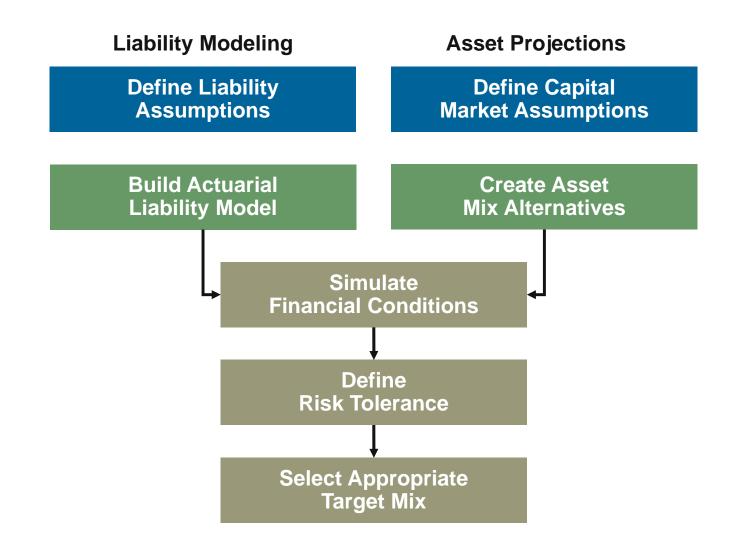

Primary asset classes and important sub-asset classes include:

- U.S. Stocks
- U.S. Bonds
- Non-U.S. Stocks
- Non-U.S. Bonds
- Real Estate
- Alternative Investments
- Private equity
- -Absolute return

Overview of the Asset-Liability Process

Asset Projections

Callan Capital Market Process and Philosophy

Underlying beliefs guide the development of the projections:

- An initial bias toward long-run averages
- A conservative bias
- An awareness of risk premiums
- A presumption that markets ultimately clear and are rational

Reflect our belief that long-term equilibrium relationships between the capital markets and lasting trends in global economic growth are key drivers to setting capital market expectations.

Long-term compensated risk premiums represent "beta"—exposure to each broad market, whether traditional or "exotic," with limited dependence on successful realization of alpha.

The projection process is built around several key building blocks:

- Advanced modeling at the individual asset class level (e.g., a detailed bond model, an equity model)
- A path for interest rates and inflation
- A cohesive economic outlook
- A framework that encompasses Callan beliefs about the long-term operation and efficiencies of the capital markets.

2019 - 2028 Return and Risk Assumptions

Asset Class	Index	Expected Return*	Standard Deviation
Equities			
Broad Domestic Equity	Russell 3000	7.15%	17.95%
Large Cap	S&P 500	7.00%	17.10%
Small/Mid Cap	Russell 2500	7.25%	22.65%
Global ex-US Equity	MSCI ACWI ex USA	7.25%	21.10%
International Equity	MSCI World ex USA	7.00%	19.75%
Emerging Markets Equity	MSCI Emerging Markets	7.25%	27.45%
Fixed Income			
Short Duration	Bloomberg Barclays 1-3 Yr G/C	3.40%	2.10%
Domestic Fixed	Bloomberg Barclays Aggregate	3.75%	3.75%
Long Duration	Bloomberg Barclays Long G/C	3.75%	10.65%
TIPS	Bloomberg Barclays TIPS	3.75%	5.05%
High Yield	Bloomberg Barclays High Yield	5.35%	10.35%
Non-US Fixed	Bloomberg Barclays Glbl Agg xUSD	1.40%	9.20%
Emerging Market Debt	EMBI Global Diversified	5.05%	9.50%
Other			
Real Estate	NCREIF ODCE	6.25%	15.70%
Private Equity	Cambridge Private Equity	8.50%	29.30%
Hedge Funds	Callan Hedge FoF Database	5.50%	8.85%
Commodities	Bloomberg Commodity	3.20%	18.00%
Cash Equivalents	90-Day T-Bill	2.50%	0.90%
Inflation	CPI-U	2.25%	1.50%

* 10 year annualized return

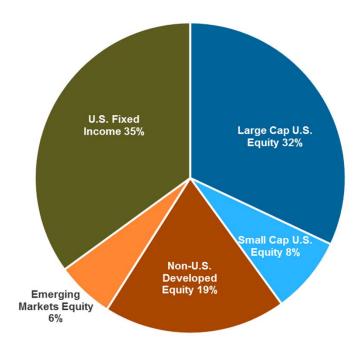

Capital market expectations represent passive exposure (beta only) with the exception of Real Estate, Private Equity, and Hedge Funds.

All return expectations are net of fees.

Asset classes to be modeled in the 2019 asset-liability study are highlighted in green.

Policy Target Allocation

	Policy
Asset Class	Target
Global Equity	65%
Large Cap U.S. Equity	32%
Small Cap U.S. Equity	8%
LC Non-U.S. Developed Equity	14%
SC Non-U.S. Developed Equity	5%
Emerging Markets Equity	6%
Fixed Income	35%
U.S. Fixed Income	35%
Expected Return Expected Standard Deviation	6.48% 11.89%

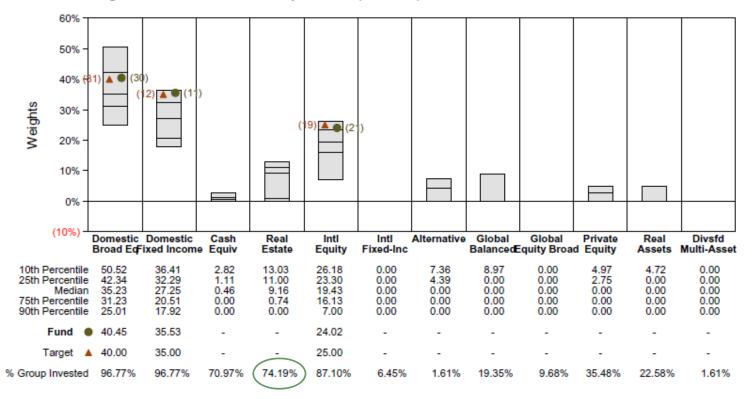

SacRT employs an actuarial discount rate of 7.25% which is based on a 3.0% inflation expectation while Callan uses a 2.25% inflation expectation.

Callan expects lower inflation to flow through the liabilities and result in a lower liability growth rate of 6.90% (vs. the actuarial discount rate of 7.25%).

Expected returns assume passive implementation; however, roughly 80% of SacRT's assets are actively managed.

Callan Knowledge. Experience. Integrity.

Peer Group Comparisons

Asset Class Weights vs Callan Public Fund Spons- Mid (100M-1B)

Relative to a peer group of other public funds, the target policy is relatively conservative with a high allocation to fixed income.

• Peer groups do not take into account differences in risk tolerances

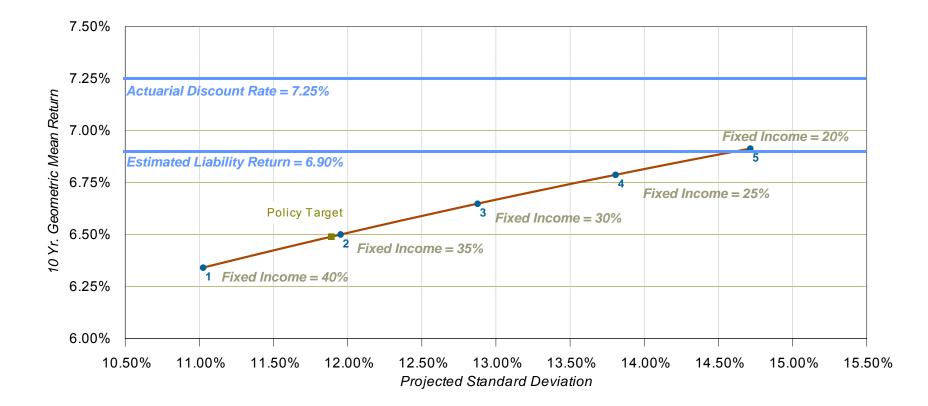

Alternative Asset Mixes

	Policy					
Asset Class	Target	Mix 1	Mix 2	Mix 3	Mix 4	Mix 5
Global Equity	65%	60%	65%	70%	75%	80%
Large Cap U.S. Equity	32%	29%	31%	33%	36%	38%
Small Cap U.S. Equity	8%	8%	8%	9%	10%	10%
LC Non-U.S. Developed Equity	14%	13%	14%	15%	16%	17%
SC Non-U.S. Developed Equity	5%	5%	5%	5%	6%	6%
Emerging Markets Equity	6%	6%	7%	7%	8%	9%
Fixed Income	35%	40%	35%	30%	25%	20%
U.S. Fixed Income	35%	40%	35%	30%	25%	20%
Expected Return Expected Standard Deviation	6.48% 11.89%	6.34% 11.06%	6.50% 11.99%	6.65% 12.92%	6.79% 13.86%	6.91% 14.77%

The optimal mixes are constructed with decreasing allocations to fixed income (from 40% to 20%); Mix 1 is the most conservative while Mix 5 is the most aggressive.

As the fixed income allocation decreases the expected portfolio return increases, but so does the expected risk.

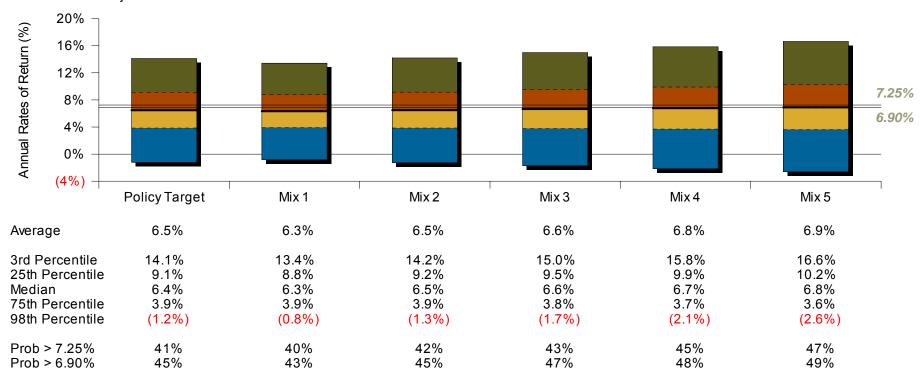

The Efficient Frontier

The efficient frontier represents mixes which optimally trade off between expected return and expected risk; the numbered dots represent optimal mixes 1 - 5, detailed on the previous slide.

Mix 5 delivers a return close to the expected liability return.

Probability of Achieving a 7.25% or 6.90% Return

Range of Projected Rates of Return Projection Period: 10 Years

The above chart illustrates the probability of achieving 7.25% and 6.90% return over the next 10 years.

New Asset Classes Considered

The following asset classes were also considered for inclusion in the portfolio

- Private Real Estate
- Hedge Funds/Multi-Asset Class strategies (MAC's)
- Private Equity

Two additional sets of optimal mixes were examined:

- Current Asset Classes with the addition of private real estate
- Current Asset Classes with the addition of private real estate, private equity, and hedge funds/MAC's

Asset Mixes with Real Estate

	Policy		Re	al Estate Mix	kes	
Asset Class	Target	Mix 1R	Mix 2R	Mix 3R	Mix 4R	Mix 5R
Global Equity	65%	53%	58%	63%	68%	73%
Large Cap U.S. Equity	32%	25%	28%	30%	32%	34%
Small Cap U.S. Equity	8%	6%	7%	8%	9%	9%
LC Non-U.S. Developed Equity	14%	12%	13%	14%	15%	16%
SC Non-U.S. Developed Equity	5%	4%	4%	5%	5%	6%
Emerging Markets Equity	6%	6%	6%	6%	7%	8%
Fixed Income	35%	37%	32%	27%	22%	17%
U.S. Fixed Income	35%	37%	32%	27%	22%	17%
Alternative Assets	0%	10%	10%	10%	10%	10%
Real Estate	0%	10%	10%	10%	10%	10%
Expected Geometric Return Expected Standard Deviation	6.48% 11.89%	6.34% 10.95%	6.50% 11.87%	6.65% 12.78%	6.79% 13.71%	6.91% 14.61%

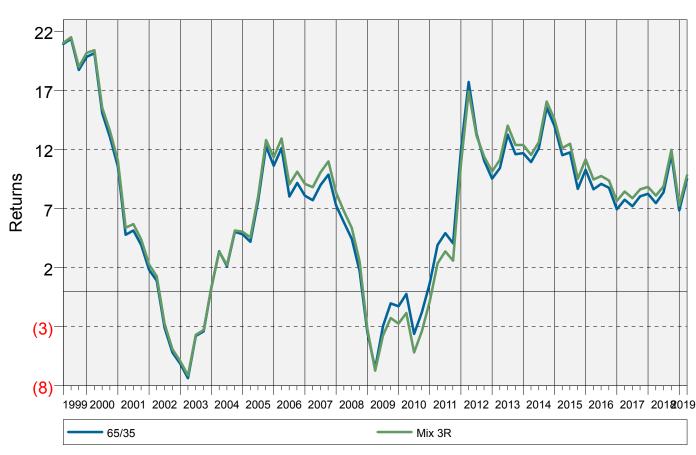

The real estate mixes are constructed keeping the returns the same from the simulated mixes.

Real Estate constrained to 10% maximum.

At each level of return, volatility decreases between 10-20 bps relative to the simulated mixes.

Hypothetical Performance With Real Estate

Rolling 12 Quarter Returns for 20 Years Ended March 31, 2019

- Real estate provides diversification and a smoothing effect that is not easy to capture in the numbers.
- Mix 3R raises the expected return assumption to 6.65% from 6.48%.
- This graph provides a comparison of a 65/35 portfolio (the current target) vs Mix 3R (which is a 63/27/10 mix) over the last 20 years.
- The Mix 3R trails the 65/35 portfolio when the market experiences strong rebound rallies, such as from 2009 – 2011 but generally outperforms otherwise.
- The annualized returns of the 65/35 portfolio are 5.86% over the last 20 years, versus 6.09% for Mix 3R.

[•] Batting average for Mix 3R is 81%.

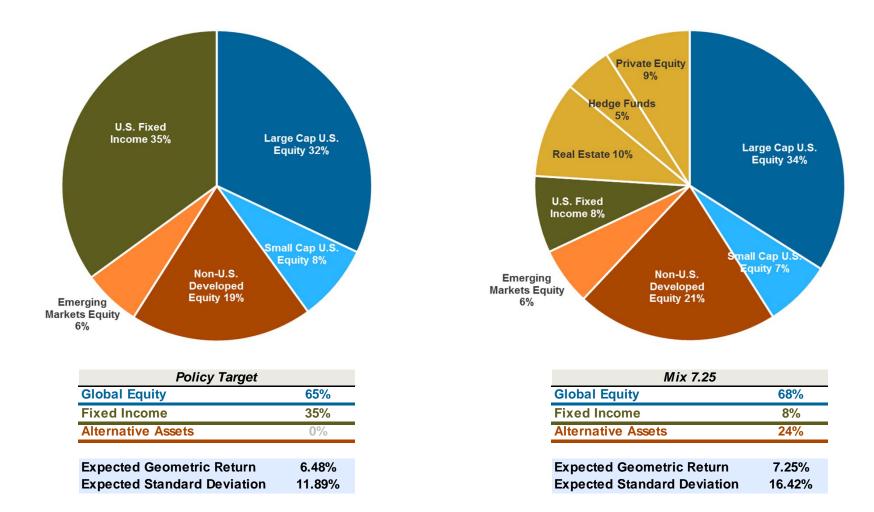

Asset Mixes with Real Estate, Private Equity, and Hedge Funds

	Policy		Alt	ernatives Mi	xes	
Asset Class	Target	Mix 1A	Mix 2A	Mix 3A	Mix 4A	Mix 5A
Global Equity	65%	42%	45%	49%	54%	58%
Large Cap U.S. Equity	32%	21%	22%	25%	26%	29%
Small Cap U.S. Equity	8%	4%	5%	5%	6%	6%
LC Non-U.S. Developed Equity	14%	10%	10%	11%	13%	13%
SC Non-U.S. Developed Equity	5%	3%	4%	4%	4%	5%
Emerging Markets Equity	6%	4%	4%	4%	5%	5%
Fixed Income	35%	40%	35%	30%	25%	20%
U.S. Fixed Income	35%	40%	35%	30%	25%	20%
Alternative Assets	0%	18%	20%	21%	21%	22%
Real Estate	0%	8%	9%	10%	10%	10%
Hedge Funds/Multi-Asset Class	0%	5%	5%	5%	4%	5%
Private Equity	0%	5%	6%	6%	7%	7%
Expected Geometric Return Expected Standard Deviation	6.48% 11.89%	6.30% 10.34%	6.46% 11.19%	6.63% 12.15%	6.79% 13.12%	6.95% 14.17%

These mixes were constructed keeping the same increments of fixed income as mixes 1-5. Private Equity constrained to 12.5% of total public equity. Real Estate constrained to 10%.

Similar returns to the simulated mixes at a lower volatility.

How to Achieve a 7.25% Expected Return

In order to achieve a 7.25% expected return, significantly more complexity and risk would be required.

Liability Modeling

Build Actuarial Liability Model

For purposes of asset-liability modeling, Callan built an actuarial liability model based on the Plan's specific liabilities which match Cheiron's actuarial accrued liability within +/-3%.

• Results are then scaled to match the actuarial report exactly.

Liability model is based on the 7/1/2018 actuarial valuation report.

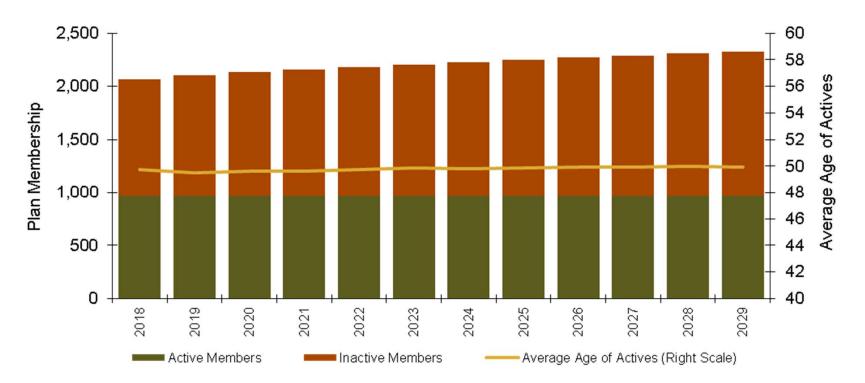

Other assumptions:

- Open to new entrants
- 0% workforce growth
- UAL amortized by 2032 (14 years)

July 1, 2018 Actuarial Valuation	All Plans
Actuarial Accrued Liability	\$398.9 mm
Market Value of Assets	\$283.5 mm
Actuarial Value of Assets	\$288.0 mm
Market Funded Status (MVA/AL)	71%
Actuarial Funded Status (AVA/AL)	72%
Employer Contribution (\$)	\$20.8mm
Employer Contribution (%)	29.7%

Key Assumptions	Actuarial Assumption	Callan 10-year Expectation
Investment Return	7.25%	6.50%
Price Inflation	3.0%	2.25%

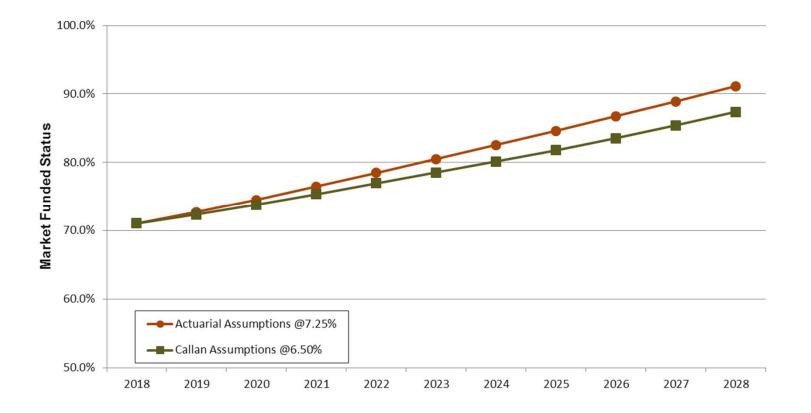

Demographic Projection

Plan membership is gradually increasing.

- Total population increases from 2,000 to 2,300
- Active population is assumed to hold while inactive population is growing over time
- Average age of active members remains around 50

Expected Funded Status Projections

A return gap (6.5% vs 7.25%) results in a lower funded status at the end of 10 years.

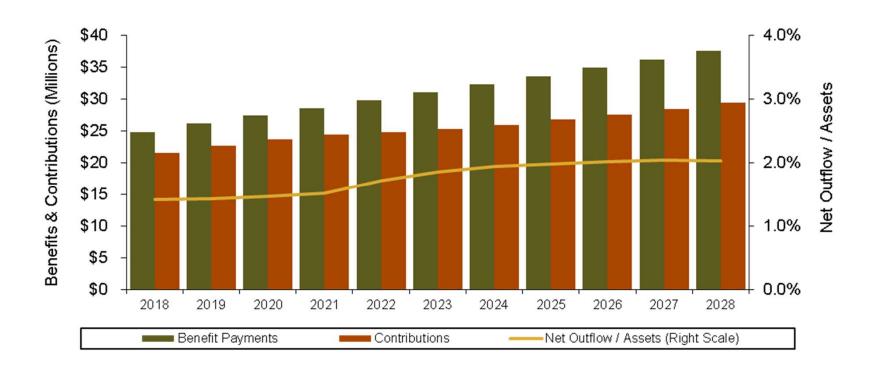

• The return gap is offset to some extent by projecting liabilities at lower price inflation

This study will introduce annual return volatility.

Funded status is projected to reach 87% at the end of 10 years.

Liquidity Needs

Net Outflow (% of Market Assets)

Net Outflow = Benefit Payments – Funding Contributions (Employer + Employee), taken as a percentage of the market value of assets at the beginning of the year.

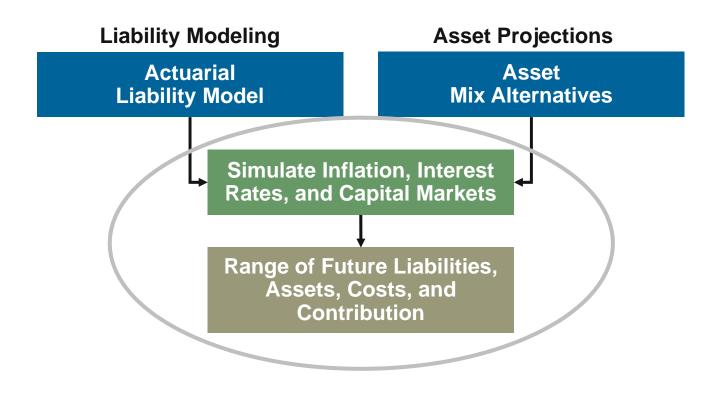

Liquidity needs help define the appropriate time horizon for plan investments and shape the ability of the Plan to commit to illiquid asset classes – liquidity needs are projected to be manageable.

Under the current funding policy, liquidity needs are low.

Stochastic Forecast

Introduction to the Stochastic Forecast

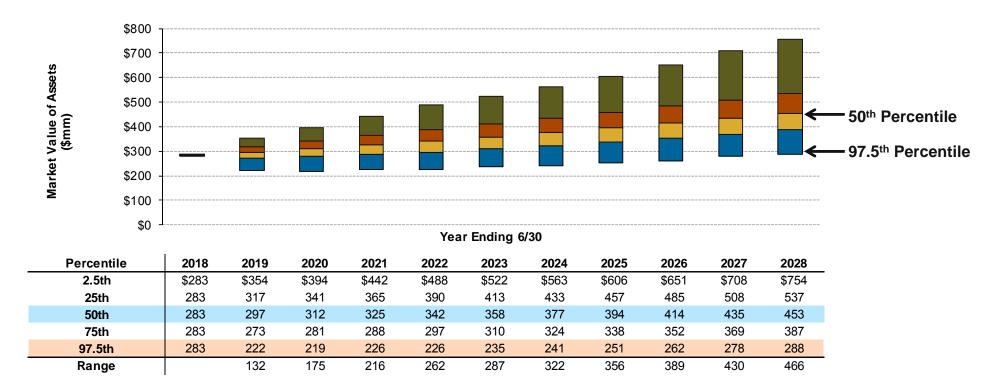

This section demonstrates a stochastic forecast: the modeling of uncertainty associated with the capital markets by generating 2,000 simulations per year, per asset mix, to capture possible future economic scenarios and their effect on the portfolio.

Simulate three key variables: 1) inflation rate, 2) interest rate, and 3) asset class returns

Focus is on a 10-year planning horizon (2019 - 2028)

Market Value of Assets (MVA)

Current Policy

The expected outcome is the 50th percentile.

• There is a 50% chance that asset values will be above the value shown and a 50% chance that asset values will be below the value shown.

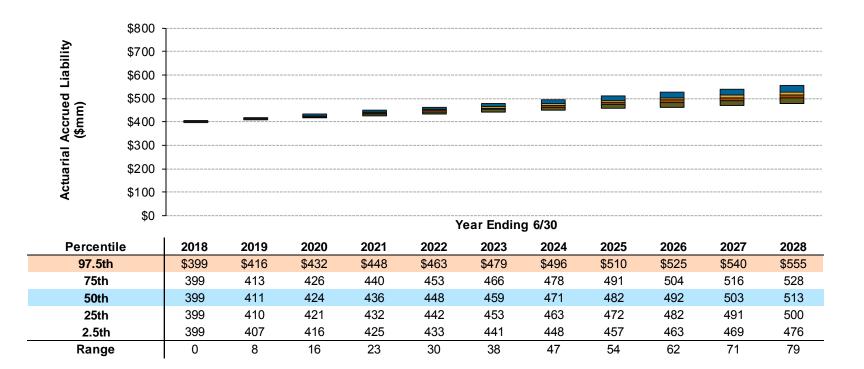

The worse-case scenario is the 97.5th percentile; a 1 in 40 chance of occurrence.

For example, there is a 1-in-40 chance (2.5% probability) that the 6/30/2028 market value of assets will be \$288M or less.

Callan Knowledge. Experience. Integrity.

Range of Actuarial Liability

Current Policy

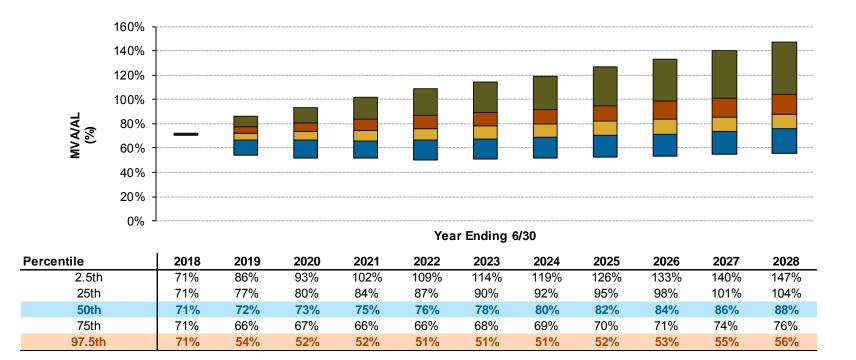

Actuarial liabilities have much less capital market risk since they are not marked-to-market using current interest rates.

- Projection assumes constant actuarial discount rate of 7.25%
- Current variability reflects the uncertainty of inflation as it impacts participants' wages

Range of Funded Ratio (MVA / AL)

Current Policy

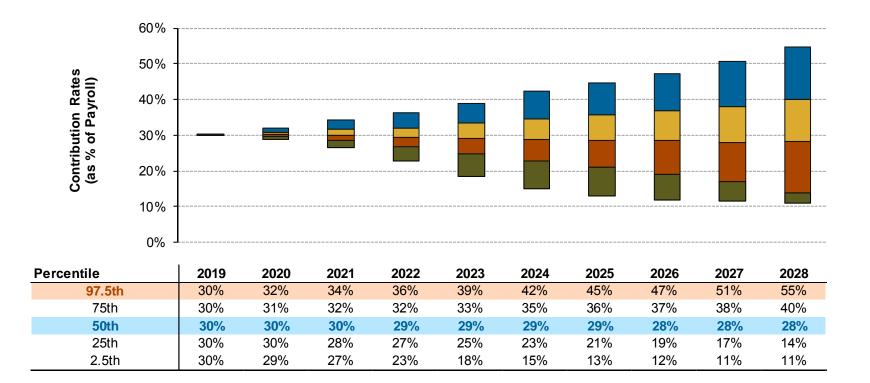

Funded Status = Market Value of Assets (MVA) / Actuarial Liability

Asset and liability experience is combined in determining funded status volatility.

Funded ratio volatility is largely driven by asset volatility which highlights the importance of the asset mix decision.

Range of Contribution Rates

Current Policy

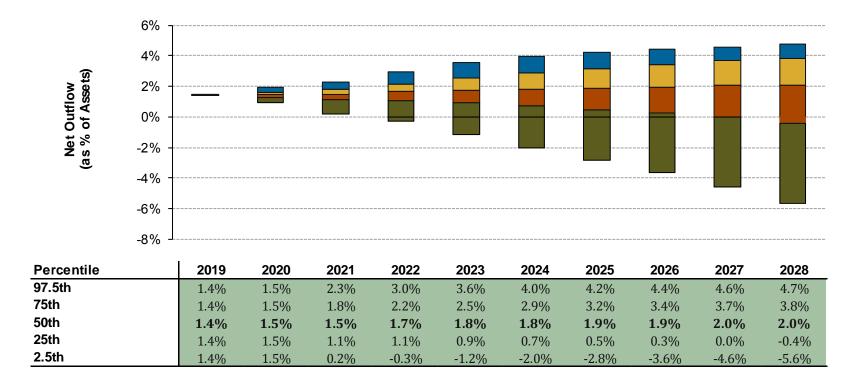

Contribution volatility is another measure of investment risk, with the potential for worse case contribution rates to increase over time.

This chart demonstrates the impact of not earning the actuarial rate of return.

Range of Simulated Net Cash Flows (% Market Assets)

Current Policy

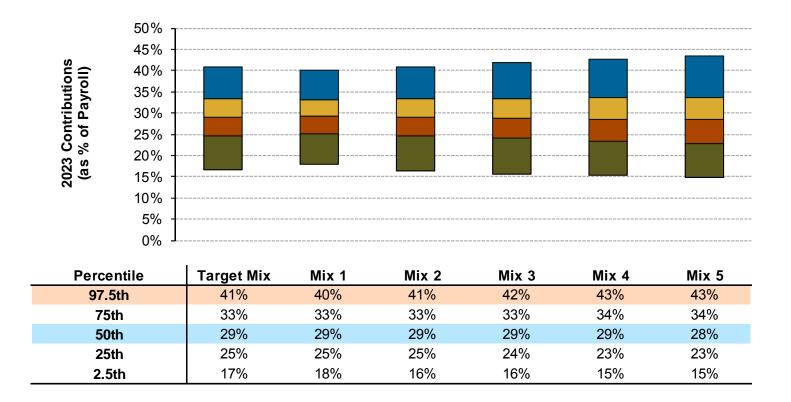

Volatility of liquidity needs are forecasted to be manageable, even in worse-case scenarios.

Current Target has no illiquid investments.

Net outflow above 7% may constrain illiquid investments below 20-40%, depending on funding policy, funded status and portfolio risk (potential for large drawdown).

Range of Contribution Rates – 5th Year

All Mixes including Current Policy

Investment volatility is reflected in employer contribution rates through the amortization payment.

Chart compares the contribution rates in the fifth year across the range of alternative asset mixes

Differences across mixes are small

Range of Simulated Funded Ratio (MVA / AL) – End of 10 Years

All Mixes including Current Policy

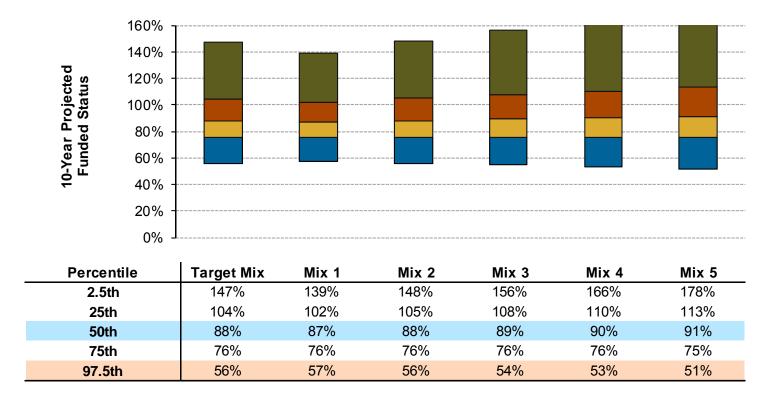

Chart compares funded ratio volatility across a range of alternative asset mixes; no change in the 7.25% discount rate is modeled.

A more aggressive asset mix is expected (50th percentile) to result in a higher funded status but in a worse case scenario (97.5th percentile) the funded status would be lower.

Differences between mixes are relatively small.

Range of Ultimate Net Cost – End of 10 Years

Ultimate Net Cost is a decision variable that combines funded status and contribution risk

- Ultimate Net Cost = Cumulative Contributions
 + Unfunded Liability (MV) in year 10
- 97.5th percentile is used to describe Worse Case
- UNC can be plotted similar to an "efficient frontier"

The risk/reward trade-off for each alternative compared to the current target is broadly similar, resulting in a linear relationship.

Observations and Recommendations

Summary of Results and Observations

The liability and demographic profiles suggest SacRT has a sufficiently long time horizon in which to assume investment risk.

Liquidity needs are manageable and low

- Net outflows are less than 5% over much of the next 10 years
- No illiquid asset classes in the current target

Liabilities are expected to grow at a moderate pace

• Plan is open and accruing benefits

After taking into account different inflation expectations, Callan models the liability return as 6.90%, which is slightly less than the 7.25% actuarial discount rate.

- A return objective of 6.90% is consistent with Callan's capital market assumptions with embedded price inflation of 2.25%
- Higher inflation than expected (2.25%) should result in higher nominal returns and higher liabilities over the long run

The risk/return stance of the current target appears to be sufficient to meet the very long-term goals and funding needs for the plan.

Alternative mixes explore modest changes to the current target and illustrate the impact of increasing risk in pursuit of return.

Conclusion

The current target is diversified across stocks and bonds, and it would be reasonable to retain it as the policy target going forward.

SacRT can also consider further diversification, and Callan believes real estate in particular offers a potentially attractive source of return that would complement and diversify the existing portfolio.

• Of course, there are cost and implementation considerations to take into account

Mix 3R (which includes 10% to real estate, funded from both stocks and bonds) is compelling for several reasons:

- Diversifier to equities and fixed income
- Lagged valuation process helps smooth out volatility
- Intermediate to long term inflation hedge
- Potential to add active management premium
- Many similarly sized public funds (~75%) have an allocation to real estate

Mix 3R increases the expected return to 6.65%, from the current target expected return of 6.48%. Including an active management premium assumption of 20-30 bps gets the Plan closer to the 6.90% liability growth rate (though still short of the 7.25% discount rate).

Item No.	Date	Session	Item	Date
16	06/12/19	Retirement	Action	04/29/19

Subject: Approving Disability Retirement Application for Charity Nation-Whaley (ATU). (Weekly)

<u>ISSUE</u>

Whether to Approve an Application for Disability Retirement submitted by Charity Nation-Whaley.

RECOMMENDED ACTION

Adopt Resolution No. 19-06-____, Approving Disability Retirement of Charity Nation-Whaley.

FISCAL IMPACT

Retirement benefits are funded under the Retirement Plan for Regional Transit Employees who are Members of ATU Local 256, hereinafter referred to as the "Retirement Plan".

DISCUSSION

Eligibility

Charity Nation-Whaley, hereinafter referred to as "Applicant," is a member of the Retirement Plan, pursuant to Article 3 of the Retirement Plan.

Vesting

The Applicant was in the continuous employ of the District as a part-time employee since October 14, 2002 and since September 1, 2003 as a full-time employee. Applicant has completed at least 10 Years of Service and achieved 100% vesting pursuant to Article 5 of the Retirement Plan.

<u>Service</u>

The Applicant was an Eligible Employee within the meaning of Article 2 of the Retirement Plan when the illness or injury at issue occurred, and has terminated service as an Employee of the District.

Age

There is no minimum age requirement for eligibility for disability retirement benefits.

Approved:

Presented:

Final 06/04/19 Director, Finance and Treasury

Pension and Retiree Services Administrator J:\Retirement Board'2019\IP's\Quarterly Meetings\June 12, 2019\HR Working IPs\Charity Nation-Whaley Disability IP (VW Draft).doc

Agenda Item No.	Board Meeting Date	Open/Closed Session	Information/Action Item	lssue Date
16	06/12/19	Open	Action	04/29/19

Subject:	Approving Disability Retirement Application for Charity Nation-Whaley (ATU).
	(Weekly)

Disability

Michael Cohen, M.D. evaluated the Applicant on May 16, 2019. Retirement Plan staff received Dr. Cohen's medical report on May 24, 2019. According to the medical report, Dr. Cohen has determined that the Applicant has a permanent physical or mental condition, resulting from illness or injury, that disqualifies her from performing the duties of her position as a Customer Service Representative.

Allowance

Upon approval by the Board, Retirement Plan Staff will notify Cheiron, Actuary for the Retirement Plan, to calculate retirement benefits to which the Applicant is entitled.

RESOLUTION NO. 19-06-____

Adopted by the Board of Directors for the Retirement Plan for Sacramento Regional Transit District Employees Who Are Members of the ATU Local Union 256 on this date:

<u>June 12, 2019</u>

APPROVE DISABILITY RETIREMENT APPLICATION FOR CHARITY NATION-WHALEY

BE IT HEREBY RESOLVED BY THE RETIREMENT BOARD OF DIRECTORS FOR THE RETIREMENT PLAN FOR SACRAMENTO REGIONAL TRANSIT DISTRICT EMPLOYEES WHO ARE MEMBERS OF THE ATU LOCAL UNION 256 AS FOLLOWS:

THAT, THE Board of Directors of the Retirement Plan for Regional Transit Employees who are Members of the ATU Local Union 256 (Retirement Board) hereby approves the disability retirement application for Charity Nation-Whaley.

Item No.	Date	Session	Item	Date
17	06/12/19	Retirement	Action	04/29/19

Subject: Approving Disability Retirement Application for MaryAnn Butcher (ATU). (Weekly)

<u>ISSUE</u>

Whether to Approve an Application for Disability Retirement submitted by MaryAnn Butcher.

RECOMMENDED ACTION

Adopt Resolution No. 19-06-____, Approving Disability Retirement of MaryAnn Butcher.

FISCAL IMPACT

Retirement benefits are funded under the Retirement Plan for Regional Transit Employees who are Members of ATU Local 256, hereinafter referred to as the "Retirement Plan".

DISCUSSION

<u>Eligibility</u>

MaryAnn Butcher, hereinafter referred to as "Applicant," is a member of the Retirement Plan, pursuant to Article 3 of the Retirement Plan.

Vesting

The Applicant was in the continuous employ of the District as a full-time employee since June 17, 2002. Applicant has completed at least 10 Years of Service and achieved 100% vesting pursuant to Article 5 of the Retirement Plan.

<u>Service</u>

The Applicant was an Eligible Employee within the meaning of Article 2 of the Retirement Plan when the illness or injury at issue occurred, and has terminated service as an Employee of the District.

<u>Age</u>

There is no minimum age requirement for eligibility for disability retirement benefits.

Disability

Michael Cohen, M.D. evaluated the Applicant on May 30, 2019. Retirement Plan staff received Dr. Cohen's medical report on May 31, 2019. According to the medical report, Dr. Cohen has
