

Sacramento Regional Transit District Agenda

SPECIAL RETIREMENT BOARD MEETING
9:00 A.M. WEDNESDAY, FEBRUARY 1, 2017
REGIONAL TRANSIT AUDITORIUM
1400 29th ST., SACRAMENTO, CALIFORNIA
Website Address: www.sacrt.com
(29th St. Light Rail Station/Bus 38, 67, 68)

MEETING NOTE: *This is a joint and concurrent meeting of the five independent Retirement Boards for the pension plans for the employees and retirees of the Sacramento Regional Transit District. This single, combined agenda designates which items will be subject to action by which board(s). Members of each board may be present for the other boards' discussions and actions, except during individual closed sessions.*

ROLL CALL

- ATU Retirement Board: Directors: Li, Morin, Niz, De La Torre
Alternates: Jennings, Muniz
- IBEW Retirement Board: Directors: Li, Morin, Ohlson, Burdick
Alternates: Jennings, Gallow
- AEA Retirement Board: Directors: Li, Morin, Devorak, Robison
Alternates: Jennings, McGoldrick
- AFSCME Retirement Board: Directors: Li, Morin, Mallonee, Hoslett
Alternates: Jennings, Kent
- MCEG Retirement Board: Directors: Li, Morin, Lonergan, Thorn
Alternates: Jennings, Sanchez-Ochoa

PUBLIC ADDRESSES BOARD ON MATTERS ON CONSENT AND MATTERS NOT ON THE AGENDA

At this time the public may address the Retirement Board(s) on subject matters pertaining to Retirement Board business listed on the Consent Calendar, any Closed Sessions or items not listed on the agenda. Remarks may be limited to 3 minutes subject to the discretion of the Common Chair. Members of the public wishing to address one or more of the Boards may submit a "Public Comment Speaker Card" to the Assistant Secretary. While the Retirement Boards encourage your comments, State law prevents the Boards from discussing items that are not set forth on this meeting agenda. The Boards and staff take your comments very seriously and, if appropriate, will follow up on them.

REPORTS FROM COMMITTEES
REPORTS, IDEAS AND COMMUNICATIONS
ADJOURN

NOTICE TO THE PUBLIC

It is the policy of the Boards of Directors of the Sacramento Regional Transit District Retirement Plans to encourage participation in the meetings of the Boards of Directors. At each open meeting, members of the public shall be provided with an opportunity to directly address the Board on items of interest to the public that are within the subject matter jurisdiction of the Boards.

This agenda may be amended up to 72 hours prior to the meeting being held. An agenda, in final form, is located by the front door of Regional Transit's building at 1400 – 29th Street and posted to RT's website at www.sacrt.com.

Any person(s) requiring accessible formats of the agenda or assisted listening devices/sign language interpreters should contact the Human Resources Manager at 916-556-0280 or TDD 916/483-4327 at least 72 business hours in advance of the Board Meeting.

Copies of staff reports or other written documentation relating to each item of business referred to on the agenda are on file with the Human Resources Administrative Technician at 916-556-0298 and/or Clerk to the Board of Directors of the Sacramento Regional Transit District and are available for public inspection at 1400 29th Street, Sacramento, CA. Any person who has questions concerning any agenda item may call the Human Resources Administrative Technician of Sacramento Regional Transit District to make inquiry.

Subject: Receive International Fund Manager Candidate Presentations and Select Fund Manager (ALL). (Bernegger)

ISSUE

Receive International Fund Manager Candidate Presentations and Select Fund Manager (ALL). (Bernegger)

RECOMMENDED ACTION

- A. Adopt Resolution 17-02-____, Directing Staff to Negotiate a Contract with Lazard Asset Management to Provide International Large Cap Fund Manager Services within the International Equity Collective Investment Trust and Authorizing the Sacramento Regional Transit District General Manager/CEO to Execute Said Contract, in a Form Acceptable to Legal Counsel
 - B. Adopt Resolution 17-02-____, Directing Staff to Negotiate a Contract with Pyrford International PLC to Provide International Large Cap Fund Manager Services within the Equity Only Non-U.S. Mutual Fund and Authorizing the Sacramento Regional Transit District General Manager/CEO to Execute Said Contract, in a Form Acceptable to Legal Counsel
 - C. Adopt Resolution 17-02-____, Directing Staff to Negotiate a Contract with Pyrford International PLC to Provide International Large Cap Fund Manager Services within the New Hampshire Investment Trust and Authorizing the Sacramento Regional Transit District General Manager/CEO to Execute Said Contract, in a Form Acceptable to Legal Counsel
- or
- D. Retain JP Morgan as the Boards' International Large Cap Fund Manager

FISCAL IMPACT

Investment Management Fees – Based upon the JP Morgan International Large Cap Fund investment balance of \$22,489,565 as of 11/30/2016:

- A. Lazard Asset Management (Lazard) – Maximum annual fee of 80 basis points (BP) or \$179,917.

Approved:

Presented:

FINAL 01/25/2017

Chief Financial Officer, Acting

Senior Accountant

REGIONAL TRANSIT ISSUE PAPER

Agenda Item No.	Board Meeting Date	Open/Closed Session	Information/Action Item	Issue Date
1	02/01/17	Retirement	Action	12/28/16

Subject: Receive International Fund Manager Candidate Presentations and Select Fund Manager (ALL). (Bernegger)

- B. Pyrford International PLC (Pyrford) – Equity only non-U.S. mutual fund maximum annual fee of 84 BP or \$188,912.
- C. Pyrford – New Hampshire Investment Trust maximum annual fee of 70 BP or \$157,427
or
- D. JP Morgan (current manager) – Performance based pricing: Base fee of 15 BP per year and a performance fee equal to 20% of the fund’s outperformance over the MSCI EAFE Index benchmark, for an annual maximum fee of 75 BP or \$168,672.

Transition Manager – A transition manager is unlikely to be needed for any of the options, but if a transition manager becomes necessary as a result of the form of payout from the JP Morgan fund, the cost is estimated to be between \$10,000 and \$20,000.

DISCUSSION

The Retirement Boards selected JP Morgan as an international large cap fund manager in 2007. Prior to that time, Brandes was managing all of the Plans' international large cap investments. Brandes was a much higher-risk fund manager with very volatile performance depending on market conditions. JP Morgan was hired as a complement to Brandes, offering a more conservative approach aimed at more closely tracking the benchmark while providing protection in a down market. The Retirement Boards terminated their contract with Brandes in 2012 and placed the assets previously managed by Brandes in the State Street Global Advisors' SSgA EAFE Index Fund. JP Morgan currently holds approximately \$22.4 million in Plan assets, while the SSgA MSCI EAFE Index holds approximately \$8.9 million.

Staff and Callan first advised the Boards in June, 2015 that JP Morgan does not appear to be the best fit within the international large cap space for the Plans going forward. At the June 15, 2016 Quarterly Retirement Board Meeting, pursuant to the terms of the Statement of Investment Objectives and Policy Guidelines for the Sacramento Regional Transit District Retirement Plans, the Retirement Boards officially placed JP Morgan on the “Watch List” and gave direction to staff to perform a search for a replacement international large cap fund manager. Subsequently, at the August 31, 2016 Special Retirement Board Meeting, the Boards approved an amended contract with JP Morgan to move to performance based pricing based on JP Morgan’s performance relative to the MSCI EAFE Index benchmark, which could generate significant savings on investment management fees.

As presented at the September 14, 2016 Quarterly Retirement Board Meeting, Callan Associates, Inc. (Callan) has reviewed JP Morgan’s performance based on the June 30, 2016 investment manager returns report (gross of fees), as follows:

REGIONAL TRANSIT ISSUE PAPER

Agenda Item No.	Board Meeting Date	Open/Closed Session	Information/Action Item	Issue Date
1	02/01/17	Retirement	Action	12/28/16

Subject: Receive International Fund Manager Candidate Presentations and Select Fund Manager (ALL). (Bernegger)

	Last Quarter	Last Year	Last 3 Years	Last 5 Years	Last 7 Years
JP Morgan	-0.31%	-12.59%	0.83%	1.29%	6.05%
MSCI EAFE Index	-1.46%	-10.16%	2.06%	1.68%	5.97%
Over/(Under) Performance	1.15%	-2.43%	-1.23%	-0.39%	0.08%

Analysis of this data shows that, when the investment management fees of 70 BP are deducted, JP Morgan underperformed the benchmark during all time periods except for last quarter.

Based on direction from the Boards and input from staff, Callan completed an international fund manager search to replace JP Morgan and each of the Retirement Board Chairs appointed one member of their respective bargaining group to participate in the search committee.

On November 4, 2016 with the assistance of Anne Heaphy, Vice President in Callan’s Fund Sponsor Consulting Group, and Andy Iseri, Senior Vice President and non-U.S. Equity Investment Consultant in Callan’s Global Manager Research group, the search committee met to discuss three candidate firms recommended by Callan.

The committee meeting began with an overview of the Retirement Plans’ current asset structure and fund managers. Mr. Iseri then provided a detailed review of each of the three candidate managers, providing background on staffing, returns, investment philosophy, risk, and other attributes. The search committee opted to move forward with Retirement Board interviews with two of the candidates: Lazard and Pyrford. See Attachment #1 for the search book prepared by Callan on these two firms.

Lazard is considered a value manager that focuses on return on equity (ROE). Per Mr. Iseri, investment managers that focus on ROE tend to have more stable returns, unless lower quality stocks are leading the market. Lazard is a fundamental bottom-up manager that was founded in 1970 and currently manages \$167.8 billion in assets across all of their funds. Lazard is headquartered in New York City, New York.

Pyrford is also considered a value manager with an absolute return approach. Per Mr. Iseri, Pyrford looks at dividend yield and earnings growth. Their core strategy is defensive and they look to position themselves to add value in a down market. Pyrford is headquartered out of London, England, with offices in the U.S., and currently manages \$11.1 billion in total. Pyrford offers two different investment vehicles as options for the Plans 1) a Mutual Fund and 2) the New Hampshire Investment Trust, characteristics of the investment vehicles are below:

REGIONAL TRANSIT ISSUE PAPER

Agenda Item No.	Board Meeting Date	Open/Closed Session	Information/Action Item	Issue Date
1	02/01/17	Retirement	Action	12/28/16

Subject: Receive International Fund Manager Candidate Presentations and Select Fund Manager (ALL). (Bernegger)

Organization / Product	Proposed Vehicle	Investment Minimum (mm)	¹ Fee on \$15mm (CF: mgmt/all-in)	Product Assets (mm)	CF Vehicle Assets (mm)	CF Entry / Exit Fees & Investor Protections	CF Liquidity/ Valuation	EM (%) 5 yr High Low	Policy EM Maximum Limit
Pyrford International PLC Equity Only Non-U.S.	MF R6; BISGX	\$0	0.84%	\$3,510	\$623	2% if redeemed < 30 days	Daily	10.34% Hi: 12% Lo: 8%	20%
	New Hampshire Investment Trust	\$0	0.70% / 0.70%		\$425	None, although ADL may apply for significant transactions.	Monthly		

The committee had constructive dialogue regarding which fund manager(s) should provide presentations to the full Retirement Boards. Pyrford and Lazard were the two top choices with a slight lean towards Pyrford due to down-market protection. Based on all the information presented and discussed, the committee felt it prudent to provide the Board with options. Therefore, the committee decided unanimously to invite Lazard Asset Management and Pyrford International PLC to make detailed presentations to the full Board for consideration.

At the original committee meeting, only the Equity Only Non-U.S. mutual fund Pyrford option was presented. Callan subsequently provided the New Hampshire Investment Trust option to staff. After further discussion, the committee requested that the Boards be presented with both of Pyrford's investment vehicle options.

See Attachment #2 for the Lazard presentation materials, Attachment #3 for Lazard's January outlook and Attachment #4 for the Pyrford presentation materials.

Upon completion of the fund manager candidate presentations, staff will seek action from the Boards to (a) direct staff to negotiate a contract with either Lazard or Pyrford for approval by the General Manager/CEO of Sacramento Regional Transit District or (b) make no changes such that JP Morgan would continue to serve as fund manager.

If the Boards opt to terminate JP Morgan and select either Lazard or Pyrford, staff and Callan will report back to the Boards on progress with their negotiations with the selected manager.

RESOLUTION NO. 17-02-_____

Adopted by the Board of Directors for the Retirement Plan for Sacramento Regional Transit District Employees Who Are Members of the MCEG on this date:

February 1, 2017

**DIRECTING STAFF TO NEGOTIATE A CONTRACT WITH _____
USING THE _____ INVESTMENT VEHICLE TO PROVIDE
INTERNATIONAL EQUITY FUND MANAGER SERVICES AND AUTHORIZING THE
SACRAMENTO REGIONAL TRANSIT DISTRICT GENERAL MANAGER/CEO TO
EXECUTE SAID CONTRACT, IN A FORM ACCEPTABLE TO LEGAL COUNSEL**

Manager Search Process

Manager Search Process Overview

Callan's investment manager searches are underpinned by a disciplined, six-step process:

I. Identify Client and Manager Candidate Considerations

At the onset of each search, Callan meets with the client to review and document any specific characteristics sought in an investment manager. This includes factors such as the manager's strategy and approach, organizational structure, minimum/maximum assets under management, performance criteria relative to an appropriate index and peer group, and risk tolerance. These factors serve as the basis for developing the appropriate quantitative and qualitative screening criteria.

II. Conduct Quantitative Screening

After beginning with the broadest possible universe of candidates, Callan narrows the field using client-specified screening criteria to screen our proprietary database. Screens examine numerous quantitative factors including performance, volatility, correlation with the existing structure, and assets under management. Callan screens performance across multiple time periods, market cycles, and statistical analyses so as to identify consistency of returns and avoid performance bias.

III. Perform Qualitative Screening

Qualitative screening concentrates the field even further. Qualitative screens examine manager type, organizational history, depth and experience of investment personnel, investment process and style, client servicing capability and resource allocation. Callan generates qualitative assessments based on manager research conducted by our dedicated asset class specialists and generalist consultants through regular in-house meetings, conference calls, and on-site manager due diligence.

IV. Oversight Committee Review of Preliminary Recommendations

Callan's Manager Search Committee—an oversight body that is comprised of more than a dozen senior consultants—reviews each search to thoroughly examine candidates and ensure Callan has met the client's specified criteria. Collectively, the Manager Search Committee vets the candidates and identifies semi-finalist candidates to present to the client.

V. Review Semi-finalist Candidates

A manager evaluation document comparing the semi-finalist candidates is prepared for the client. Callan reviews the report with the client to highlight important considerations in conducting the search, compare and contrast the manager candidates, and assist in the identification of finalist candidates.

VI. Interview Finalists

To gain additional insight, finalists are invited to present to the client. The presentations generally include an overview of the manager organization and a specific review of the product being considered. They also provide the opportunity for the client and/or consultant to address any outstanding issues. A winner is typically selected following these presentations.

**Sacramento Regional Transit District
Pension Plan
MSCI WORLD ex-US Search
Candidate Profile
June 2016**

A. Manager Orientation

Sacramento Regional Transit District (“RT”) Pension Plan seeks an investment management firm with an expertise and proven record in managing international equity portfolios.

B. Manager Type

Only qualified investment counselor organizations registered under the Investment Advisors Act of 1940 will be considered. This includes investment counselors and investment counseling subsidiaries of banks, brokerage houses and insurance companies.

C. Investment Style

RT is seeking an international manager to replace its current active manager, JPMorgan EAFE Plus. RT would like to consider MSCI WORLD ex-US managers that would be complementary to their SSgA EAFE Index mandate. Managers will be allowed to have up to 15% exposure to the emerging markets but no more as RT has a dedicated EM mandate with DFA Emerging Markets Core. RT is also in the process of funding a developed international small cap mandate with AQR.

D. Total Assets Under Management

Managers should have a minimum of \$5.0 billion in assets under management at the firm, ideally with a stable and well-diversified client base.

E. Size of Professional Staff

There should be a sufficient number of client service and investment personnel relative to the firm’s account load to assure that RT has reasonable access to the firm and that the investment portfolios are well attended.

F. Experience in Managing Funds

It is essential that candidates exhibit organizational stability and have compensation and ownership programs that provide reasonable assurance of their ability to retain key investment professionals. The organization should have been in business for a minimum of five years. Organizations with less than five-year history, however, may be considered in certain circumstances (e.g. spin-off from parent company).

G. Geographic Location

No preference.

H. Investment Vehicles

Institutional mutual fund or commingled trust.

I. Flexibility of Individual Portfolio Manager

Some flexibility of investment holdings is permissible among accounts; however, the dispersion of portfolio returns across accounts within the firm should be small. There should be a firm-wide investment process.

J. In-House Research Capability

In-house research capability is preferred although limited outsourcing is acceptable.

K. Portfolio Risk Level

The candidates should have a risk level that is at least commensurate with the return achieved. Candidates should demonstrate risk-adjusted performance which compares favorably to the appropriate index and style group. Risk will be considered relative to the benchmark as well as in absolute returns.

L. Historical Performance Criteria

Historical performance criteria will be scored based on the following:

- Cumulative 4, 5 and 7 year data relative to the MSCI WORLD ex-US Index and CAI Non-U.S. Equity Style group
- Rolling three-year periods based on quarterly data compared to the MSCI WORLD ex-US Index and CAI Non-U.S. Equity Style group

Performance will be evaluated relative to each criteria; thus, there will be a maximum of 40 points possible (17 rolling three-year periods and 3 other cumulative periods). Candidates will receive one point for each standard passed. The relative score will be considered for candidates with limited performance history. Performance at a prior employer may be utilized on a case by case basis.

M. Client Servicing

The firm should be service-oriented and responsive to individual client needs. Portfolio managers and client service professionals should be capable of clearly articulating their investment process and explaining it through unfavorable markets. The portfolio manager, or well-qualified client service professional, must be available to answer questions and provide support in a timely basis upon request.

N. Qualities Specifically Sought

- Superior long-term out performance relative to peers and the benchmark
- Disciplined investment process
- Positive risk-adjusted returns
- Low turnover of personnel
- Effective communication skills

O. Qualities to be Avoided

- Firms with current negative publicity
- Organizational instability
- Significant performance attributable to short periods of excess return
- Excessive recent growth in assets
- Concentrated client base

P. Financial Well-Being of Firm

Must be successful in the business of money management. The firm should be professionally managed and have a long-range business plan. Principals should not have recently cashed out. The ideal firm will have strong monetary and/or equity incentives in place for the investment professionals.

Q. Fees

RT seeks a competitive fee schedule that is commensurate with the firm's demonstrated expertise.

Lazard Asset Management
30 Rockefeller Plaza
New York, NY 10112

History

In 1848, three brothers, Alexandre, Simon, and Lazard formed the company now known as Lazard Freres & Co. LLC (LF&Co.), in New Orleans and subsequently in San Francisco. In 1970, the firm established Lazard Asset Management (LAM) as its investment management division and registered with the SEC on May 1, 1970. On January 13, 2003, LAM reorganized and became a separate legal entity and subsidiary of LF&Co. On May 5, 2005, shares of Lazard Ltd, a newly formed Bermuda corporation, began trading publicly on the New York Stock Exchange (ticker: LAZ). As before the initial public offering, Lazard Group LLC continues to be the sole member of LF&Co., a New York limited liability company, which is the parent company of LAM.

Note(s): Due to the recent inception of the proposed commingled vehicle (launched in 1Q15), performance represents the composite, gross-of-fees. Policy maximum to Emerging Market exposure is 10%. Portfolio manager Kevin Matthews joined the strategy in March 2013. Lazard's total International Equity strategy AUM, above, includes the following strategies Int'l Equity, Int'l Equity (ACW ex-US), Int'l Equity Plus, Int'l Equity Plus (ACW ex-US), and Int'l Equity ex-EM. Asset increase in 2012 was attributed to inflows into existing accounts and market appreciation. Asset growth in 2014 was attributed to the net gain of 17 accounts as well as inflows into existing accounts. US exposure on page 7 represents companies domiciled in the United States who derive the majority of their assets, revenues, or business from international markets.

Lazard Asset Management International Equity

Investment Philosophy:

The Lazard International Equity strategy seeks to generate strong relative returns over a full market cycle by investing in companies with strong and/or improving financial productivity at attractive valuations. The strategy typically invests in non-US companies, including those from emerging markets, with a market capitalization generally of \$3 billion or greater. EAFE and ACWI ex-US benchmarked versions are available, resulting in different emerging markets exposure. A version that excludes emerging markets is also available.

Research Process:

The research process is approximately 20% quantitative, but it does not use quantitative models. Lazard employs various screening processes to search global databases for companies that appear to offer strong financial productivity at attractive valuations. Screening seeks to identify companies that are attractively priced (i.e., low price/earnings, price/book and price/cash flow), relative to their financial returns (i.e., return on equity, cash return on equity, return on assets, operating margins). Screening also eliminates stocks that do not have sufficient liquidity to be included in a portfolio. Quantitative processes are used to provide insight to the portfolio management teams for risk management purposes. Optimization programs (BARRA Aegis, Northfield Optimizer, GRAM, Style Research) can be used by Lazard to identify and quantify portfolio risk. The portfolio management teams may limit exposure to various measures of risk including: industries, sectors, countries, and style characteristics (such as large or small cap bias). Individual security exposure is also limited to control risk and maintain liquidity.

Country Strategy:

Country weightings are a residual of Lazard's stock selection process.

Security Selection:

In searching for under-valued, under-appreciated and financially productive stocks, the team follows an investment process that incorporates different types of research, as well as other investment selection techniques: idea sourcing and fundamental research (return analysis, accounting validation, modeling and valuation). The results from their return analysis and accounting validation are incorporated in the construction of a set of expectations for future cash flows and profitability. In each scenario, they value the company. Stocks are selected by the portfolio management team from the wide range of ideas generated by the team and the investment platform. Stocks tend to fall into one of three broad categories: mispriced, compounders and restructuring.

Portfolio Construction:

Portfolio construction is driven by stock selection. The International Equity portfolio management team builds the portfolio selecting one stock at a time with inclusion of a stock in the portfolio primarily dependent on a new idea's attractiveness relative to existing portfolio holdings. Sector and regional exposures are a residual of the investment process. In addition, consideration is given to the impact the stocks inclusion may have on portfolio structure and risk metrics as well as any client specific mandate. The process is ongoing with formal and informal research and portfolio construction discussions held throughout the week. Idea sourcing, fundamental analysis and portfolio construction is a collegiate process involving all members of the portfolio management team; however the lead portfolio manager is ultimately responsible for investment decisions. The objective is to construct a portfolio which achieves the investment objectives and adheres to the investment philosophy and process detailed above. Portfolio construction utilizes risk analysis tools and processes to analyze portfolios to understand portfolio risk exposures and avoid any unintended risk concentrations.

Currency Strategy:

Lazard does not seek to actively manage currency, and does not typically engage in hedging. As part of the risk management process, they seek to ensure that the portfolio is not unduly concentrated in securities denominated in specific currencies or whose business is heavily exposed to adverse movements. However, the team attempts to add value through in-depth analysis of individual companies and not through forecasting complex macroeconomic relationships such as currency rates. Company analysis takes into account the effects of macroeconomic and currency effects.

Sell Discipline:

The sell discipline is an equally important component in the investment process. A review of existing portfolio holdings is triggered when a new idea offers more attractive risk/reward; the price performance objective has been achieved; or the fundamental investment assumptions change and the investment thesis is invalidated. While the fundamental research process is highly collaborative, the portfolio management team makes the final determination of what gets bought and sold in the portfolio.

Lazard Asset Management International Equity Return Analysis Summary

Return Analysis

The graphs below analyze the manager's return on both a risk-adjusted and unadjusted basis. The first chart illustrates the manager's ranking over different periods versus the appropriate style group. The second chart shows the historical quarterly and cumulative manager returns versus the appropriate market benchmark. The last two charts illustrate the manager's ranking relative to their style using various risk-adjusted return measures and returns for rising/declining periods.

Country Allocation Lazard VS MSCI World ex US Index (USD Net Div)

Country Allocation

The chart below contrasts the portfolio's country allocation with that of the index as of September 30, 2016. This chart is useful because large deviations in country allocation relative to the index are often good predictors of tracking error in the subsequent quarter. To the extent that the portfolio allocation is similar to the index, the portfolio should experience more "index-like" performance. In order to illustrate the performance effect on the portfolio and index of these country allocations, the individual index country returns are also shown.

Lazard Asset Management International Equity Equity Characteristics Analysis Summary

Portfolio Characteristics

This graph compares the manager's portfolio characteristics with the range of characteristics for the portfolios which make up the manager's style group. This analysis illustrates whether the manager's current holdings are consistent with other managers employing the same style.

Portfolio Characteristics Percentile Rankings Rankings Against CAI Non-U.S. Equity Style as of September 30, 2016

Sector Weights

The graph below contrasts the manager's sector weights with those of the benchmark and median sector weights across the members of the peer group. The magnitude of sector weight differences from the index and the manager's sector diversification are also shown. Diversification by number and concentration of holdings are also compared to the benchmark and peer group. Issue Diversification represents by count, and Diversification Ratio by percent, the number of holdings that account for half of the portfolio's market value.

Portfolio Characteristics Analysis

CAI Non-U.S. Eq. Style

The charts below illustrate the behavior of the product over different portfolio characteristics through time. As a backdrop the range (from 10th to 90th percentile) is shown for the CAI Non-U.S. Eq. Style Universe. The ranking of the product in this group is shown above each quarter end dot. The average ranking of the product and, if there are at least 12 data points, the standard deviation of that ranking is also shown on the chart. The MSCI World ex US is shown for comparison purposes.

Pyrford International PLC
79 Grosvenor Street
London, GBR W1K-3JU

History

Pyrford International PLC began in 1982 as the in-house manager of the multi-national group ElderIXL Ltd. Australia. It moved the headquarters to London in 1987 and was purchased in a management buy-out in 1991. A marketing/client service office was opened in New York that same year. The Australia and New Zealand offices were sold in 1994. Pyrford has been registered with the SEC since 1989 and gained the first tax-exempt US client in 1993. Pyrford's ultimate parent company is Pyrford Capital Ltd. which is owned 40% by key employees and 40% by Euro Equity Holdings SA, a European investment company. In addition, a 20% stake is held by Strategic Investment Group Ventures, a joint venture between CalPERS Manager Development Program and Strategic Investment Group. In December 2007, Bank of Montreal Capital Markets (Holdings) Limited, a company within the BMO Financial Group (being Bank of Montreal and its subsidiaries), acquired 100% of the share capital of Pyrford International.

Market Value (\$mm): 655

Annual 2015 Return: (3.16%)

Note(s): Performance represents the mutual fund, gross-of-fees. Due to its short track record the performance composite is shown in the performance section as supplemental information. In April 2016 Roderick Lewis was promoted from analyst to portfolio manager. Portfolio manager Bruce Campbell retired in March 2015. Japan portfolio manager, Paul Heaton, retired at the end of April 2012 and was subsequently replaced by Stefan Bain in June 2012. Portfolio manager Geraldine Arrigoni left the firm in September 2013. Asset growth in 2012 was attributed to the gain of four accounts for \$426 million and market appreciation. Asset growth in 2013 was attributed to the gain of five accounts for \$758 million and market appreciation. Asset increase in 2014 was attributed to the gain of five accounts for \$542 million and fund inflows into existing accounts. Performance dispersion between the mutual fund and composite in the first half of 2016 was due to pricing source differences and cash flows.

Pyrford International PLC

Equity Only Non-U.S.

Investment Philosophy:

Pyrford's investment strategy is based on a value-driven, absolute return approach, with both top-down and bottom-up elements. At the country level they seek to invest in countries that offer an attractive market valuation relative to their long-term prospects. At the stock level they identify companies that offer excellent value relative to in-house forecasts of long-term (5 years) earnings growth. This approach is characterized by low absolute volatility and downside protection.

Research Process:

Internally generated research accounts for approximately 70% of the total research effort. The Chief Executive Officer concentrates on macro research; the portfolio managers assisted by regional analysts are engaged in both economic and stock research. Company visits are a key contribution to the build-up of the fundamental macro story. In addition to visiting companies, the investment professionals visit government departments, central banks, economists and local brokers. To supplement the work conducted internally, Pyrford subscribes to Marc Faber, Lombard Street Research and Smithers & Co Ltd. These help challenge Pyrford's internal work and provide a useful sounding board. For statistical data Pyrford utilizes Thomson Datastream. This gives access to national government statistical sources plus the IMF, OECD, and other databases.

Country Strategy:

Country allocation decisions are made by the Investment Strategy Committee, which meets a minimum of once a month. Country allocations are made on a comparative value basis utilizing an internally generated Equity Valuation Matrix. This process produces a value indicator for each market. They will invest in those markets offering the best value.

Security Selection:

The stock selection process includes two separate strands. The first step is an in-depth historical analysis of the company's balance sheet and earnings statements, focusing on a number of key ratios, including Du Pont analysis of return on equity (ROE). The output leaves out companies with levels of ROE driven by excessive leverage and prefers those who generate returns through asset turnover and net profit margin. Each analyst or portfolio manager is responsible for compiling and processing data directly from financial statements. The end result is a standard stock sheet for every company under investigation. Before a decision is made to invest in a company, an in-depth interview with management is conducted to discuss the competitive environment and the ability of the firm's business model to continue to generate an attractive return on equity. Hurdle rates utilized for the reinvestment of retained capital in the business are also scrutinized in detail. Every stock in a Pyrford portfolio is visited in this way before purchase and subsequently on an annual basis. Security selection centers on the formula: dividend yield + Pyrford's forecast 5 year EPS growth. Stocks which do not meet Pyrford's quality and value criteria involving market liquidity, corporate governance, leverage, interest cover etc, will already have been filtered out.

Portfolio Construction:

The first step is deciding the country allocation, done by the Investment Strategy Committee. The stocks in each country are then selected by the regional teams. Once securities have been identified as suitable for investment, stock weights within each country portfolio are determined after further consideration of the following: the long-term value assessment for each stock (dividend yield plus Pyrford's forecast five year EPS growth), the confidence levels around forecasts made, and the liquidity of each stock.

Currency Strategy:

Pyrford takes a defensive posture toward foreign exchange. Their objective is for currency to produce neutral to slightly positive returns. The assessment of whether to hedge is based on the foreign currency's value relative to its purchasing power parity equilibrium level versus the base currency. Subject to client constraints and specified benchmark, their policy is to hedge foreign currencies which are overvalued by more than 10% relative to the base currency or where there is a specific event related risk. Up to 100% of the exposure in a particular foreign currency may be hedged.

Sell Discipline:

All portfolio holdings are continuously monitored by the relevant regional specialist portfolio manager. Generally, stocks are sold for three reasons: 1. The company's share price rises to such an extent that the sum of its dividend yield and forecast long term earnings per share growth falls to a level below that of the local market or alternative stocks within that market. 2. Changes occur in company strategy or industry which in Pyrford's view will affect its long term ability to generate adequate long term earnings per share growth or 3. Pyrford has made a country allocation change and decided to no longer maintain client funds in the country.

Historical Ranking Analysis

This page compares multiple portfolios to each other by analyzing both the historical average ranking for a given metric versus a relevant peer group, as well as the consistency and range (standard deviation) of that ranking over time. The midpoint of each sideways bar represents the average ranking of a given portfolio over time, and the width of the bar represents the consistency and range of that ranking (+/- 1 standard deviation). The comma-separated numbers show the average and standard deviation respectively, of the portfolios ranking. Each portfolio's current ranking is demarcated by a dot, while the corresponding current value of the metric is displayed on the far right.

Comparative Manager Matrix

This page allows for detailed comparisons of multiple managers against each other, as well as versus market indices and peer groups. This comparative analysis can evaluate, for each portfolio pair, one portfolio's performance and risk patterns relative to the other portfolio's performance patterns. The excess return correlation matrices illustrate the extent to which various manager's excess returns versus the appropriate index are correlated to each other. Managers whose excess returns are less correlated with each other tend to diversify each other's active risk. This complementary type of manager mix can have a beneficial effect on the resulting active risk/return tradeoff.

Comparative Manager Matrix

This page allows for detailed comparisons of multiple managers against each other, as well as versus market indices and peer groups. The holding overlap matrices illustrate the degree of individual stock overlap between various portfolios' holdings. The number in parentheses in the lower left corner of each box is the number of stocks that a given portfolio pair hold in common. The number in the upper left corner is the total weight of these overlapping holdings in the y-axis (vertical) portfolio. The number in the lower right corner is the total weight of those same stocks in the x-axis (horizontal) portfolio.

Definitions and Disclosures

Definitions

Alpha measures a portfolio's return in excess of the market return adjusted for risk. It is a measure of the manager's contribution to performance with reference to security selection. A positive alpha indicates that a portfolio was positively rewarded for the residual risk which was taken for that level of market exposure.

Beta measures the sensitivity of rates of portfolio returns to movements in the market index. A portfolio's beta measures the expected change in return per 1% change in the return on the market. If a beta of a portfolio is 1.5, a 1 percent increase in the return on the market will result, on average, in a 1.5 percent increase in the return on the portfolio. The converse would also be true.

Diversification Ratio – The ratio of the number of securities comprising the most concentrated half of the portfolio market value divided by the total number of portfolio securities. This value expresses to what extent a portfolio is equally weighted versus concentrated, given the number of names in the portfolio. This value can range from a high of 50% (equal weighted) to a low of 1% (half of the portfolio in 1% of the names).

Downside Risk stems from the desire to differentiate between "good risk" (upside volatility) and "bad risk" (downside volatility). Whereas standard deviation punishes both upside and downside volatility, downside risk measures only the standard deviation of returns below the target. Returns above the target are assigned a deviation of zero. Both the frequency and magnitude of underperformance affect the amount of downside risk.

Excess Return Ratio is a measure of risk adjusted relative return. This ratio captures the amount of active management performance (value added relative to an index) per unit of active management risk (tracking error against the index.) It is calculated by dividing the manager's annualized cumulative excess return relative to the index by the standard deviation of the individual quarterly excess returns. The Excess Return Ratio can be interpreted as the manager's active risk/reward tradeoff for diverging from the index when the index is mandated to be the "riskless" market position.

Information Ratio measures the manager's market risk-adjusted excess return per unit of residual risk relative to a benchmark. It is computed by dividing alpha by the residual risk over a given time period. Assuming all other factors being equal, managers with lower residual risk achieve higher values in the information ratio. Managers with higher information ratios will add value relative to the benchmark more reliably and consistently.

Market Capitalization (weighted median) – The weighted median market cap is the point at which half of the market value of the portfolio is invested in stocks with a greater market cap, and consequently the other half is invested in stocks with a lower market cap.

Definitions (continued)

MSCI Combined Z Score is the difference between the MSCI Growth Z Score and the MSCI Value Z Score (Growth - Value). A significant positive Combined Z Score implies significant "growthiness" in the stock or portfolio. A Combined Z Score close to 0.00 (positive or negative) implies "core-like" style characteristics, and a significantly negative Combined Z Score implies more "valueyness" in the stock or portfolio.

MSCI Growth Z Score is a holdings-based measure of the "growthiness" of an individual stock or portfolio of stocks based on fundamental financial ratio analysis. The MSCI Growth Z Score is an aggregate score based on the growth score of five separate financial fundamentals: Long Term Forward Earnings Growth, Short Term Forward Earnings Growth, Current Internal Growth (ROE * (1-payout ratio)), Long Term Historical Earnings Growth, and Long Term Historical Sales Growth.

MSCI Value Z Score is a holdings-based measure of the "valueyness" of an individual stock or portfolio of stocks based on fundamental financial ratio analysis. The MSCI Value Z Score is an aggregate score based on the value scores of three separate financial fundamentals: Price/Book, Price/Forward Earnings, and Dividend Yield.

Number of Issues in Top Half of MV measures the number of stocks (largest holdings) making up half of the market value of the portfolio.

R-Squared indicates the extent to which the variability of the portfolio returns is explained by market action. It can also be thought of as measuring the diversification relative to the appropriate benchmark. An r-squared value of .75 indicates that 75% of the fluctuation in a portfolio return is explained by market action. An r-squared of 1.0 indicates that a portfolio's returns are entirely related to the market and it is not influenced by other factors. An r-squared of zero indicates that no relationship exists between the portfolio's return and the market.

Relative Sector Variance – A measure illustrating how significantly a portfolio currently differs from the sector weights of the index. This measure is the sum of the differences (absolute value) between the portfolio and index sector weights across all sectors. The higher the number the more aggressive the deviation from the index sector weights, and vice versa. This relative risk measure can help explain the magnitude of past tracking error and potential future tracking error versus the index.

Relative Standard Deviation is a simple measure of a manager's risk (volatility) relative to a benchmark. It is calculated by dividing the manager's standard deviation of returns by the benchmark's standard deviation of returns. A relative standard deviation of 1.20, for example, means the manager has exhibited 20% more risk than the benchmark over that time period. A ratio of .80 would imply 20% less risk. This ratio is especially useful when analyzing the risk of investment grade fixed-income products where actual historical durations are not available. By using this relative risk measure over rolling time periods one can illustrate the "implied" historical duration patterns of the portfolio versus the benchmark.

Definitions (continued)

Sector Concentration – A measure of current portfolio diversification by economic sector (equity) or market sector (fixed income) to illustrate potential risk from concentrated sector exposures. The measure itself represents how few sectors contain half of the portfolio market value. A low number means the assets are concentrated in a few sectors and potentially highly exposed to the risks of those sectors.

Sharpe Ratio is a commonly used measure of risk-adjusted return. It is calculated by subtracting the "risk-free" return (usually 3 Month Treasury Bill) from the portfolio return and dividing the resulting "excess return" by the portfolio's risk level (standard deviation). The result is a measure of return gained per unit of risk taken.

Standard Deviation is a statistical measure of portfolio risk. It reflects the average deviation of the observations from their sample mean. Standard deviation is used as an estimate of risk since it measures how wide the range of returns typically is. The wider the typical range of returns, the higher the standard deviation of returns, and the higher the portfolio risk. If returns are normally distributed (i.e., has a bell shaped curve distribution) then approximately 2/3 of the returns would occur within plus or minus one standard deviation from the sample mean.

Total Portfolio Risk is a measure of the volatility of the quarterly excess returns of an asset. Total risk is composed of two measures of risk: market (non-diversifiable or systematic) risk and residual (diversifiable or unsystematic) risk. The purpose of portfolio diversification is to reduce the residual risk of the portfolio.

Tracking Error is a statistical measure of a portfolio's risk relative to an index. It reflects the standard deviation of a portfolio's individual quarterly or monthly returns from the index's returns. Typically, the lower the Tracking Error, the more "index-like" the portfolio.

Treynor Ratio represents the portfolio's average excess return over a specified period divided by the beta relative to its benchmark over that same period. This measure reflects the reward over the risk-free rate relative to the systematic risk assumed.

Disclosure Statement

The preceding report has been prepared for the exclusive use of the Sacramento Regional Transit District. Unless otherwise noted, performance returns contained in this report do not reflect the deduction of investment advisory fees. The returns in this report will be reduced by the advisory fees and any other expenses incurred in the management of an investment account. The investment advisory fees applicable to the advisors listed in this report are described in Part II of each advisor's form ADV.

The following graphical and tabular example illustrates the cumulative effect of investment advisory fees on a \$100 investment growing at 10% over ten years. Fees are assumed to be paid monthly.

The Cumulative Effect of Advisory Fees

Accumulated Dollars at End of Years

	1	2	3	4	5	6	7	8	9	10
No Fee	110.0	121.0	133.1	146.4	161.1	177.2	194.9	214.4	235.8	259.4

List of Callan's Investment Manager Clients

Confidential – For Callan Client Use Only

Callan takes its fiduciary and disclosure responsibilities to clients very seriously. We recognize that there are numerous potential conflicts of interest encountered in the investment consulting industry and that it is our responsibility to manage those conflicts effectively and in the best interest of our clients. At Callan, we employ a robust process to identify, manage, monitor and disclose potential conflicts on an on-going basis.

The list below is an important component of our conflicts management and disclosure process. It identifies those investment managers that pay Callan fees for educational, consulting, software, database or reporting products and services. We update the list quarterly because we believe that our fund sponsor clients should know the investment managers that do business with Callan, particularly those investment manager clients that the fund sponsor clients may be using or considering using. Please refer to Callan's ADV Part 2A for a more detailed description of the services and products that Callan makes available to investment manager clients through our Institutional Consulting Group, Independent Adviser Group and Fund Sponsor Consulting Group. Due to the complex corporate and organizational ownership structures of many investment management firms, parent and affiliate firm relationships are not indicated on our list.

Fund sponsor clients may request a copy of the most currently available list at any time. Fund sponsor clients may also request specific information regarding the fees paid to Callan by particular fund manager clients. Per company policy, information requests regarding fees are handled exclusively by Callan's Compliance Department.

Callan

Disclosure

The table below indicates whether one or more of the candidates listed in this report is itself a client of Callan as of the date of the most recent quarter end. These clients pay Callan for educational, software, database and/or reporting products and services; refer to our Form ADV 2A for additional information. Given the complex corporate and organizational ownership structures of many investment management, trust/custody and securities lending firms, the parent and affiliate firm relationships are not listed here if they don't separately contract with Callan.

The client list below may include parent companies who allow their affiliates to use some of the services for which they contract with Callan (eg, educational services including published research and attendance at conferences and workshops). Because Callan's investment manager client list changes periodically, the information below may not reflect changes since the most recent quarter end. Fund sponsor clients are welcome to request a complete list of Callan's investment manager clients at any time.

As a matter of policy, Callan follows strict procedures so that investment manager client relationships do not affect the process or outcome of any investment manager search or evaluation conducted by Callan.

Investment Philosophy, Objectives and Process

Our Investment Philosophy

- Focus on those companies that are financially productive and inexpensively valued
- Add value through stock selection and portfolio management

Our Investment Objectives

- Outperform relevant benchmark over a full market cycle
- Participate in rising markets; preserve capital in falling markets
- Outperform our investment competitors
- Seek consistent results

Our Investment Process

Lazard's investment process for research and portfolio construction is presented here as sequential steps; in practice the process is neither static, nor sequential, but ongoing.

Idea Sourcing

Idea Sourcing is a collaboration of Lazard Asset Management's global resources

- Seeking strong and/or improving financial productivity at attractive valuations:
 - Quantitative screens
 - Sector specialists
 - Portfolio managers
 - Company meetings
- Identify industry/company inflection points
- Strategic/management changes

Daily meetings are scheduled to ensure complete sharing and communication of ideas among sector specialists and regional portfolio managers.

Fundamental Analysis

Return Analysis

Maximize understanding by:

- Leveraging sector expertise and relationships
- Identify key drivers of profitability
- Sustainability and directing financial productivity
- Links returns to valuation
- Management assessment
- Sensitivity analysis/macro scenarios

Valuation

- Identify value drivers
- Fundamental valuation/margin/cash flow
- Current vs. historic valuation
- Valuation vs. peer group

Accounting Validation

- Ensure financial statement support headline metrics
- Analyze management accounting choices
- Quantify significant risk factors
- Assess balance sheet strength and sustainability
- Corporate governance/ESG

Modeling/Investment Thesis/Insight

- Incorporate identified discrepancies into financial model
- Identify catalyst
- Upside potential to target valuation/price
- Downside risk to valuation support level

Differentiated Investment Perspective and Insight

Portfolio Construction

Buy Discipline

Portfolio construction is driven by stock selection:

- Relative to existing holdings
- Impact on portfolio structure
- Impact on risk metrics
- Client mandate and objectives

Sell Discipline

Review of investment thesis is triggered when:

- Performance objective is achieved
- New ideas offer more attractive risk/reward
- Fundamental drivers change or thesis is invalidated

Portfolio team makes final determination

Investment Process Example

Total S.A.

Company Overview: Total is an all-weather integrated major oil company positioned to navigate through the oil price trough and still provide ample gearing to eventual oil price recovery.

LAM History w/ Company: LAM energy analyst, Peter Hunsberger, is a geologist, has been at Lazard for 25 years and meets with senior management of Total (and other energy producers) several times per year. Additionally, Peter monitors quarterly company earnings and other significant announcements, makes fields trips and attends industry conferences. Peter writes up significant company and industry news and circulates his analysis to Portfolio Mangers. Total has been owned in Lazard portfolios several times in the last 25 years.

Differentiated Insight: Total is in the “sweet spot” of falling costs, rising production and possibly rising oil prices at a time of cheap valuation.

Idea Sourcing:

- Oil prices fell by half in the year preceding our purchase, heightening our interest in energy given our expectations for an eventual supply reduction response.
- Total brings sufficient financial resilience, attractive valuation and company-specific drivers.
- PM team regularly meets with Energy team to review opportunity set and industry developments. Former Total CEO, Christophe de Margerie, killed in a plane crash in Oct. 2014. Peter met with new CEO, Patrick Pouyanne, several times to asses his impact on the company.

Fundamental Research View:

- Total is better positioned than peers to weather downturn, while still offering significant potential for cash flow recovery.
- Strong, capable management: New CEO, Patrick Pouyanne, and team are laser-focused on aggressively driving costs lower while simultaneously delivering new major capital projects. Message from management is that they will do whatever it takes to return Total to being cash flow positive in 2017.

Return Analysis

- Capex is set to decline from \$26bn in 2014 to \$20bn or less in 2017. Spending decline will be helped by: 1) roll-off of spending on major projects; 2) hiatus on approving new projects; and 3) cost deflation.
- Opex cost reduction targets are equally ambitious, with Total aiming to cut 2017 opex by \$3bn compared to 2014 levels.
- New developments coming on stream over the 2015-18 period will underpin mid-single digit production growth, with management pointing to 6-7% CAGR from 2014-17 and 5% from 2014-19.

Investment Process Example

Total S.A.

Fundamental Research View (cont.):

- Moreover, new production is expected to have higher cash margins than the base business due to production mix (more oil-linked production), more favorable fiscal terms and lower unit costs.
- Cash flow inflection approaching: Total is approaching a 'sweet spot' in its investment cycle, with production and cash flow set to increase, while capex declines as major projects are completed. We expect to see a significant cash flow inflection in 2016, with further improvement in 2017-18.
- As capex moves lower and new projects begin to contribute cash, financial productivity should begin to inflect higher from current low levels. A recovery in oil prices toward \$60/bbl will further underpin an improving ROCE.
- Balance sheet is sufficiently strong, with net debt/cap under 30% and credit rating still strong.
- \$10bn asset disposal program for 2015-17 will help narrow near-term cash flow deficit, as will scrip dividend issuance in 2015.

Valuation

- Valuation is very inexpensive on price/book, which looks through current commodity price weakness. Total trading at just 1.1x book, near the low end of its 10-year range. We project 20%+ upside to price objective, plus a 6% dividend yield. (NB: We do NOT expect a dividend cut.) Our bull case objective implies 35%+ total return.

Accounting Validation

- Accounting validation: Total reports under IFRS accounting, consistent with European oil peers. Total uses 'successful efforts' accounting for its Upstream operations, consistent with other major oil peers and most large cap US E&Ps. Auditors have provided a clean fairness opinion.

ESG

- Total and certain European peers called for the development of carbon pricing mechanisms at the UN Framework Convention on Climate Change, in June 2015. Separately, Total is taking steps to be more energy efficient and environmentally sensitive, including plans to reduce continuous flaring and to improve the energy efficiency of the company's facilities. Additionally, Total is investing more than peers in solar energy.

Portfolio Construction:

- Initial purchase in August 2015 at 1% position size. Purchasing Total moved the portfolio from a slight underweight in energy to a modest overweight.
- Position was sold in November 2016 with a small gain and with positive attribution in a down oil market. The sale proceeds were used to fund the purchase of higher-conviction Statoil.

Three Levels of Risk Monitoring

A Solid Foundation

TAB

Distinguishing Features

Lazard International Equity Strategies

- **Robust bottom up relative value culture and process**
 - Buy stocks, not markets
 - Relative Value trade-off between financial productivity and valuation
 - Borderless alpha generation
 - Strong emerging markets expertise
- **Exploiting market inefficiencies**
 - Sustainability of returns
 - Structural change
 - Short term focus on news flow
- **Flexibility of implementation**
 - Market Cap
 - Geography
 - Sectors
- **Historically consistent and attractive pattern of performance**
 - Downside protection with upside participation
 - Attractive risk-adjusted returns

Outperformance/Underperformance

Rolling 3 Year Annualized Returns

Lazard International Equity vs. MSCI EAFE Index

Attribution – 3 Year

Lazard International Equity vs. MSCI EAFE Index

As of 31 December 2016. All data shown in USD and reflects rounding.

¹ Active weight reflects the Lazard International Equity average weight subtracted by the MSCI EAFE Index average weight.

*During the 3 year period, the portfolio's annualized weighted emerging market return was -12.2% versus -2.6% for the MSCI Emerging Markets Index.

The allocations mentioned are based upon a portfolio that represents the proposed investment for a fully discretionary account. Allocations are subject to change.

Attribution is based upon a representative portfolio and is versus the benchmark noted. Attribution analysis is provided for illustrative purposes only, as values are calculated based on returns gross of fees. Performance would be lower if fees and expenses were included. Past performance is not a reliable indicator of future results. This information is for illustrative purposes only and is supplemental to the "GIPS® Composite Information."

Previously he was Vice President and Head of Institutional Services for Dimensional Fund Advisors. He has a BA in Economics from St. Francis College.

GIPS Composite Information

Lazard International Equity

Benchmark:	MSCI EAFE Index
Reporting Date:	30 September 2016
Composite Inception Date:	01 June 1995
Reporting Currency:	U.S. Dollar

Composite Description

The composite returns represent the total returns of all fully discretionary portfolios with an International Equity investment mandate and a minimum of \$5 million in assets under management. Lazard International Equity seeks to generate strong relative returns over a market cycle by investing in companies with strong and/or improving financial productivity at attractive valuations. The strategy typically invests in securities of non-US companies, including those from emerging markets, with a market capitalization generally of \$3 billion or greater. The emerging markets equity allocation is implemented by investing in individual securities.

Calculation of Performance Returns

Lazard's account inclusion policy is the first full month or the end of the month in which the account is fully invested. The returns of the individual portfolios within the composite are time-weighted, use trade date accounting, are based upon monthly portfolio valuations, and include the reinvestment of all earnings as of the payment date. The composite returns are asset-weighted based upon beginning period market values. Additional information regarding policies for valuing portfolios, calculating performance, and preparing compliant presentations are available upon request. Composite returns are shown before taxes and the deduction of custody fees (except for mutual funds which includes all fees). Exchange rates for composite accounts and the benchmark are normally based on the 16:00 GMT fix, with the exception of US Mutual Fund valuation exchange rates, which are based on the 21:00 GMT fix. The composite and benchmark returns are reported net of foreign withholding taxes on dividends, interest and capital gains. The composite returns presented represent past performance and is not a reliable indicator of future results, which may vary. As of April 1, 2010, this composite changed its name from International Equity with Emerging Markets Securities to International Equity.

Fee Schedule

Lazard's standard fee schedule for International Equity accounts is 0.75% of the first \$100 million of assets and 0.50% of the balance. (This fee schedule may be presented in non-US local currency equivalents based on prevailing exchange rates.) Actual account fees, inclusive of performance-based fees (if applicable) are used in the construction of composite net of fee performance unless otherwise noted. A complete list and description of all Lazard composites is available upon request.

Benchmark Information

The MSCI Europe, Australasia, Far East Index (EAFE) is an arithmetic, market value-weighted average return net of dividends taxation which is derived from over 900 securities listed on the stock exchanges of countries in Europe, Australasia and the Far East. The Index is compiled by Morgan Stanley Capital International.

GIPS Compliance and Verification Status

Lazard Asset Management claims compliance with the Global Investment Performance Standards (GIPS®) and has prepared and presented this report in compliance with the GIPS standards. Lazard Asset Management has been independently verified for the period of January 1, 1993 through December 31, 2015. The verification reports are available upon request. Verification assesses whether (1) the firm has complied with all the composite construction requirements of the GIPS standards on a firm-wide basis and (2) the firm's policies and procedures are designed to calculate and present performance in compliance with the GIPS standards. Verification does not ensure the accuracy of any specific composite presentation. Lazard Asset Management is the "Firm" to which the GIPS Standards apply (Frankfurt office included in Firm definition as of January 1, 2003). GIPS is a registered trademark of CFA Institute. CFA Institute has not been involved in the preparation or review of this presentation. The composite creation date is January 2002.

Important Information

Equity securities will fluctuate in price; the value of your investment will thus fluctuate, and this may result in a loss. Securities in certain non-domestic countries may be less liquid, more volatile, and less subject to governmental supervision than in one's home market. The values of these securities may be affected by changes in currency rates, application of a country's specific tax laws, changes in government administration, and economic and monetary policy. Emerging market securities carry special risks, such as less developed or less efficient trading markets, a lack of company information, and differing auditing and legal standards. The securities markets of emerging market countries can be extremely volatile; performance can also be influenced by political, social, and economic factors affecting companies in emerging market countries.

Certain information included herein is derived by Lazard in part from an MSCI index or indices (the "Index Data"). However, MSCI has not reviewed this product or report, and does not endorse or express any opinion regarding this product or report or any analysis or other information contained herein or the author or source of any such information or analysis. MSCI makes no express or implied warranties or representations and shall have no liability whatsoever with respect to any Index Data or data derived therefrom. The MSCI Index Data may not be further redistributed or used as a basis for other indices or any securities or financial products.

US Natural Gas Outlook

January 2017

This presentation and all research and materials enclosed are property of Lazard Asset Management LLC.

Information and opinions presented have been obtained or derived from sources believed by Lazard to be reliable. Lazard makes no representation as to their accuracy or completeness. All opinions expressed herein are as of the date of this presentation and are subject to change.

Provided pursuant to the request of Sacramento Regional Transit District. Not for further distribution.

US Natural Gas Prices

15 Years

- Natural gas prices remain well below 2003-2008 levels seen prior to impact of US shale supply.

US Natural Gas Marketed Production

30 Years

- Gas supply remains resilient despite the sharp decline in gas drilling.
- Why? Ample low-cost supply coming from Marcellus and from 'associated gas' in oil shale plays.

US Natural Gas Prices

1 Year

- Front month gas price is ~\$3.30/mcf, nearly doubling off the weather-impacted low of March 2016.

US Natural Gas Inventories

5 Years, Seasonally Adjusted

- US gas inventories were above the top end of the 5-year range for most of 2016, reflecting a warm 2015-16 winter (= low demand).

US Natural Gas Futures Curve

- Futures market expectations have shifted materially lower
- Current curve sees gas trading at \$2.75-3.50/mcf over most of the next 7-8 years (equivalent to ~\$17-21/bbl of oil).

US Gas Rig Count

5 years

- Rig count is up 50 units (or 65%) since August but remains 80-85% below where it was five years ago.

Conclusion

- US natural gas prices have recovered from weather-induced lows under \$2/mcf in March 2016.
- Futures market suggests gas will trade in \$2.75-3.50/mcf range over most of next 7-8 years.
- We expect US gas prices to remain 'cheap' compared to oil and to global LNG in coming years (providing competitive advantage to US customers).
- Gas demand likely to increase due to industrial demand growth, LNG exports and power generation shift from coal to gas/solar/wind.

31 March 2000 – 31 December 2016 (quarterly data)	
Downside Capture	62.01%
Upside Capture	86.45%

Performance relates to the gross of fees Pyrford International Ltd 'International Equity (Base Currency US\$) Composite'. This is supplementary information. Please see complete GIPS compliant presentation at the end of this document. **Past performance does not guarantee future results.**

Pyrford's investment philosophy

- Five year time horizon
- Total return approach \Rightarrow Dividend Yield + 5 year Earnings Growth forecast
 - Applies to country and stock analysis
- “Absolute” not “*relative*” risk - possible zero weight in any country, sector or stock
 - Key to controlling risk
 - “we won’t invest in a company or country simply because it’s big”
- Not index oriented
- Low absolute volatility
- Low portfolio turnover

Country analysis

- We embrace macro-economic analysis to assist in portfolio allocation
- Total return forecast by country on a five year view
 - A combination of top-down and bottom-up analysis
- Avoid markets representing poor value
 - e.g. Japan in the 1990s
- Current investable universe of 33 countries, including 10 not included in the MSCI Developed Markets Indices

Pyrford screening and stock selection process

For illustration purposes only

Total – process in action

- Initial purchase made in 1993
- Why we bought it:
 - Impressive reserve replacement record
 - Industry leading access to lucrative Middle East and African projects
 - Substantial gas assets
 - Proven exploration and production project management skills

Recent company meetings:

Date	With	Where
13 February 2014	Christophe de Margerie, Chairman and CEO	London
11 June 2014	Martin Deffontaines, Investor Relations Guillaume Chalmin, Vice President Strategy for Exploration & Production	Paris
15 December 2014	Nicolas Fumex, Investor Relations	London
12 January 2015	Patrick de La Chevardiere, CFO	London
12 February 2016	Helle Kristoffersen, Senior Vice President Strategy & Business Intelligence	London
23 September 2016	Ladislav Paszkiewicz, Senior Vice President of Mergers & Acquisitions	London

Total – why we continue to own it

- Current value indicator: 7.5%
- Attractive 5% dividend yield
- Is the dividend sustainable?
 - CAPEX shuffle – guidance for \$15-17bn p.a. 2017-20
 - Production growth – aiming to achieve 5% p.a. on average up to 2020
 - Operating cost savings – targeting \$4bn opex reduction 2015-18
 - Asset sales – ongoing disposal of non-core assets
 - Balance sheet support – gearing at 30%
 - Scrip issuance – reducing the cash cost of the dividend

Strategy portfolio construction

- Portfolio of 70 – 100 stocks
- Model country allocation determined by Investment Strategy Committee, comprising Tony Cousins, Paul Simons, Daniel McDonagh, Suhail Arain and Bruce Campbell
 - Minimum country weight 0%, maximum country weight driven by size and volatility of each market
- Stock selection by country
 - Country portfolio manager determines which stocks
 - New sales and purchases presented to full global investment team
 - New positions tend to be initially small
- All client portfolios identical (subject to investment restrictions)
- Quarterly rebalancing back to model weightings
- Overall 'check' by CIO

Sell decisions

- Competition of ideas - we need to make space for a stock with better valuation fundamentals
- Valuation - a good stock has become too expensive
- A material change in our assessment of the company's fundamentals
- An overall change to portfolio positioning - reduce country weight

Pyrford's professionals – Investment Strategy Committee

31 December 2016

Tony Cousins MA (Hons), CFA

Role: Chief Executive & Chief Investment Officer

Years with:
Pyrford 28
Industry 32

After graduating from Cambridge University in 1985 with a Bachelor of Arts, Tony joined Daiwa International Capital Management in London as an Equity Portfolio Manager. He joined Pyrford in 1989 and obtained his Master of Arts and became a CFA charter-holder in 1990.

Tony headed Pyrford's European and UK investment management activities for Pyrford for almost 20 years and was promoted to the position of Joint Chief Investment Officer in November 2009. On 1 January 2011 Tony was further promoted to the roles of Chief Executive and Chief Investment Officer.

Bruce Campbell B Com (Hons)

Role: Strategic Investment Advisor

Years with:
Pyrford 30
Industry 47

Bruce has over 40 years' experience in the international investment industry. After graduating from Melbourne University in 1969 Bruce managed the investment operations of an Australian based general insurance company for 12 years and then founded the predecessor company to Pyrford in Melbourne in 1982 – at that stage as part of the multi-national Elders IXL group. In 1987 Bruce moved the investment operations to London and in 1991 headed the buy-out of the investment management subsidiary from the Elders organisation. At that time the company's name was changed to Pyrford International.

Bruce remained Chief Executive and Chief Investment Officer until 31 December 2010 at which time he took up the role of Investment Chairman.

Bruce retired from Pyrford on 31 March 2015 and became a Strategic Investment Advisor to Pyrford on 01 April 2015.

Paul Simons MA (Hons), CFA

Role: Head of Portfolio Management Asia-Pacific

Years with:
Pyrford 20
Industry 20

Paul joined Pyrford in 1996 after graduating from Oxford University with a degree in geography. He began his fund management career in 1997 and spent seven years covering South East Asia, Hong Kong, Taiwan, Korea and Australasia before being promoted to the role of Portfolio Manager for Australia and New Zealand in 2003. Paul became a CFA charter holder in 2000, as well being awarded his Master of Arts. Paul was appointed Head of the Asia-Pacific team and a member of the Investment Strategy Committee in 2008.

Daniel McDonagh MA (Hons), CFA

Role: Head of Portfolio Management Europe & UK

Years with:
Pyrford 19
Industry 19

Daniel joined Pyrford in October 1997 after graduating from Oxford University with a degree in Politics and Economics. Daniel worked as a research analyst within the European portfolio management team prior to his promotion to Portfolio Manager in 2003. He became a CFA charter holder in 2000, was appointed Head of Europe and the UK in October 2009 and was awarded his Master of Arts in 2010.

Suhail Arain, LLB (Hons) ACA MSc, CFA

Role: Head of Portfolio Management Americas

Years with:
Pyrford 8
Industry 19

Suhail joined Pyrford in September 2008 as a Portfolio Manager covering North American equities. Prior to joining Pyrford, Suhail worked at Scottish Widows as a global equities portfolio manager and research analyst covering a number of sectors including the energy, telecommunication and technology sectors. He has over 18 years experience in the asset management industry with particular emphasis in US and global equities. Suhail graduated from King's College, London with a degree in Law and completed a Masters' in Finance from London Business School. He is also a qualified chartered accountant and holds the CFA designation. Suhail has also held positions at KPMG, Hambros Merchant Bank (in corporate finance), Prudential and ABP Investments.

Pyrford's professionals

31 December 2016

Peter Moran, MA (Hons), CFA
Role: Portfolio Manager
Team: Europe & UK

Years with:
Pyrford 13
Industry 13

Peter joined Pyrford in October 2003 having previously worked for Culross Global Management and Merrill Lynch. In 2001 he graduated from Oxford University with a degree in History. Peter worked as a research analyst within the European portfolio management team until November 2009 at which time he was promoted to the position of Portfolio Manager. He became a CFA charter holder in 2007.

Andrew Sykes BA (Hons), CFA
Role: Investment Analyst
Team: Americas

Years with:
Pyrford 3
Industry 9

Andrew joined Pyrford in July 2013 as an Investment Analyst covering North America and was promoted to Portfolio Manager in 2015 to cover Latin America. Andrew's previous roles include 3 years in portfolio management roles covering Global markets at Schroders and most recently Senhouse Capital. He graduated from Oxford University in 2005 with a BA (Hons) degree in Politics, Philosophy & Economics. Andrew is a CFA charter holder.

Anneka Desai, BA (Hons)
Role: Investment Analyst
Team: Europe & UK

Years with:
Pyrford 1
Industry 1

Anneka joined Pyrford in October 2015 after graduating in June 2015 with a BA (Hons) degree in Economics from Cambridge University.

Nabil Irfan BSc (Hons), CFA
Role: Portfolio Manager
Team: Europe & UK

Years with:
Pyrford 11
Industry 16

Nabil joined Pyrford in September 2005 as a research analyst within the European portfolio management team. In November 2009 he was promoted to the position of Portfolio Manager. Prior to joining Pyrford Nabil worked for 5 years at JPMorgan Asset Management in Equity Research as a Utilities Analyst, and prior to that as a research assistant in their technology, media and telecoms (TMT) team. Nabil graduated from University College London with an Economics degree in September 2000 and became a CFA charter holder in 2004.

Roderick Lewis BSc, CFA
Role: Portfolio Manager
Team: Asia-Pacific

Years with:
Pyrford 3
Industry 15

Roderick joined Pyrford in November 2013 as an Investment Analyst in the Asia portfolio management team. Roderick holds a BSc in Economics and Management from Cardiff University and is a CFA Charter holder. He joins Pyrford following 6 years on the Asian team at Legal and General in London and a further 3 analysing Asian equities at CCLA Investment Management.

Lars Nielsen, BSc MSc
Role: Senior Product Specialist
Head of RM & BD

Years with:
Pyrford 8
Industry 28

Lars has overall responsibility for all client oriented activities at Pyrford. He has over 25 years' experience in the asset management industry. Prior to joining Pyrford, Lars worked in similar roles at Dalton Strategic Partnership, TT International and Alliance Capital. Lars started his career in various roles at Barra, one of the world's leading investment analytics companies. He spent 9 years there and his last position was as a Director for the US equity money manager business. Before going to the US he held positions in the European part of the business. Lars graduated from Aarhus Business School in his native Denmark with a MSc and BSc in Business Administration with a concentration in Finance. Also studied at Aarhus University mathematics department and San Francisco State University MBA program.

Jun Yu BA MBA, CFA
Role: Portfolio Manager
Team: Asia-Pacific

Years with:
Pyrford 8
Industry 17

Jun joined Pyrford in October 2008 and is a Portfolio Manager in the Asia portfolio management team with a focus on stock selection in Hong Kong and Taiwan. She has worked in a number of investment businesses in both China and London and most recently was an equity sales person for Daiwa SMBC Europe. She has a degree in Literature from Shanghai International Studies University and an MBA from INSEAD in Paris. Jun is a native Mandarin speaker.

Henrietta Brooks, BA (Hons)

Selecting the stocks for your portfolio

- Screening – Which companies should be researched in depth?
 - Eliminate small companies and highly leveraged companies
 - Rank universe on basis of selected fundamentals (utilising a combination of dividend yield, return on equity and PE ratio)
- Stock sheets – Scrutiny of the past assists in evaluating the future
 - In-house, from original sources
 - Discipline across the regions
 - Helps determine long-term sustainable growth rates:
 - › Disaggregation of return on equity – Du Pont analysis
 - › Quality of earnings and balance sheet
 - 5 year earnings per share forecasts
- Company interviews – Every company, every year
 - Must visit company prior to purchase and annually thereafter
 - Examine the business model and long-term strategy
 - Focus on visibility of earnings and sustainability of return on equity
- Peer review – All buy and sell ideas are scrutinised by entire investment team

Selecting stocks for your portfolio

- Emphasis on company visits and management interviews
- In-depth analysis of industry competitive framework and structural corporate competitive advantage
- Sustainability of ROE

International Equity EAFE strategy - rolling 5-year absolute volatility

As at 31 December 2016. USD.

Source: Pyrford International

Based on gross of fees monthly composite returns on a 5-year rolling basis from June 2001 to 31 December 2016 against MSCI EAFE Index

Please see full GIPS compliant performance disclosure at the end of this document. **Past performance does not guarantee future results.**

Pyrford's current views

31 December 2016

- Trump's election victory has added further uncertainty to the direction of the US and world economy. Talk of immense stimulus expenditure has spooked bond markets but boosted equities – in the US the major equity indices have hit new highs.
- Trump's 'promises' are vague and uncosted. World trade is already extremely weak and the threat of trade restrictions and/or fresh tariff impositions will do damage.
- 'Brexit' has added additional uncertainty.
- Many equity markets represent poor long-term value as central bank 'printing' has caused markets to re-rate without a commensurate improvement in fundamentals.
- Bond markets also offer poor fundamental value - a consequence of the unorthodox practices of the major central banks. It is possible that a re-rating has now commenced.
- Excessive private and public debt levels, consequent deleveraging (in the household sector), deteriorating demographics and disappointing productivity have led to anaemic growth in developed countries. This looks set to continue.
- The fall in the oil price has negatives and positives. The biggest negative is the decline in capital investment relative to previously announced plans. The oil price is causing budgetary problems in the Middle East and for the first time several members of OPEC are seeking offshore funding.
- Eurozone economic problems remain unsolved. Debt levels in peripheral Europe and continued lack of competitiveness are unsustainable. Italian banks are in a parlous situation. Break-up of the eurozone, in some form, remains our preferred long-term solution.
- Asia ex-Japan offers the best absolute value and most attractive opportunities for growth. Demographics provide a favourable 'window' over the next 20 years.
- Money printing in Japan continues at extreme levels. The Bank of Japan Balance Sheet is now the equivalent of 80% of GDP. Five years ago it was 20%. Poor productivity growth and the most adverse demographics in the developed world provide severe headwinds.
- In general, markets are expensive. Low single-digit returns are probably the best that can be expected on a medium-term outlook.

NOTES AND CHANGES IN ACCOUNTING POLICIES																					
1999	Total and PetroFina merged to form TotalFina																				
2000	TotalFina and Elf Aquitaine merged to form TotalFinaElf																				
2000	Extraordinary loss mainly relates to restructuring costs and early retirement plans following the two mergers.																				
2001/2	Extraordinary gain in both years largely due to significant sale of assets.																				
2003	Extraordinary loss of €1.1bn was largely due to early retirement/restructuring plans and litigation reserves of €245m, due in part to investigations of EU Commission into alleged anticompetitive practices involving certain products sold by Arkema.																				
2004	Extraordinary gain of €2.174bn due largely to asset disposals which were partly counteracted by restructuring costs of €165m and further release of contingency reserves of €150m for the Toulouse-AZF plant explosion.																				
2004	Sanofi-Synthelabo bought Aventis to form Sanofi-Aventis. The TOTAL stake in the combined company was almost halved to 12.65% of the stock after the increase in capital.																				
2004	Arkema formed on October 1, 2004. Regrouped chlorochemicals (formerly part of the base chemicals & polymers sector), intermediates and performance polymers.																				
2005	Launch of Yemen LNG and acquisition of Deer Creek in Canada.																				
2006	Arkema spun-off following shareholder meeting on May 12, 2006.																				
2006	4-for-1 stock split, effective May 18, 2006.																				
2008	Partnership agreement with GDF Suez and Areva for the development of a nuclear power plant in the UAE.																				
	Signed 3 oil and gas agreements in Libya																				
	Patrick de La Chevadiere succeeded Robert Castaigne as CFO in June.																				
2012	Launch of the Ichthys LNG project in Australia (24%).																				
2014	Effective January 1, 2014, Total changed the presentation currency of the Group's Consolidated Financial Statements from Euro to US Dollar.																				
TERMINAL ROE ASSUMPTIONS																					
Sales/Assets	Below peak levels of the past reflecting conservative forecast of oil price.																				
Net Income/Sales	Below peak levels of the past reflecting lower oil price, higher costs of production and lightening tax regimes.																				
Assets/Equity	In line with company's historically conservative financing policy.

Disclosure

Pyrford International Ltd claims compliance with the Global Investment Performance Standards (GIPS®) and has prepared and presented this report in compliance with the GIPS standards. Pyrford International Ltd has been independently verified for the period January 1, 1994 to September 30, 2016 by Grant Thornton UK LLP. The verification report is available upon request.

Verification assesses whether (1) the firm has complied with all the composite construction requirements of the GIPS standards on a firm-wide basis and (2) the firm's policies and procedures are designed to calculate and present performance in compliance with the GIPS standards. Verification does not ensure the accuracy of any specific composite presentation.

Notes to the performance presentation

Pyrford International, a wholly owned subsidiary of the Bank of Montreal, is an investment management firm based in the United Kingdom providing international asset management services for its clients. Pyrford is part of BMO's Wealth Management group which provides wealth management services in North America and the markets in which Pyrford additionally operates: Middle East, UK, Australia and Europe. As at December 31, 2016 Pyrford International Ltd had total assets under management and administration and term investments of US\$9,670m. For the purpose of measuring and presenting investment performance, all discretionary fee paying accounts of Pyrford International Ltd are allocated to a composite and a complete list and description of the composites is available on request. Additional information regarding the firm's policies and procedures for calculating and reporting performance returns is available upon request.

The Pyrford International Ltd "International Equity (Base Currency US\$) composite" comprises all fully discretionary, international equity accounts with a market value greater than US\$10m, a base currency of US\$ and no hedging restrictions. The benchmark for the composite is the MSCI EAFE index. The composite was first created on July 1, 1996. On April 1, 2002 the composite construction criteria were redefined to allow the inclusion of pooled funds, taxable funds and funds of between US\$10 – 15 million on the basis that these do not materially impact the returns generated.

All returns are calculated in US\$ terms on a time-weighted basis based on monthly valuations using modified Dietz. Composites have been asset weighted, where applicable, using the beginning of month market value adjusted for day weighted net inflows.

Where there are more than four accounts in the composite over a full year, dispersion is measured as the asset weighted standard deviation of asset weighted portfolio returns of all accounts in the composite for the full year.

The three-year annualised standard deviation measures the variability of the composite returns over the preceding 36-month period.

The accounts in this composite are unleveraged and derivatives are used solely for currency hedging purposes.

As at December 31, 2016, 7.0% of the composite assets were invested in Malaysia, Thailand and Taiwan which are not included in the MSCI EAFE Index. Historically the composite has invested between 2.4% and 13.0% in these countries.

Performance results are presented gross of management and custodial fees, but net of transaction costs and before taxes (except for non-reclaimable withholding tax). The standard management fee schedule for segregated management is as follows: 0.70% per annum on the first US\$50 million; 0.50% on the next US\$50 million, and thereafter 0.35% per annum.

Net-of-fees performance has been calculated using the highest management fee of 0.70% per annum, as described in the firm's fee schedule shown above.

Returns will be reduced by advisory fees and other expenses, and the effect of these fees will compound over time. As a hypothetical example, if an account generated a 10% return each year for five years, it would appreciate by 61%. If such an account paid a 1% annual fee, the appreciation on the fund would be 54%, or seven percentage points lower after five years.

There have been no significant events within the firm (such as ownership or personnel changes) which have materially impacted the historical investment performance.

REGIONAL TRANSIT ISSUE PAPER

Agenda Item No.	Board Meeting Date	Open/Closed Session	Information/Action Item	Issue Date
2	02/01/17	Retirement	Information	01/17/17

Subject: Introduce the 2016 Actuarial Valuation Completed by Cheiron (ALL). (Bonnel)

ISSUE

Introduce the 2016 Actuarial Valuation Completed by Cheiron (ALL). (Bonnel)

RECOMMENDED ACTION

1. Introduce the 2016 Actuarial Valuation Completed by Cheiron
2. Review the Assumed Rate of Return
3. Review the Assumed Inflation Rate

FISCAL IMPACT

None as a result of this report.

DISCUSSION

Cheiron will present the preliminary results of the 2016 Valuation Study for the Sacramento Regional Transit District's Pension Plans. In order to finalize the Plans' actuarial studies and establish the actuarially determined contribution rate (ADC) for Fiscal Year (FY) 2018, Cheiron staff will review the study results, respond to questions and accept input from the Boards.

Each Retirement Board will be asked to accept its respective valuation study at the Quarterly Retirement Board Meeting on March 15, 2017.

The draft 2016 Valuation Study uses the Pension Plans' current Assumed Rate of Return of 7.50% and Assumed Inflation Rate of 3.15%. Downward modification to either rate would lead to an increase in Sacramento Regional Transit District's contribution rate for Fiscal Year (FY) 2018 while upward modification would decrease the contribution rate.

Acceptance of the 2016 Valuation Study will allow the ADC to be incorporated into Sacramento Regional Transit District's FY 2018 budget.
